

*Pressure Independent Control Valves  
Total Authority*

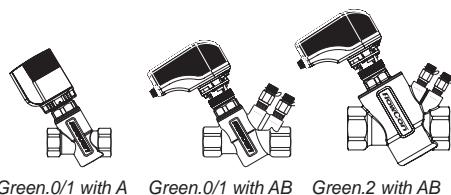

*Dynamic Balancing Valves*

## CERTIFICATES

### PRESSURE INDEPENDENT CONTROL VALVES

#### FlowCon Green

- Pressure independent control valves (PICV)
- Adjustable to 41 different maximum flow rate limits for each control range
- Analog, 3-point floating or 2-position
- Optional feedback
- Optional pressure/temperature plugs
- Range of union end connections available or fixed end female-by-female threaded depending on body
- Sizes: 15-40mm (1/2"-1 1/2")
- Maximum flow rate range: 0.0089-1.29 l/sec (0.141-20.4 GPM)

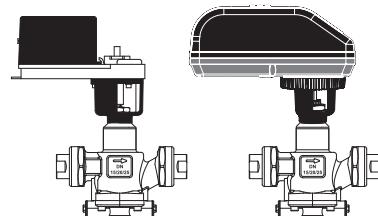

Green.0/1 with A    Green.0/1 with AB    Green.2 with AB

### DYNAMIC SELF-BALANCING MODULATING CONTROL VALVES

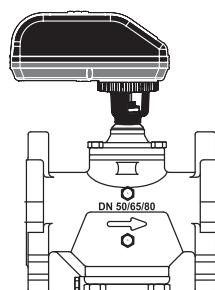

#### FlowCon SM Valve, Union End Connections

- Dynamic Self-balancing modulating control valve, total authority, pressure independent
- Adjustable to 51 different maximum flow rate limits for each size and control range
- Analog or 3-point floating
- Standard feedback
- Standard LED display of position; optional fail safe function
- External programming of all settings, interface with push-buttons and display; optional fail safe function
- Optional BACnet version
- Optional pressure/temperature plugs
- Range of union end connections available
- Sizes: 15-40mm (1/2"-1 1/2")
- Maximum flow rate range: 0.176-2.34 l/sec (2.79-37.1 GPM)

#### FlowCon SM Wafer, Flange Connections

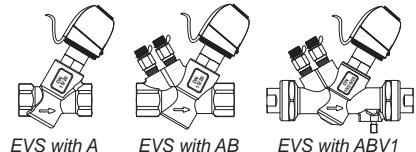

- Dynamic Self-balancing modulating control valve, total authority, pressure independent
- Adjustable to 51 different maximum flow rate limits for each size and control range
- Analog, 3-point floating or 2-position
- Standard feedback
- External programming of all settings, interface with push-buttons and display; optional fail safe function
- Optional BACnet version
- Standard pressure/temperature plugs
- Flange connections
- Sizes: 50-150mm (2"-6")
- Maximum flow rate range: 1.48-29.5 l/sec (23.4-468 GPM)

## AUTOMATICALLY BALANCED TEMPERATURE CONTROL VALVES

### FlowCon EVS

- Dynamic balancing valve with temperature control
- Accessible stainless steel cartridge
- ON/OFF or analog control
- Optional pressure/temperature plugs
- Range of union end connections available or fixed end female-by-female threaded depending on body
- Sizes: 15-25mm (1/2"-1")
- Flow rate range: 0.0210-0.631 l/sec (0.333-10.0 GPM)

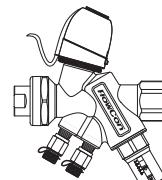

EVS with A

EVS with AB

EVS with ABV1

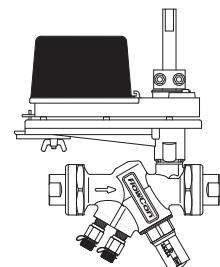

### FlowCon EVC

- Dynamic balancing valve with temperature control
- Accessible, adjustable composite cartridge
- ON/OFF or analog control
- Optional pressure/temperature plugs
- Range of union end connections available on inlet; female threaded outlet
- Sizes: 15mm and 20mm (1/2" and 3/4")
- Flow rate range: 0.0081-0.408 l/sec (0.128-6.46 GPM)

### FlowCon ABM

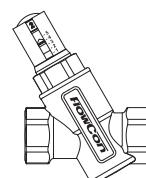

- Electrically actuated two-way control valve with Optimizer® and dynamic balancing
- Accessible, adjustable composite cartridge
- Analog, 3-point floating or 2-position
- Optional pressure/temperature plugs
- Range of union end connections available
- Sizes: 15-40mm (1/2"-1 1/2")
- Flow rate range: 0.0081-1.62 l/sec (0.128-25.6 GPM)

## ADJUSTABLE CARTRIDGE AUTOMATIC BALANCING VALVES

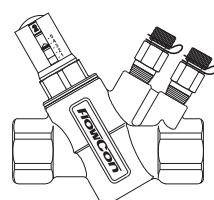

### FlowCon A

- Dynamic balancing valve
- Accessible, adjustable composite cartridge
- Female-by-female threaded
- Sizes: 15-25mm ISO (1/2" and 3/4" NPT)
- Flow rate range: 0.0081-0.408 l/sec (0.128-6.46 GPM)

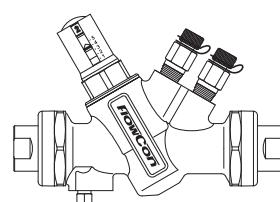

### FlowCon AB

- Dynamic balancing valve
- Accessible, adjustable composite cartridge
- Optional pressure/temperature plugs
- Female-by-female threaded
- Sizes: 15-50mm (1/2"-2")
- Flow rate range: 0.0081-4.48 l/s (0.128-70.9 GPM)

### FlowCon ABV

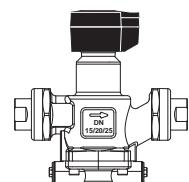

- Dynamic balancing valve with built-in isolation ball valve
- Accessible, adjustable composite cartridge
- Optional pressure/temperature plugs
- Range of union end connections available
- Sizes: 15-40mm (1/2"-1 1/2")
- Flow rate range: 0.0081-1.62 l/sec (0.128-25.6 GPM)

## EXTERNALLY ADJUSTABLE AUTOMATIC BALANCING VALVES

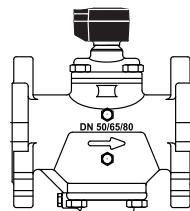

### FlowCon SH Valve, Union End Connections

- Externally adjustable dynamic balancing valve
- Adjustable to 51 different flow rate settings for each size and control range
- Optional pressure/temperature plugs
- Range of union end connections available
- Sizes: 15-40mm (1/2"-1 1/2")
- Flow rate range: 0.075-1.95 l/sec (1.2-30.9 GPM)

### FlowCon SH Wafer, Flange Connections

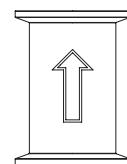

- Externally adjustable dynamic balancing valve
- Adjustable to 51 different flow rate settings for each size and control range
- Standard pressure/temperature plugs
- Flange connections
- Sizes: 50-150mm (2"-6")
- Maximum flow rate range: 1.48-29.5 l/sec (23.4-468 GPM)

## PRE-SET AUTOMATIC BALANCING VALVES 15-80MM

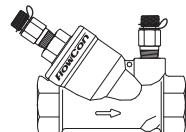

### FlowCon Pure

- Dynamic balancing valve with pre-set built-in flow limiter
- AISI 316(L)
- For Tri-Clover connections
- Sizes: 40mm and 50mm (1 1/2" and 2"), clamp ferrules
- Flow rate range: 0.208-3.15 l/sec (3.3-49.8 GPM)

### FlowCon K

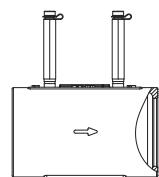

- Dynamic balancing valve
- Accessible, removable pre-set stainless steel cartridge
- Optional pressure/temperature plugs
- Female-by-female threaded connection
- Sizes: 15-80mm (1/2"-3")
- Flow rate range: 0.021-10.1 l/sec (0.333-160 GPM)

## PRE-SET AUTOMATIC BALANCING VALVES 50-800MM

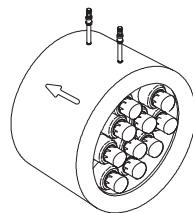

### FlowCon AHU Wafer

- Dynamic balancing valve
- Removable pre-set 3" stainless steel cartridge
- Standard pressure/temperature plugs
- For ANSI B 16.5 150 lb. or 300 lb. Class flanges (compatible with DIN EN1092-1, PN10 and higher)
- Sizes: 50-80mm (2"-3")
- Flow rate range: 0.883-10.1 l/sec (14.0-160 GPM)

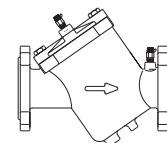

### FlowCon Wafer

- Dynamic balancing valve, multiple cartridges
- Removable pre-set 3" stainless steel cartridges
- Standard pressure/temperature plugs
- For ANSI B 16.5 150 lb. or 300 lb. Class flanges (compatible with DIN EN1092-1, PN25/PN40)
- Sizes: 100-900mm (4"-36")
- Flow rate range: 0.883-1222.2 l/sec (14.0-19400 GPM)

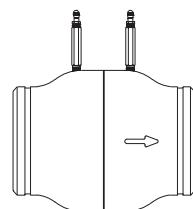

### FlowCon Uni-Flange

- Dynamic balancing valve, multiple cartridges
- Accessible, removable pre-set 2" stainless steel cartridge(s)
- Standard pressure/temperature plugs
- For ANSI B 16.5 150 lb. Class flanges
- Size: 65/80mm (2 1/2"/3")
- Flow rate range: 0.757-21.6 l/sec (12.0-342 GPM)

### FlowCon Grooved End

- Dynamic balancing valve, multiple cartridges
- Removable pre-set 3" stainless steel cartridge(s)
- Standard pressure/temperature plugs
- Grooved end connection
- Sizes: 50-500mm (2"-20")
- Flow rate range: 0.883-429 l/sec (14.0-6800 GPM)

## INSERTS / CARTRIDGES

### FlowCon Green Inserts

- Please see under section 2.

### FlowCon E-JUST Cartridges

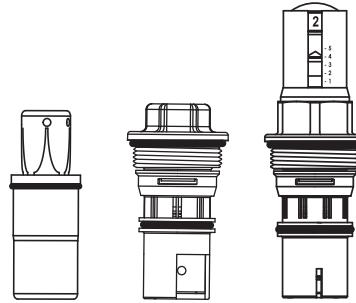

- Externally adjustable composite cartridge, adjustable with a FlowCon key to one of 41 different flow rates
- dP-range: 17-400 kPaD (2.5-58 psid)
- Sizes: 20mm, 40mm and 50mm (3/4", 1 1/2" and 2")
- Flow rate: 0.0278-4.48 l/sec (0.440-70.9 GPM)

### FlowCon Composite Cartridges

- Internally adjustable composite cartridge, adjustable with an allen wrench to one of 8 different flow rates
- dP-range: 15-410 kPaD (2.2-59.5 psid)
- Sizes: 20mm and 40mm (3/4" and 1 1/2")
- Flow rate: 0.0081-1.43 l/sec (0.128-22.7 GPM)

### FlowCon Stainless Steel Cartridges

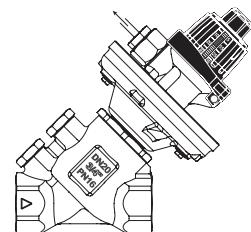

- Factory pre-set stainless steel cartridge, AISI 304
- dP-range: 10-880 kPaD (1-128 psid)
- Sizes: 20mm, 40mm, 50mm and 80mm (3/4", 1 1/2", 2" and 3")
- Flow rate: 0.0210-12.6 l/sec (0.333-200 GPM)

## DIFFERENTIAL PRESSURE CONTROL VALVES

### FlowCon DPCV

- Differential pressure control valve
- Adjustable to 7 different controlled dP settings for each size
- Optional pressure/temperature plugs
- ISO sizes: 15-50mm (1/2"-2")
- Controlled dP rate: 5, 10, 15, 20, 25, 30 and 35 kPaD (0.7, 1.5, 2.2, 2.9, 3.6, 4.4 and 5.1 psid)

## THERMOSTATIC CONTROL VALVE

### FlowCon T-JUST

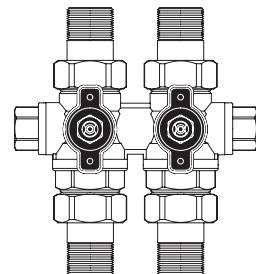

- Thermostatic control valve
- Fits in a range of FlowCon valve bodies
- Size: 20mm (3/4")
- Temperature range: +35°C to +65°C

## BY-PASS UNITS, STRAINERS AND COMMISSIONING METER

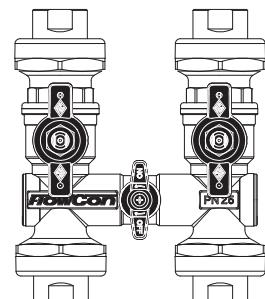

### FlowCon Mini By-Pass Unit

- 3 way mini By-Pass unit
- Forged brass housing
- Nickel plated brass ball valves
- Can be fitted with optional valve bodies supply/return side (A, AB, ABV, EVC or SM 15-40mm (1/2"-1 1/2"))
- Can be fitted with optional strainer and drain possibility on supply side.
- Can be fitted with optional inserts/cartridges on return side (Green, EVS, Composite, E-JUST or Stainless Steel)
- Can be fitted with a range of optional actuators on return side (depending on cartridge selection and valve body)
- Optional side option for drain, air vent or p/t plugs
- ISO Sizes: 4 x 20mm (3/4") male fixed end for DN15 EuroCone  
Multiple union end connections available

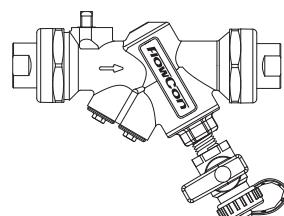

### FlowCon By-Pass Unit

- 3 way By-Pass unit
- Forged brass housing
- Nickel plated brass ball valves
- Can be fitted with optional valve bodies supply/return side (A, AB, ABV, EVC or SM 15-40mm (1/2"-1 1/2"))
- Can be fitted with optional strainer and drain possibility on supply side.
- Can be fitted with optional inserts/cartridges on return side (Green, EVS, Composite, E-JUST or Stainless Steel)
- Can be fitted with a range of optional actuators on return side (depending on cartridge selection and valve body)
- ISO Sizes: 2 x 15mm (1/2") male fixed end + 2 x union end conn.  
2 x 20mm (3/4") male fixed end + 2 x union end conn.  
4 x union end conn. 15/20/25mm (1/2" / 3/4" / 1")
- NPT Sizes: 4 x union end conn. 1/2" / 3/4" / 1"

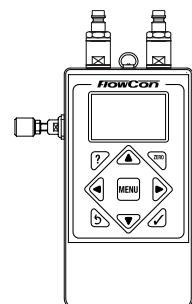

### FlowCon Strainer

- Stainless steel strainer, mesh 60
- Optional pressure/temperature plugs (AB and ABS)
- Integral isolation ball valve (ABS)
- Range of union end connections available (ABS)
- Fixed female threaded ends (A and AB)
- Optional blow-down valve
- Sizes: 15-40mm (1/2"-1 1/2")

### FlowCon Commissioning Meter

- Electronic manometer incl. data on all FlowCon valves
- Measurement range: 0.5-600 kPaD (0.07-87 psid)
- Range of accessories available incl. calculation software
- Selectable pressure units
- Selectable flow units

For other accessory options, please see [www.flowcon.com](http://www.flowcon.com)

BUREAU VERITAS  
Certification

## Certification

Awarded to

**FlowCon International A/S**

*Trafikcenter Allé 17, 4200 Slagelse, Denmark*

Bureau Veritas Certification certify that the Management System of the above organisation has been audited and found to be in accordance with the requirements of the management system standards detailed below.

**STANDARD**

**ISO 9001:2008**

**SCOPE OF SUPPLY**

**Development, sourcing, production, assembling, marketing and sales  
of Dynamic Flow and Temperature Control.**

*Original approval date:* 29-01-2007

*Subject to the continued satisfactory operation of the organisation's Management System, this certificate is valid until: 22-01-2013*

*To check the validity of this certificate please call: (+45) 77 311 000.  
Further clarification regarding the scope of this certificate and the applicability of the system requirements may be obtained by consulting the organisation*

*Certificate Number: DNKFRC10000033A Issue Date: 05-01-2010*

Pressure Independent Control Valves*

# FlowCon Green

## Pressure Independent Control Valves

The FlowCon Green insert is designed as a 3-in-1 solution combining a full stroke modulation control valve, an automatic balancing valve and a differential pressure control valve. This new insert includes an innovative self-adjustment feature, which enables each valve continuously to self-balance. This ensures delivery of precisely the flow rate required by each terminal unit, independent of pressure fluctuations in the hydronic system. Each FlowCon Green insert can also be adjusted to set an accurate maximum flow rate limit to each circuit without stroke limitation.

The FlowCon Green insert can be used in several different applications within heating or cooling such as fan-coil units, air-handler units and other terminal units - wherever dynamic balancing and fully accurate temperature control are required, the FlowCon Green insert will be the ideal choice. It will be the easy solution to both designers, installers and end-users due to its user-friendly complete solution in one body and with one insert.

### Valve Choice

The FlowCon Green insert can be used with the following FlowCon valves:

- **FlowCon A (DN15/20/25)**
- **FlowCon AB (DN15/20/25/32)**
- **FlowCon ABV1 (DN15/20/25)**
- **FlowCon ABV2 (DN25/32/40)**

### 100% Valve Authority

The FlowCon Green is a 100% authority pressure independent flow control valve which instantaneously self-balance at all points of operation, even when there is variance in pressure differential.

#### 100% Authority Pressure Independent

As long as the pressure differential across the valve is within the operating range, the Kv of the valve is variable, being continuously regulated to keep the control

valve in constant authority. The FlowCon Green insert will in other words always use full stroke of the spindle offering the 100% authority for any of its 41 maximum flow settings.

### Features and Benefits

- **3-in-1 combi valve**, modulating control valve, dynamic flow limiter and differential pressure control valve in one body.
- **Differential pressure independent**.
- **Full stroke modulation** at any desing flow.
- **100% authority** for any of the insert's flow setting.
- **Automatic system balancing**, the correct flow rate for each circuit is achieved automatically.
- **Dynamic balancing**, the correct flow rate is maintained as each valve continuously compensates for pressure fluctuations in the system.
- **Field adjustable**, flow rate can be changed on demand without removing the insert from the valve body.
- **Elimination of branch or "partner" balancing valves** which results in fewer total valves used in each project.
- **Easily accessible insert** for flow rate adjustment or maintenance.
- **Accuracy:** Greatest of either  $\pm 10\%$  of controlled flow rate or  $\pm 5\%$  of maximum flow rate.
- **Up to 41 different flow curves** in one and the same insert.
- **Choice of actuator**, electrical actuators: 0(2)-10V modulating, 3-point floating or 2-position, or thermal actuators: 0-10V modulating or ON/OFF.
- **Built-in isolation ball valve** (FlowCon ABV).
- **Pressure/temperature measurement plugs** available for verifying operating differential pressure or checking  $\Delta T$  across the coil (FlowCon AB / ABV).
- **Double union end connection** for ease of installation and wide selection of end fittings (FlowCon ABV) or **fixed end** female-by-female threaded (FlowCon A / AB).

Accuracy: Greatest of either  $\pm 10\%$  of controlled flow rate or  $\pm 5\%$  of maximum flow rate.  
\*at setting 2.6.

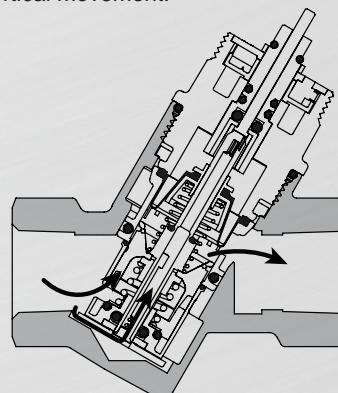

### Principle of Operation

On closer examination of the inner workings of the FlowCon Green, the function is best described as 2 valves in 1. The second valve (V2) regulates the pressure differential across the first valve (V1) by means of a rolling diaphragm element counteracted by a spring. The first valve is a calibrated variable orifice device adjusted by the actuator (similar to a standard modulating control valve).

The diaphragm reacts to the system and regulates the pressure differential across the actuated control valve orifice to maintain its flow rate.

When pre-setting the maximum flow rate, the inlet orifice is changed in size sideways which does not interfere with the length of the stroke. When modulating, the orifice areas are affected by the actuator using the full stroke which results in the fact that the orifice area is changed in size in a vertical movement.

## Hydronic Balance

The insert can be pre-set to limit the working range of the valve which limits the maximum flow rate through the valve. Consequently, hydronic balance is achieved automatically without the use of additional balancing valves.

## Pre-setting the Maximum Flow Rate

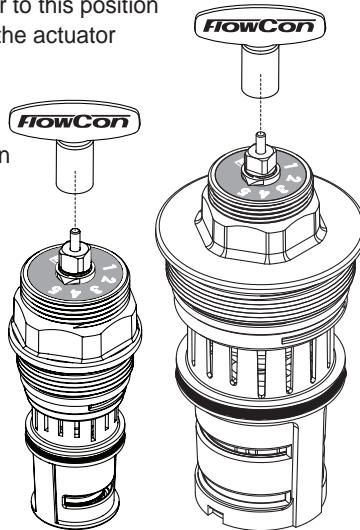

The valve is adjusted to a maximum flow rate limit by setting the scale located on the top of the FlowCon Green insert. The setting indicates one of 41 possible maximum flow rates from e.g. 0.240-1.29 l/sec on FlowCon Green.2 but since the setting is stepless any flow rate in between will be obtainable. The setting is done by means of a special FlowCon key. With the actuator mounted, the pre-setting is "sealed" and the FlowCon Green insert eliminates any flow above the design flow.

For re-adjustment, simply disconnect power from the actuator and re-remove the actuator from the insert. Then dial in the new required maximum flow and re-apply the actuator and connect power again.

## Actuator Mounting and Self-Calibration

When using the actuator, always be sure that power supply is turned off and the actuator is in a fully open position (turn the actuator to this position if required) before fitting the actuator to the insert.

For further information please see the installation and operation instruction manual.

## Technical Data

For further information and part number selection please see FlowCon tech note.

For latest updates please see [www.flowcon.com](http://www.flowcon.com).

Material:	
- Insert:	Glass-reinforced PSU/POM/PPS
- Diaphragm:	Green insert 20mm: EPDM Green insert 40mm: Hydrogenated acrylonitrile-butadiene-rubber
- Internal metal components:	Stainless steel
- O-rings:	EPDM
- Cone:	Green insert 20mm: PPS Green insert 40mm: PPS/EPDM
Maximum close off pressure:	Green insert 20mm: 600 kPaD / 87 psid Green insert 40mm: 400 kPaD / 58 psid
Maximum operational ΔP:	400 kPaD / 58 psid
Shut-off leakage:	ANSI / FCI 70-2 2006 / IEC 60534-4 - Class IV
Flow rate range:	Green insert 20mm: 0.0089-0.308 l/sec / 0.141-4.89 GPM Green insert 40mm: 0.240-1.29 l/sec / 3.81-20.4 GPM

#### Valve:

Material:	Forged brass ASTM CuZn40Pb2
- Body:	ABV: Chemically nickel plated brass ball
- Ball valve:	A: (only available for Green insert 20mm) Fixed female ISO or NPT
End connections:	AB: Fixed female ISO or NPT
	ABV: Union end connection in brass alloy ISO or NPT

Note 1: Stated temperature rating is defined due to no external insert condensation.

## SPECIFICATIONS (continued)

### FlowCon Actuators:

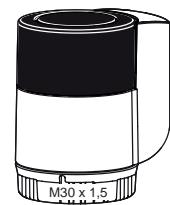

FlowCon Actuator <sup>2</sup>	FT.0.2 <sup>3</sup>	FT.0.3 <sup>3</sup>	FT.0.4 <sup>3</sup>
Supply voltage	24V AC ±20%, 50/60Hz	230V AC ±15%, 50/60Hz	24V AC/DC ±20%, 50/60Hz
Type	Thermal	Thermal	Thermal
Power consumption	3VA	2.5VA	3VA
Control signal	Analog 0(2)-10V, Normally closed	ON/OFF, Normally closed	ON/OFF, Normally closed
Failsafe function	Yes		
Operation time <sup>4</sup>		App. 3.5 minutes	
Ambient temperature		0°C to +50°C	
Protection		IP54 including upside-down, class III	
Cable <sup>5</sup>		Plug-in, 1.0 meter	
Weight		0.18 kg	

Note 2: FlowCon warranty is voided using other actuators than supplied or recommended by FlowCon International.

Note 3: Please note if mounted on FlowCon Green 25-40mm specified leakage rate to be exceeded.

Note 4: Closing time is approximately the double dependent on ambient temperature.

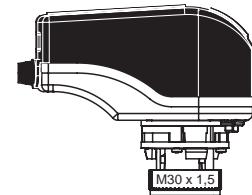

Note 5: The actuator is also available with a cable length of 2, 3, 4, 5, 6, 7, 10 and 15 meter.

Type FT.0.2,  
FT.0.3 and FT.0.4

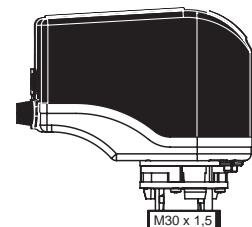

FlowCon Actuator <sup>6</sup>	FN.0.2	FN.0.3	FN.0.4
Supply voltage	24V AC/DC ±10%, 50/60 Hz	110/230V AC ±10%, 50/60 Hz	24V AC/DC ±10%, 50/60 Hz
Motor	Bi-directional synchronous	Bi-directional synchronous	Bi-directional synchronous
Power consumption	5VA	5VA	5VA
Control signal	Analog 0(2)-10V DC	Digital (2-position / 3-point floating)	Digital (2-position / 3-point floating)
Feedback	Yes, 0(2)-10V DC	No	No
Failsafe function	No	No	No
Auto stroke	Yes	No	No
Operation time	50 Hz: 18.5 sec/mm	50 Hz: 18.5 sec/mm	50 Hz: 18.5 sec/mm
Actuation force		225N ±5%	
Ambient temperature		-18°C to +50°C	
Humidity rating		<95% no condensation	
Protection		IP54, class II	
Cable	4 wires 22 AWG halogen free cable, 1 meter	3 wires 22 AWG halogen free cable, 1 meter	3 wires 22 AWG halogen free cable, 1 meter
Weight	0.25 kg	0.25 kg	0.25 kg

Note 6: FlowCon warranty is voided using other actuators than supplied or recommended by FlowCon International.

Type FN.0.X

FlowCon Actuator <sup>7</sup>	FN.1.2	FN.1.4
Supply voltage	24V AC/DC ±10%, 50/60 Hz	
Motor	Bi-directional synchronous	
Power consumption	6VA, 10VA peaks	
Control signal	Analog 0(2)-10V DC	Digital (2-position / 3-point floating)
Feedback	Yes, 0(2)-10V DC	No
Failsafe function	Yes	Yes
Auto stroke	Yes	No
Operation time	50 Hz: 19 sec/mm	50 Hz: 18.5 sec/mm
Actuation force	225N ±5%	
Ambient temperature	-18°C to +50°C	
Humidity rating	<95% no condensation	
Protection	IP54, class II	
Cable	4 wires 22 AWG halogen free cable, 1 meter	
Weight	0.30 kg	

Type FN.1.X

Note 7: FlowCon warranty is voided using other actuators than supplied or recommended by FlowCon International.

## DESCRIPTION

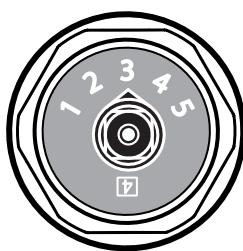

The FlowCon Green serie is pressure independent control valves that are pressure independent, two-way, modulating to accept digital or analog input signals. The valves accept 0(2)-10V, 3-point floating or ON/OFF input signals. Each valve has an adjustable maximum flow rate setting maintaining a full stroke to enable flow limitation and balancing to the coil or zone that the valve is controlling.

For use in fan-coil units, VAV applications and cooling ceilings for activation of the heating or cooling. They are available in three different valve bodies, i.e. FlowCon A, AB or ABV.

0.210	757	3.33	0.308	1110	4.89	1.29	4630	20.4	5.0	

Accuracy: Greatest of either ±10% of controlled flow rate or ±5% of maximum flow rate.

A micrometer setting of 3.4 as illustrated beside corresponds to a maximum flow rate of

0.164 l/sec (Green.0),  
0.257 l/sec (Green.1),  
0.975 l/sec (Green.2).

Use the special designed key (FlowCon part no. ACC0001) for micrometer setting.

## GENERAL SPECIFICATIONS

### 1. PRESSURE INDEPENDENT DYNAMIC CONTROL VALVE FLOWCON GREEN

- 1.1. Contractor shall install the pressure independent dynamic control valves where indicated in drawings.
- 1.2. Valve shall be an electronic, dynamic, modulating, 2-way, pressure independent control device.
- 1.3. Pressure independent dynamic control valve shall accurately control flow, independent of system pressure fluctuation.
- 1.4. Maximum flow setting shall be adjustable to 41 different settings within the range of the valve size.

### 2. VALVE ACTUATOR

#### 2.a. FlowCon FT-actuators

- 2.a.1 Valve actuator housing shall be rated to IP54, including up-side-down mounting.
- 2.a.2 Actuator shall be driven by 24V or 230V AC, and shall depending on actuator choice accept 0(2)-10V DC or ON/OFF control signal.
- 2.a.3 Actuator shall use full stroke and provide full authority.
- 2.a.4 Actuator shall have visible indication of stroke position.
- 2.a.5 Failsafe function shall be available on all version.

OR....

#### 2.b. FlowCon FN-actuators

- 2.b.1 Valve actuator housing shall be rated to IP54.
- 2.b.2 Actuator shall be driven by 24V AC/DC or 110V/230V AC, and shall depending on actuator choice accept 0(2)-10V DC, 3-point floating or 2-position control signal.
- 2.b.3 Actuator shall use full stroke and provide full authority.
- 2.b.4 Actuator shall have visible indication of stroke position.
- 2.b.5 Feedback signal 0(2)-10V DC to the control system shall be standard on modulating version.
- 2.b.6 Optional failsafe function shall be available on 24V AC/DC versions.
- 2.b.7 Optional auto stroke function shall be available on modulating version.
- 2.b.8 Manual override shall be possible without use of tools.

### 3. VALVE HOUSING

#### 3.a. FlowCon A

- 3.a.1 Valve housing shall consist of forged brass ASTM CuZn40Pb2, rated at no less than 2500 kPa static pressure at +120°C.

OR....

#### 3.b. FlowCon AB

- 3.b.1 Valve housing shall consist of forged brass ASTM CuZn40Pb2, rated at no less than 2500 kPa static pressure at +120°C.
- 3.b.2 Pressure/temperature test plugs for verifying accuracy of flow performance shall be available for all valve sizes.

OR....

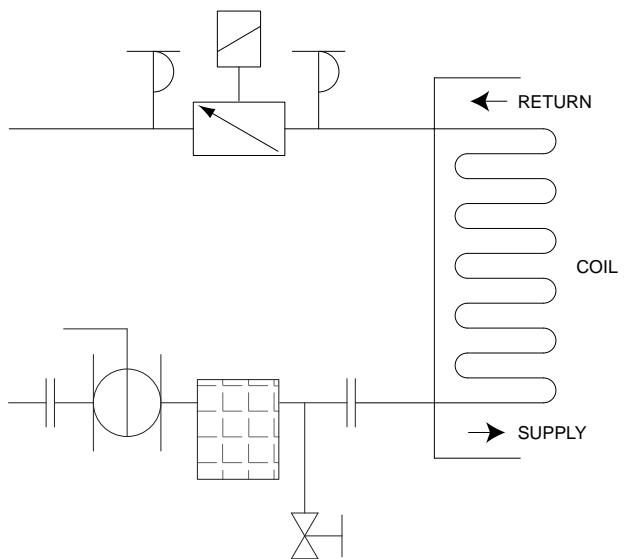

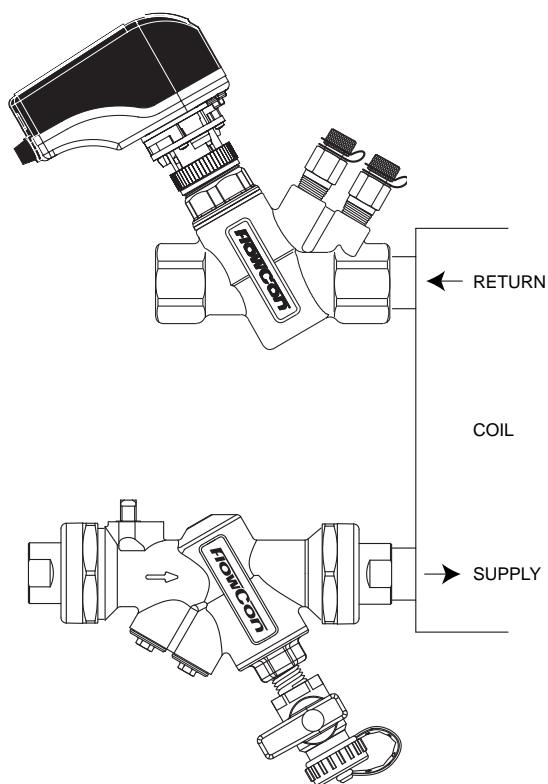

#### 3.c. FlowCon ABV

- 3.c.1 Valve housing shall consist of forged brass ASTM CuZn40Pb2, rated at no less than 2500 kPa static pressure at +120°C.
- 3.c.2 Valve ball shall consist of chemically nickel plated brass (ASTM CuZn40Pb2).
- 3.c.3 Pressure/temperature test plugs for verifying accuracy of flow performance shall be available for all valve sizes.

### 4. FLOW REGULATION UNIT

- 4.1. Flow regulation unit shall consist of glass-reinforced PSU/POM/PPS with an EPDM diaphragm (20mm insert) or a hydrogenated acrylonitrile-butadiene-rubber diaphragm (40mm insert).
- 4.2. Flow regulation unit shall be readily accessible, for change-out or maintenance.  
Flow regulation unit shall be adjustable with the valve in-line and the system in operation.
- 4.3. Flow regulation unit shall be externally adjustable to 1 of 41 different flow rates without limiting the stroke length; shall be available in 2 different kPaD operational ranges for DN15/20/25 and 1 kPaD operational ranges for DN25/32/40; minimum range shall be capable of being activated by minimum 16 kPaD. Further, the flow regulation unit shall be capable of controlling the flow within ±10% of rated flow or ±5% of maximum flow.

## *Dynamic Temperature Control Valve*

A common problem in hydronic systems is choosing the proper control valve while considering the requirements of acceptable authority. Along with this are the problems of determining the characteristics of the circuit necessary to assess the authority of the control valve.

Unstable and inaccurate regulation is often the consequence of over/under sizing a control valve. This is due to the fact that it is impossible to select a traditional control valve with a coefficient which optimally fits the given design parameters. Often the problem is exaggerated by pressure drop fluctuations across the control valve, which occur at varying loads in the system.

The FlowCon SM valve is a dynamic control valve which means the valve automatically keeps a constant differential pressure across the internal controlling orifice of the valve. Consequently, pressure drop fluctuations across the FlowCon SM will not affect the set flow through the valve. FlowCon SM can be set to limit the maximum design flow, which makes over-sizing control valves obsolete. Extensive calculations and assessments of the authority of the selected valve are eliminated. The dynamic flow characteristics keep the FlowCon SM in constant authority and automatically balanced, eliminating the requirement for a separate balancing valve in the circuit.

FlowCon SM dynamic temperature control valves are designed as an automatic temperature control for coils and AHUs; as a two-way regulation valve in HVAC installation such as radiator heating circuit or inventing heat systems; as a control valve for heat exchangers in heating systems to control floor heating circuits or other secondary heating circuits and as a control valve in hot water tank systems.

It is designed to control the rate of fluid flow to a specific terminal unit or coil. The FlowCon SM includes an innovative self adjustment feature which enables each valve continuously to self balance. This ensures delivery of precisely the flow rate required by each terminal unit, independent of pressure fluctuations in the hydronic system. Each FlowCon SM can also be adjusted to set an accurate maximum flow rate limit to each circuit.

#### Features and Benefits

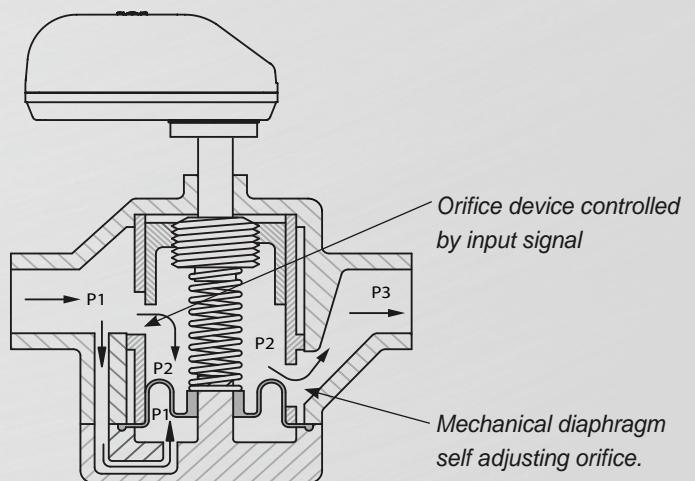

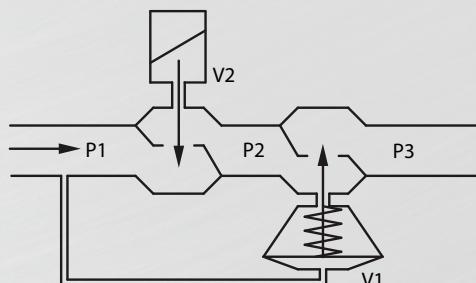

- **Pressure independent flow control.**
- **Total valve authority.**
- **User friendly** touch panel on actuator for selection of flow, control input etc. (optional on SM DN15-40).
- **Save time and labor;** installation and adjustment of balancing valves are eliminated.
- **K<sub>v</sub> sizing calculations and problems are eliminated;** each valve is adjustable to 51 different maximum flow rate settings.
- **Feedback signal** provides information of current valve position, which can be converted into flow rate.
- **Optional failsafe power storage feature** which opens or closes the valve in case external power supply fails.
- **Continuously displaying** flow rate - and scrolling other actuator information (optional on SM DN15-40).
- **Actuator** is suitable for electrical modulating, 3-point-floating or 2 position signals.
- **Pressure/temperature measurement plugs** for verifying operating pressure differential range or checking  $\Delta T$  across the coil.
- **Double union end or flange connection** for ease of installation.

#### Principle of Operation

On closer examination of the inner workings of the FlowCon SM, the function is best described as 2 valves in 1. The first valve (V1) regulates the pressure differential across the second valve (V2) by means of a rolling diaphragm counteracted by a spring. The second valve is a calibrated variable orifice device adjusted by the actuator (similar to a standard modulating control valve). The diaphragm reacts to the system and regulates the pressure differential across the actuated control valve orifice to maintain its flow rate.

#### System Layout Comparison and Valve Authority

The FlowCon SM is a 100% authority pressure independent flow control valve which instantaneously self-balance at all points of operation, even when there is variance in pressure differential. As long as the pressure differential across the valve is within the operating range, the  $K_v$  of the valve is variable, being continuously regulated to keep the control valve in constant authority.

### Hydronic Balance

The actuator can be pre-set to limit the working range of the valve which limits the maximum flow rate through the valve. Consequently, hydronic balance is achieved automatically without the use of additional balancing valves.

### User friendly programmable actuator

All SM-valves can be fitted with the new state-of-the-art actuators which both in design and user-friendliness are unique. On the touch panel on the actuator all features are selected. It is possible to select 51 different flow rate maximums per valve. Both control input signal and feedback signal are also selected on the touch panel. Input signal can be modulating, 3-point-floating or 2 position and feedback signal can be "automatic", 0(2)-10V or 4-20mA.

The control signals i.e. input signals and feedback automatically adapt to the pre-set working range of the valve. This means that maximum signal is equal to the maximum pre-set design flow limit. The digital control system is allowed to work throughout the full range of the signal independent of the working range. Further, the valve can be selected to operate either in NC-mode (normally closed) so that the valve opens with an increasing signal or in NO-mode (normally open) so that it closes with an increasing signal.

### Failsafe

The failsafe option will move the valve to safety position (standard is failsafe closed) during power failure utilized by a rechargeable battery.

### Technical Data

For further information and part number selection please see FlowCon tech note.

*Dynamic Self Balancing Control Valve*

## SPECIFICATIONS

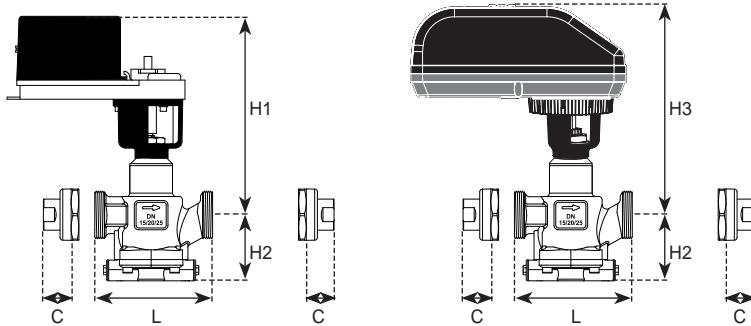

Pressure rating:	2500 kPa / 360 psi
Temperature rating, media:	-20°C to +120°C / -4°F to +248°F
Temperature rating, ambient:	-10°C to +50°C / +14°F to +122°F
Material:	
- Diaphragm:	Hydrogenated acrylonitrile-butadiene-rubber
- Body:	Forged brass ASTM CuZn40Pb2
- Union end connections:	Brass alloy ISO or NPT
- O-rings:	EPDM
- Internal metal components:	Stainless steel
Body tappings :	1/4" NPT
Maximum close off pressure:	600 kPa / 87 psi
Maximum operational ΔP:	320 kPaD / 46 psid
Flow rate range:	0.176-2.34 l/sec / 2.78-37.1 GPM

## MODEL NUMBER SELECTION

Insert body size:  
1=15-25mm, 1/2"-1" 2=25-40mm, 1"-1 1/2"

Insert dP control range:  
1=standard

Insert p/t plug requirements:  
B=pressure/temperature plugs P=taps plugged (standard)

Insert actuator selection:  
1=brush/basic (standard, SM.0.0.0.1) 3=display (SM.0.0.0.3) 4=display and failsafe (SM.0.0.0.4)  
5=display and BACnet (SM.0.0.0.5) 6=display, BACnet and failsafe (SM.0.0.0.6)

Insert inlet x outlet union end connections:

Body size	Female threaded	Male tressed	Sweat
15-25mm, 1/2"-1"	E=15mm=1/2" F=20mm=3/4"	H=15mm=1/2" I=20mm=3/4" J=25mm=1"	K=15mm L=18mm M=22mm
25-40mm, 1"-1 1/2"	G=25mm=1" P=32mm=1 1/4" Q=40mm=1 1/2"	J=25mm=1" S=32mm=1 1/4" T=40mm=1 1/2"	N=28mm W=35mm

Insert connections standard:  
I=ISO N=NPT

Example: SM.2.1.B.1.Q.Q.I=SM 25-40mm body with p/t plugs, standard brush basic actuator and 40mm ISO female threaded end connections.

## ACTUATOR SPECIFICATIONS<sup>3</sup>

### FlowCon SM.0.0.0.1 actuator

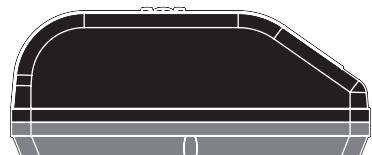

Supply voltage:	24V AC or 30V DC
Power consumption:	20VA @ 26V AC
Frequency:	50/60 HZ
Control input:	2-10V DC, 4-20mA or 3-point floating
Feedback position output:	2-10V DC or 4-20mA
Turn time:	150 seconds (from closed to fully open valve)
Electrical connection:	15mm grommet connection
Direction of rotation:	Bi-directional
Humidity rating:	Fully coated electronic board
Housing material:	Aluminium
Housing insulation:	IP42

### FlowCon SM.0.0.0.3, SM.0.0.0.4,

### SM.0.0.0.5 (with BACnet) and SM.0.0.0.6 (with BACnet and failsafe) actuators

Supply voltage:	24V AC/DC
Power consumption:	12VA
Frequency:	50/60 HZ
Control input:	0-10V DC, 2-10V DC, 0-20mA, 4-20mA, 2-position or 3-point floating
Feedback position output:	Automatic match of control input, 0-10V DC, 2-10V DC or 4-20mA
Turn time:	190 seconds (from closed to fully open valve)
Electrical connection:	5 wires 22 AWG halogen free cable, 1 meter
Direction of rotation:	For BACnet versions another 3 wires 22 AWG halogen free cable, 1 meter
Humidity rating:	Bi-directional
Housing material:	5 to 95% RH non condensing
Housing insulation:	UL94 V0-rated plastic
Programming:	IP54 including up-side-down mounting
Calibration:	External programming of all settings, interface of buttons and display
Valve - actuator coupling:	Automatic calibration at startup
BACnet device profile:	Easy snap coupling
BACnet protocol:	BACnet Application Specific Controller (B-ASC) type server
BACnet baud rates supported:	BACnet Master Slave/Token passing (MS/TP)
BACnet services (BIBBS) supported:	9600, 19200, 38400 and 76800
	DS-RP-B, DS-WP-B, DM-DDB-B, DM-DOB-B and DM-DCC-B.

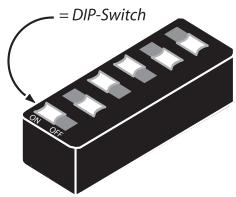

Note 3: FlowCon warranty is voided using other actuators than supplied or recommended by FlowCon International A/S.

Example illustrated above:

**ON-OFF-ON-ON-OFF-OFF**

which gives a max flow of:

**SM.1.1** - 0.685 l/sec and

**SM.2.1** - 2.34 l/sec

(rotation 6.0).

Accuracy: Greatest of either  $\pm 5\%$  of controlled flow rate or  $\pm 2\%$  of maximum flow rate.

## GENERAL DESCRIPTION

The SM Series are self balancing dynamic flow control valves that are pressure independent, two-way, modulating to accept digital or analog input signals. The valves accept 2-10V DC, 4-20mA or digital 3-point floating input signals. Each valve has an adjustable maximum flow rate setting to enable flow limitation and balancing to the coils or zones that the valves are controlling.

All SM actuators are microprocessor based with a self-calibrating feature.

The valves are all designed for double union piping connection.

They are available in two different valve bodies with end connections from 15mm-40mm.

## GENERAL SPECIFICATIONS

### 1. PRESSURE INDEPENDENT DYNAMIC CONTROL VALVES - FLOWCON SM

- 1.1. Contractor shall install pressure independent dynamic control valves where indicated in drawings.
- 1.2. Valve shall be an electronic, dynamic, modulating, 2-way pressure independent control device.
- 1.3. Pressure independent dynamic control valve shall accurately control flow, independent of system pressure fluctuation.
- 1.4. Maximum flow setting shall be adjustable to 51 different settings within the range of the valve size.

### 2.a. VALVE ACTUATOR / FLOWCON SM.0.0.1

- 2.a.1. Valve actuator housing shall be rated to IP42.
- 2.a.2. Actuator shall be driven by a 24V AC or 30V DC motor, and shall accept 2-10V DC, 4-20mA or 3-point floating electric signal and shall include resistor to facilitate any of these signals.
- 2.a.3. Actuator shall be capable of providing 4-20mA or 2-10V DC feedback signal to the control system.
- 2.a.4. External LED read-out of current valve position and maximum valve position setting shall be available.

OR...

### 2.b. VALVE ACTUATOR / FLOWCON SM.0.0.3, SM.0.0.4, SM.0.0.5 and SM.0.0.6

- 2.b.1. Valve and actuator coupling shall have snap couplings for fast mounting and demounting.
- 2.b.2. Actuator housing shall be rated to IP54 including up-side-down mounting.
- 2.b.3. Actuator shall be driven by a 24V AC/DC motor and shall accept 0-10V DC, 2-10V DC, 0-20mA, 4-20mA, 2-position or 3-point floating electric input signal.
- 2.b.4. Actuator shall be capable of providing same as input, 4-20mA, 0-10V DC or 2-10V DC feedback signal to the control system.
- 2.b.5. Automatic calibration of valve position shall be standard.
- 2.b.6. Actuator shall include display and buttons for external programming of all settings.
- 2.b.7. External display of current valve flow, maximum valve flow, input signal, feedback signal and operational direction shall be standard.
- 2.b.8. Optional fail safe system to power valve to either open (max. setting) or closed position from any position in case of power failure shall be available.
- 2.b.9. Optional BACnet connection for remote setting and control of actuator shall be available.

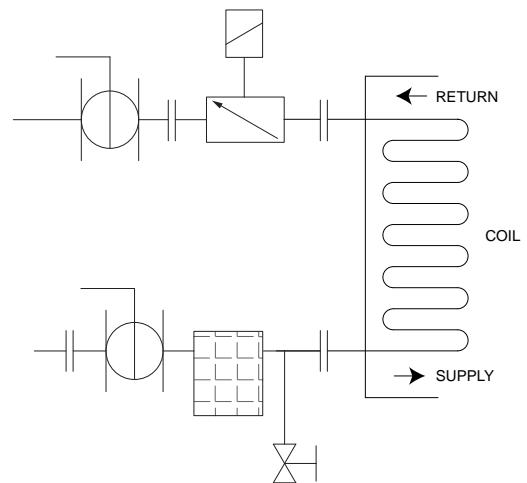

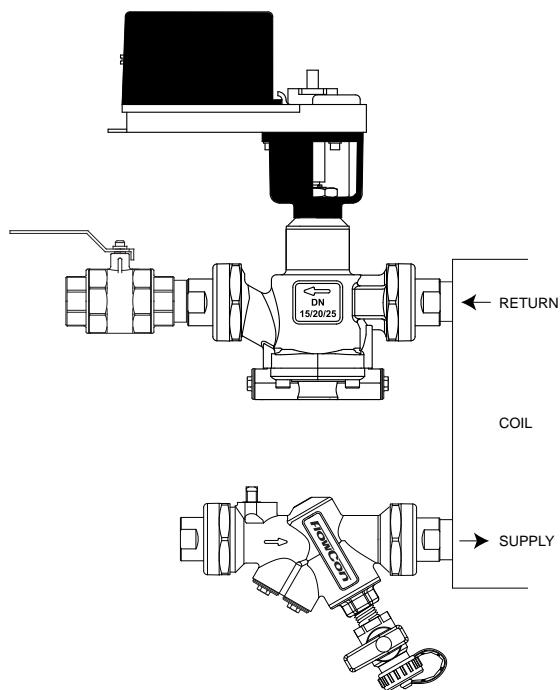

### 3. VALVE HOUSING

- 3.1. Valve housing shall consist of forged brass ASTM CuZn40Pb2, rated at no less than 2500 kPa static pressure and +120°C.
- 3.2. Valve housing shall be permanently marked to show direction of flow.
- 3.3. Valve housing shall be double union end constructed with a range of pipe connections available for the appropriate pipe size.
- 3.4. Optional dual pressure/temperature test plugs for verifying accuracy of flow performance shall be available for all valve sizes.

### 4. FLOW REGULATOR / AUTOMATIC BALANCING UNIT

- 4.1. Flow regulation unit shall be manufactured of stainless steel and hydrogenated acrylonitrile-butadiene-rubber and shall be capable of controlling flow within ±5% rated flow rate or ±2% of maximum flow rate.
- 4.2. Flow regulation unit shall be accessible for change-out maintenance.

# FlowCon SM 50-150mm

***Dynamic Self Balancing Control Valve***

## SPECIFICATIONS

Pressure rating:	4000 kPa / 580 psi
Temperature rating, media:	-20°C to +120°C / -4°F to +248°F
Temperature rating, ambient:	-10°C to +50°C / +14°F to +122°F
Material:	
- Diaphragm:	Hydrogenated acrylonitrile-butadiene-rubber
- Body:	Ductile iron ASTM A536-65T, Class 60-45-18
- O-rings:	EPDM
- Internal metal components:	Stainless steel
End connection:	Universal flange connections which can be used with both ISO and ANSI Flanges and mounting kits are not supplied by FlowCon <sup>1</sup>
Body tappings:	1/4" ISO
Maximum close off pressure:	600 kPa / 87 psi
Maximum operational ΔP:	400 kPaD / 58 psid
Flow rate range:	1.48-29.5 l/sec / 23.4-468 GPM

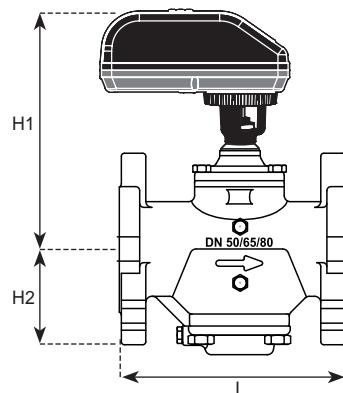

Note1: 2x16mm studs and 4x16mm bolts with nuts are supplied with SM.3.x.x.x.

## DIMENSIONS AND WEIGHTS (NOMINAL) (measured in mm unless noted)

Model no.	Valve size	L	H1	H2	Weight <sup>2</sup> (kgs.)
SM.3.X	50	224	252	95	15.0 <sup>3</sup>
	65				
	80				
SM.4.X	80	320	292	135	31.0
	100				32.0 (SM.4.3)
SM.5.X	125	422	343	180	61.0
	150				

Note 2: Weight includes valve and actuator.

Note 3: Including studs, bolts and nuts provided with valve.

## MODEL NUMBER SELECTION<sup>4</sup>

Insert valve body size:

3=50-80mm, 2"-3" 4=80-100mm, 3"-4" 5=125-150mm, 5"-6"

Insert dP control range:

0=35-400 kPaD, 5.1-58 psid (SM.3 only)

1=35-400 kPaD, 5.1-58 psid

2=60/80-400 kPaD, 8.7/11.6-58 psid

3=60-400 kPaD, 8.7-58 psid (SM.4 only)

Insert p/t plug requirements:

B=p/t plugs (standard)

Insert actuator selection:

3=display (SM.0.0.0.3) 4=display and failsafe (SM.0.0.0.4) 5=display and BACnet (SM.0.0.0.5) 6=display, BACnet and failsafe (SM.0.0.0.6)

Example: SM.3.1.B.4=SM 2"-3" body for 5.1-58 psid with p/t plugs and failsafe actuator.

Note 4: Model no. and pressure range are indicated on label affixed to body.

## ACTUATOR SPECIFICATIONS<sup>5</sup>

### FlowCon SM.0.0.0.3, SM.0.0.0.4,

### SM.0.0.0.5 (with BACnet) and SM.0.0.0.6 (with BACnet) actuators

Supply voltage: 24V AC/DC

Power consumption: 12VA

Frequency: 50/60 HZ

Control input: 0-10V DC, 2-10V DC, 0-20mA, 4-20mA, 2-position or 3-point floating

Feedback position output: Automatic match of control input, 0-10V DC, 2-10V DC or 4-20mA

Turn time: 190 seconds (from closed to fully open valve)

Electrical connection: 5 wires 22 AWG halogen free cable, 1 meter

For BACnet versions another 3 wires 22 AWG halogen free cable, 1 meter

Direction of rotation: Bi-directional

Humidity rating: 5 to 95% RH non condensing

Housing material: UL94 V0-rated plastic

Housing insulation: IP54 including up-side-down mounting

Programming: External programming of all settings, interface of buttons and display

Calibration: Automatic calibration at startup

Valve - actuator coupling: Easy snap coupling

BACnet device profile: BACnet Application Specific Controller (B-ASC) type server

BACnet protocol: BACnet Master Slave/Token passing (MS/TP)

BACnet baud rates supported: 9600, 19200, 38400 and 76800

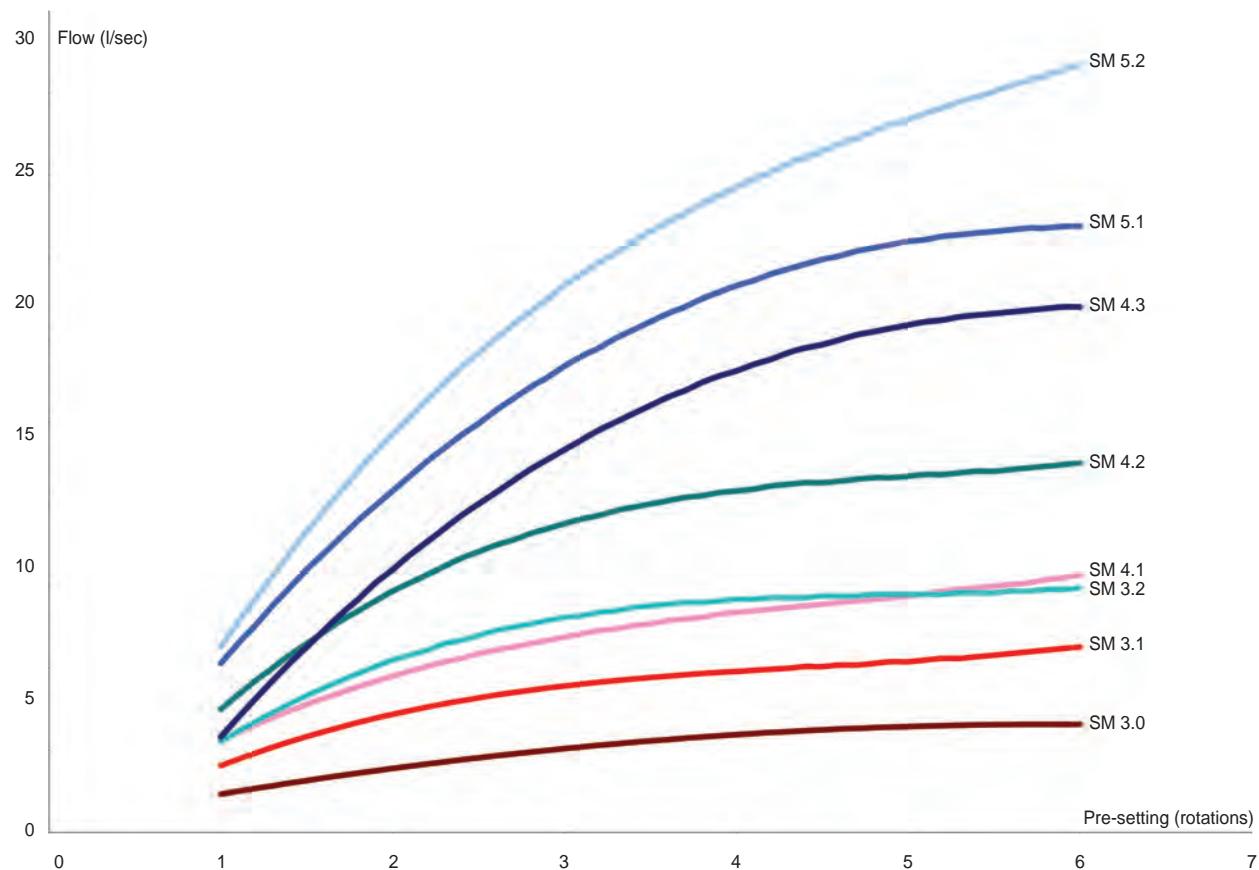

BACnet services (BIBBS) supported: DS-RP-B, DS-WP-B, DM-DDB-B, DM-DOB-B and DM-DCC-B.

Note 5: FlowCon warranty is voided using other actuators than supplied or recommended by FlowCon International A/S.

Note 6: Type 02 and 35/36/37 (loose plate flange with welding neck / pressed collar with long neck / pressed collar) or Type 04 and 34 (loose plate flange with weld-neck collar) or Type 11 with flange facing A/B (weld-neck flange with flat face or raised face).

Note 7: Type 12 with flange facing A/B (hubbed slip-on flange with flat face or raised face).

## GENERAL DESCRIPTION

The SM Series are self balancing dynamic flow control valves that are pressure independent, two-way, modulating to accept digital or analog input signals. The valves accept 2-10V DC, 4-20mA, digital 2-position or digital 3-point floating input signals. Each valve has an adjustable maximum flow rate setting to enable flow limitation and balancing to the coils or zones that the valves are controlling.

All SM actuators are microprocessor based with a self-calibrating feature.

The SM valve is of the wafer style for fitting between flanges. They are available in three different valve bodies for flange connections.

## GENERAL SPECIFICATIONS

### 1. PRESSURE INDEPENDENT DYNAMIC CONTROL VALVE FLOWCON SM

- 1.1. Contractor shall install dynamic control valves where indicated in drawings.
- 1.2. Valve shall be an electronic, dynamic, modulating, 2-way pressure independent control device.
- 1.3. Pressure independent dynamic control valve shall accurately control flow, independent of system pressure fluctuation.
- 1.4. Maximum flow setting shall be adjustable to 51 different settings within the range of the valve size.
- 1.5. Valve and actuator coupling shall have snap couplings for fast mounting and demounting.

### 2. VALVE ACTUATOR

- 2.1. Valve and actuator coupling shall have snap couplings for fast mounting and demounting.
- 2.2. Actuator housing shall be rated to IP54 including up-side-down mounting.
- 2.3. Actuator shall be driven by a 24V AC/DC motor and shall accept 0-10V DC, 2-10V DC, 0-20mA, 4-20mA, 2-position or 3-point floating electric input signal.
- 2.4. Actuator shall be capable of providing same as input, 4-20mA, 0-10V DC or 2-10V DC feedback signal to the control system.
- 2.5. Automatic calibration of valve position shall be standard.
- 2.6. Actuator shall include display and buttons for external programming of all settings.
- 2.7. External display of current valve flow, maximum valve flow, input signal, feedback signal and operational direction shall be standard.
- 2.8. Optional fail safe system to power valve to either open (max. setting) or closed position from any position in case of power failure shall be available.
- 2.9. Optional BACnet connection for remote setting and control of actuator shall be available.

continues...

## GENERAL SPECIFICATIONS (continued)

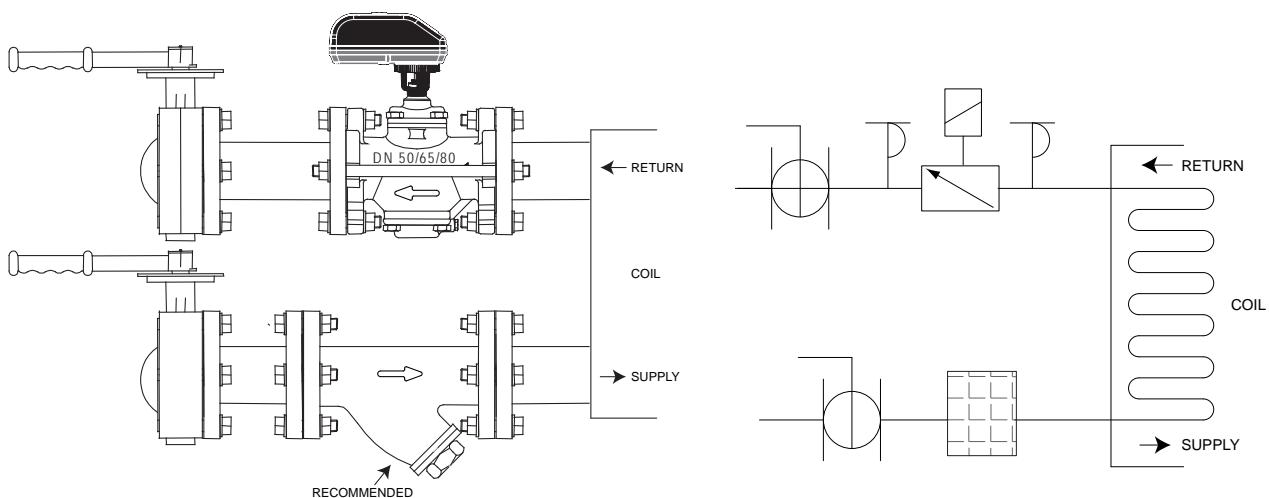

### 3. VALVE HOUSING

- 3.1. Valve housing shall consist of ductile iron ASTM A536-65T, Class 60-45-18 rated at no less than 4000 kPa static pressure and +120°C.
- 3.2. Valve housing shall be permanently marked to show direction of flow.
- 3.3. Valve housing shall be for installation between flanges.
- 3.4. Dual pressure/temperature test plugs for verifying accuracy of flow performance shall be provided for all valve sizes.
- 3.5. Identification tags shall be available for all valves; tags shall be indelibly marked with part number, production date and pressure differential range. Tags shall be of aluminum and in size 50mm x 25mm.

### 4. FLOW REGULATOR / AUTOMATIC BALANCING UNIT

- 4.1. Flow regulation unit shall be manufactured of stainless steel and hydrogenated acrylonitrile-butadiene-rubber and shall be capable of controlling flow within  $\pm 5\%$  rated flow rate or  $\pm 2\%$  of maximum flow rate.
- 4.2. Flow regulation unit shall be accessible for change-out or maintenance.

## APPLICATION AND SCHEMATIC EXAMPLE

# FlowCon EVS / EVC / ABM

*Balanced Temperature Control Valves*

# FlowCon EVS, EVC and ABM

*Temperature Control and Automatic Balancing combined in a Single Unit for Total Flow Control*

The FlowCon EVS/EVC valves are particularly designed to give the optimal indoor comfort. The valves will provide ON/OFF or analog temperature control and self balancing flow control for use with fan coil units in air-conditioning and cooling ceilings or as zone valve in heating systems.

For larger applications the "sister model" FlowCon ABM can be used. The ABM valve is suitable for applications in connection with building automation systems where central control of the comfort in the building is required. This model combines an electrically actuated ball valve in series with an automatic flow limiting cartridge.

The flow regulator is different within the three types, i.e. FlowCon EVS is regulated by a stainless steel cartridge and the FlowCon EVC and ABM by an adjustable composite cartridge.

The EVS-insert is designed for use in connection with the valve bodies FlowCon A, AB or ABV1. The EVC valve has its own unique valve house. The ABM valve is designed for use with the FlowCon ABV-bodies with modification to the ball valve. The control signal for either actuator can be provided by for instance a thermostat.

## Features and Benefits

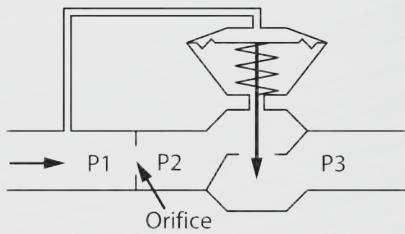

- **Automatic balancing**, the correct flow rate for each circuit is achieved automatically.
- **Dynamic balancing**, the correct flow rate is maintained as each valve compensates for pressure fluctuations in the system.
- **Actuator** selection, ON/OFF or analog, normally closed.
- **Easily accessible cartridge** for flow rate adjustment or maintenance.
- **Pressure/temperature measurement plugs** for verifying operating pressure differential range or checking  $\Delta T$  across the coil (not available on FlowCon A-bodies).
- **Union end connection** for ease of installation and wide selection of end fittings (FlowCon ABV, EVC and ABM) or **fixed female threaded ends** (FlowCon A and AB).

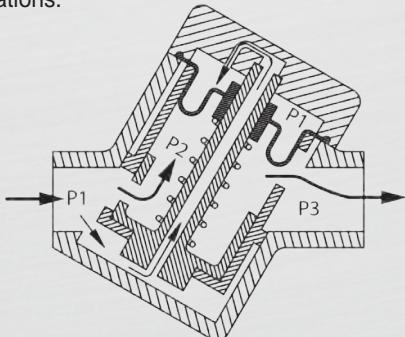

#### Principle of Cartridge Operation

##### - FlowCon EVC and ABM

The FlowCon EVC and ABM valves utilize an adjustable composite cartridge. The internal adjustable cartridge is adjusted by means of a 6mm Hex key to one of 8 different flow rates. The external adjustable cartridge, called the FlowCon E-JUST, is operated by means of a special FlowCon key, and flow rate is chosen from 41 different possibilities.

For the FlowCon EVC and ABM, the principle of operation is shown above and the principle of construction is shown below. P1 and P3 are system pressures,  $P1-P3$  is the total pressure drop across the valve. P2 is set by the diaphragm acting in reaction to P1 in the upper diaphragm chamber. Interacting with the spring,  $P1-P2$  remains constant, keeping a constant  $\Delta P$  across the orifice areas. The result is a constant flow rate through the valve, independent of pressure fluctuations.

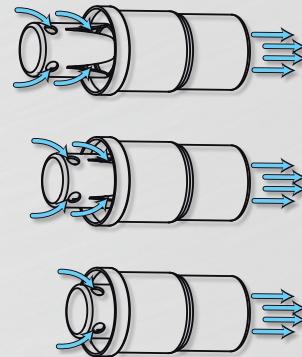

Below its pressure differential range, the valve acts as a fixed orifice. This allows the temperature control part of the valve to operate with valve authority up to the set flow rate maximum.

In case the differential pressure is higher than the defined max.  $\Delta P$  for the cartridge, the diaphragm may be damaged.

#### Principle of Cartridge Operation

##### - FlowCon EVS

The FlowCon EVS valve utilizes a factory pre-set stainless steel cartridge. Below its pressure differential range it acts as a fixed orifice.

Within operating pressure differential range, the effective open orifice area of the cartridge is automatically adjusted to the point where the specified flow rate will be delivered (as the pressure differential increases, the open area closes and as it decreases, the area opens).

When the pressure differential range is exceeded, the valve again becomes a fixed orifice device. This ensures that no part of the system is starved or shut down.

## Equal Percentage Control Characteristic

The patented parabolic Optimizer® in the FlowCon ABM is unique from any other in the industry because it is actually press-fitted into the ball, resulting in less wear and higher close-off pressure. Optimizer® means equal percentage flow characteristic and linear heat transfer, i.e. the heat output at the coil is linear when compared to the open area of the valve.

The physical design of the Optimizer® means that once it is press-fitted into the ball, it cannot be forced out because the back side of the Optimizer® is too large to be forced through the ball's port.

As pressure increases behind the Optimizer® insert, it compresses even further into the ball's port, making a tight fit even tighter for guaranteed protection against leak-by.

The Optimizer® is able to modulate in systems where the differential pressure is over 1100 kPaD without influencing life or performance of the Optimizer®, which is quite unique compared with other similar solutions.

*Illustration of Optimizer® movement.*

## Technical Data

For further information and part number selection pls. see FlowCon tech note and the catalogue: FlowCon Inserts and Cartridges. For latest updates please see [www.flowcon.com](http://www.flowcon.com).

*Plug-in Insert for Temperature Control  
of Automatic Balancing Valve*

## SPECIFICATIONS

### Insert:

Pressure rating:	1600 kPa / 232 psi
Temperature rating, media <sup>1</sup> :	-20°C to +120°C / -4°F to +248°F
Temperature rating, ambient:	0°C to +60°C / +32°F to +140°F
Material:	
- Cartridge:	Stainless steel AISI type 304
- Body:	Brass ASTM B584 and polyoxymethylene
- Spring:	Stainless steel type 17-7
- Spindel:	Brass
- Seat plug and o-rings:	EPDM
Maximum close off pressure:	400 kPa / 58 psi
Shut off leakage:	Tight
Flow rate range:	0.0210-0.631 l/sec

### Valve:

Material:	Forged brass ASTM CuZn40Pb2
- Body:	ABV: Chemically nickel plated brass ball
- Ball valve:	A: Female ISO or NPT
End Connections:	AB: Female ISO or NPT
	ABV: Union end connections in brass alloy ISO or NPT

Note 1: Stated temperature rating is defined due to no external spindle condensation.

		20						22	20		
		25		-				39	22		
	EV.0.3 EV.0.4 EV.0.5 EV.1.3 EV.1.4	15	20	122	N/A	106	22	25	20	1.10	2.35
		20						22	20		
		25		-				39	22		

Note 3: Add end connection length to body length.

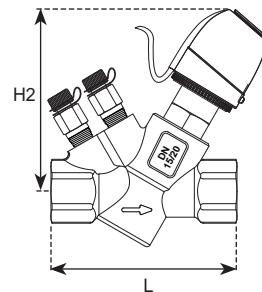

Note 4: The Kv<sub>s</sub>-value of 2.35 m<sup>3</sup>/h, which corresponds to the temperature control and valve housing, will provide an additional pressure drop.

This additional pressure drop will provide an offset of pressure range, which needs to be added into the control range for the Flow Control Cartridge.

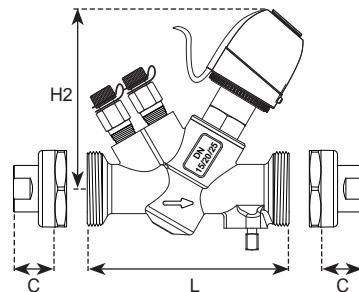

This offset is depended off the flow rate for the selected cartridge. See the diagram and example on page 7.

Accuracy: ±5% of controlled flow rate.

## ACCESSORIES

- P/t plugs: 2 x ACC00101
- Plugs and gaskets: 2 x ACC1B03000
- Spare part, black composite part: EVS.0.0.1.

## GENERAL DESCRIPTION

The standard actuators available for the FlowCon EVS valve are thermal actuators that operate ON/OFF on 24V AC/DC, 120V AC and 230V AC/DC or modulating on 24V AC respectively. ON/OFF actuators are available with end switches which can be used for controlling the fan in priority to the open position of the valve.

The EVS-insert with stainless steel cartridge will in connection with the FlowCon A, AB and ABV1 valve bodies provide temperature control and dynamic balancing for use in cooling ceilings, fan coil units in air-condition or as zone valve in heating systems.

## GENERAL SPECIFICATIONS

### 1. AUTOMATIC BALANCING AND TEMPERATURE CONTROL VALVES

#### - FLOWCON EVS + FLOWCON A, AB or ABV1.

- 1.1. Contractor shall install balancing / temperature valves where indicated in drawings.
- 1.2. The flow limiting device shall be available as a plug-in device for an inline valve housing.

### 2. VALVE ACTUATOR

- 2.1. Actuator shall provide a visual indication of the valve position.
- 2.2. The valve shall be closing when the actuator is not powered.
- 2.3. The valve shall withstand a shut off pressure of at least 400 kPa without allowing internal leakage.
- 2.4. The seat plug shall be manufactured of EPDM rubber.
- 2.5. The packing box for sealing the stem shall be removable with the system in operation, without allowing external leakage.

### 3. VALVE INSERT

- 3.1. The insert shall consist of forged brass ASTM B584 and polyoxymethylene, rated at no less than 1600 kPa static pressure and +120°C.
- 3.2. The insert shall include a lock-ring for fast fitting and re-fitting of flow regulation unit.

### 4. VALVE HOUSING

#### 4.a. FlowCon A

- 4.a.1. Valve housing shall consist of forged brass ASTM CuZn40Pb2, rated at no less than 2500 kPa static pressure and +120°C.
- 4.a.2. Valve housing shall be permanently marked to show direction of flow.
- 4.a.3. Housing shall be configured for flow regulation unit accessibility.

OR....

#### 4.b. FlowCon AB

- 4.b.1. Valve housing shall consist of forged brass ASTM CuZn40Pb2, rated at no less than 2500 kPa static pressure and +120°C.
- 4.b.2. Valve housing shall be permanently marked to show direction of flow.
- 4.b.3. Optional pressure/temperature test plugs for verifying accuracy of flow performance shall be available for all valve sizes.
- 4.b.4. Housing shall be configured for flow regulation unit accessibility.

OR....

#### 4.c. FlowCon ABV

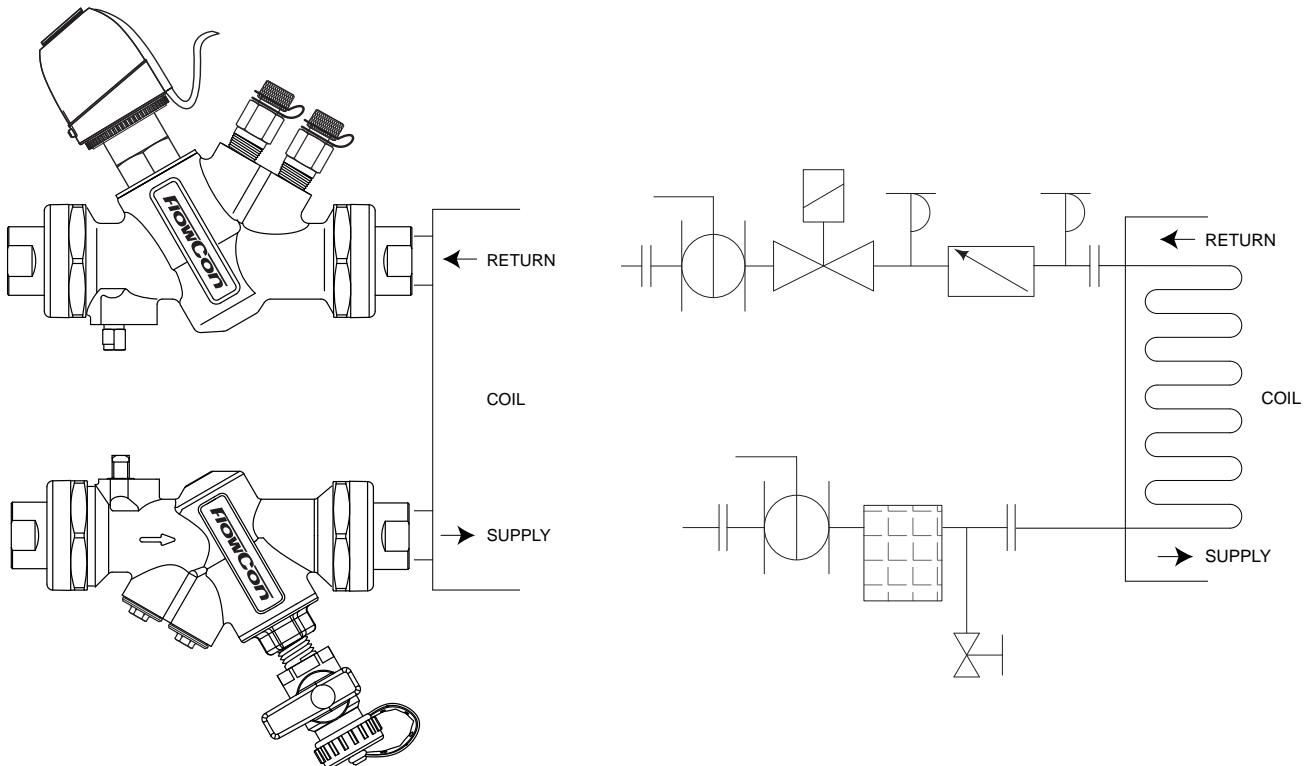

- 4.c.1. Valve housing shall consist of forged brass ASTM CuZn40Pb2, rated at no less than 2500 kPa static pressure and +120°C.
- 4.c.2. Valve housing shall be permanently marked to show direction of flow.
- 4.c.3. Valve housing shall be double union end constructed with a range of pipe connections available for the appropriate pipe size.
- 4.c.4. Valve ball shall consist of chemically nickel plated brass (ASTM CuZn40Pb2).
- 4.c.5. Optional pressure/temperature test plugs for verifying accuracy of flow performance shall be available for all valve sizes.
- 4.c.6. Housing shall be configured for flow regulation unit accessibility.

## GENERAL SPECIFICATIONS (continued)

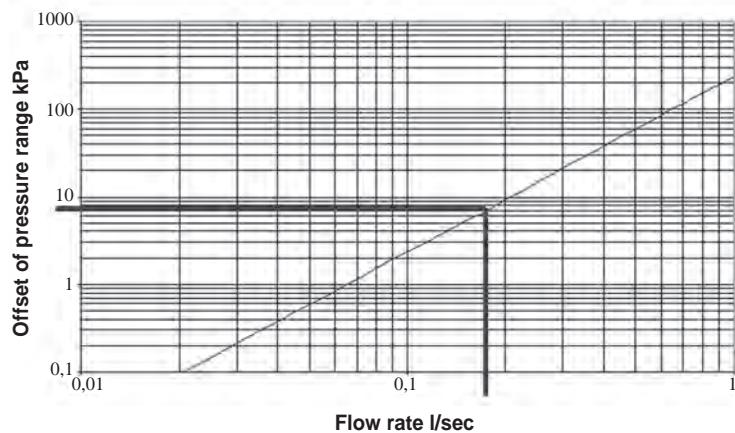

### 5. FLOW REGULATOR / AUTOMATIC BALANCING UNIT

- 5.1. Flow regulation unit assembly shall be manufactured of AISI type 304 stainless steel and stainless steel 17-7 spring.
- 5.2. Flow regulation unit shall be readily accessible for change-out or maintenance.
- 5.3. Flow regulation unit shall be available in 3 different kPaD operational ranges, minimum range shall be capable of being activated by minimum 10 kPaD. Further, the flow regulation unit shall be capable of controlling flow within  $\pm 5\%$  of rated flow.
- 5.4. Identification tags shall be available for all valves; tags shall be indelibly marked with part number and flow rate.

## APPLICATION AND SCHEMATIC EXAMPLE

## OFFSET OF PRESSURE RANGE

Example: The index flow 0.189 l/sec is selected into the cartridge no. F360206, range 2 (22-210 kPaD) from the "cartridge selection chart" on page 4. This selection will result in an offset value of 8 kPa into a new control range of 30-218 kPa for the cartridge.

***Dynamic Balancing Valve with Temperature Control***

## SPECIFICATIONS

### **Valve:**

Pressure rating:	1600 kPa / 230 psi
Temperature rating, media <sup>1</sup> :	-20°C to +120°C / -4°F to +248°F
Temperature rating, ambient:	0°C to +60°C / +32°F to +140°F
Material:	
- Cartridge:	Composite cartridges: POM (Polyoxymethylene) E-JUST cartridges: PSU (Polysulfone)
- Diaphragm:	Hydrogenated acrylonitrile-butadiene-rubber or EPDM depending on type
- Body:	Forged brass ASTM CuZn40Pb2
- EVC control insert:	Brass
- Union end connection (in-let):	Brass alloy ISO or NPT
- Seat plug and o-rings:	EPDM
Body tappings:	1/4" ISO
Maximum close off pressure:	400 kPaD / 58 psid
Shut off leakage:	Tight
Flow rate range:	0.0081-0.408 l/sec / 0.128-6.46 GPM

Note 1: Stated temperature rating is defined due to no external spindle condensation.

## MODEL NUMBER SELECTION<sup>6</sup>

Insert type of actuator:  
2=EV.0.2 3=EV.0.3 4=EV.0.4 5=EV.1.3 6=EV.1.4 7=EV.0.5  
(Determine from dimension chart)

Insert body size (OUTLET):  
1=female threaded 15mm 2=female threaded 20mm

Insert p/t plug requirement:  
O=taps open B=pressure temperature plugs P=taps plugged

Insert INLET union end connections - leave blank if no end connections required:

Body size	Female threaded	Male threaded	Sweat
Union end 15-25mm, 1/2"-1"	E=15mm=1/2" F=20mm=3/4"	H=15mm=1/2" I=20mm=3/4" J=25mm=1"	K=15mm L=18mm M=22mm

Insert connection standard:  
I=ISO N=NPT

Insert a kPaD control range:  
0 if no cartridge required  
Y=15-130 kPaD (20mm standard composite cartridge)  
17-210 kPaD (20mm E-JUST red - white pawl)  
17-210 kPaD (20mm E-JUST black or green - white pawl)  
G=30-400 kPaD (20mm standard composite cartridge)  
30-400 kPaD (20mm E-JUST red - grey pawl)  
35-400 kPaD (20mm E-JUST black or green - grey pawl)  
(Determine from cartridge selection chart)

Insert automatic flow limiting cartridge code:  
0 if no cartridge required Y=grey R=red U=blue B=black G=green  
(Determine from cartridge selection chart)

Insert cartridge dial setting/type:  
1 to 8=dial setting on standard composite cartridge  
0=standard pre-setting of 2 on standard composite cartridge  
E=E-JUST cartridge  
(Determine from cartridge selection chart)

Example: EVC.4.2.B.H.I.G.U.5=EVC 20mm ISO female threaded body with p/t plugs, 24V ON/OFF actuator, 15mm ISO male threaded union end inlet and a G-type blue standard composite cartridge - pre-setting 5.

Note 6: Flow rate, color and dial setting of cartridge are indicated on label affixed to body.

## FLOW RATE SETTING - COMPOSITE CARTRIDGE - FOR VALVES DN15-DN25

20mm · 3/4" · composite cartridge · Y-type							
Pressure range, ΔP: 20-130 kPaD (15-130 kPaD)* · 2.9-18.9 psid (2.2-18.9 psid)*							
	Model no.	ABV1.Y.Y	ABV1.Y.R	ABV1.Y.U	ABV1.Y.B	ABV1.Y.G

Accuracy: Greatest of either ±5% of controlled flow rate or ±2% of maximum flow rate

Use the FlowCon adjustment key (part number ACC0001) for adjusting the flow rate.

A setting of 4.2 corresponds to a flow rate of 0.212 l/sec for the 20mm green cartridge, range 35-400 kPaD.

## ACCESSORIES

- P/t plugs: 2 x ACC00101
- Blind cap: ACC0080 (cap without a cartridge for flushing out the system)
- Adjustment key: ACC0001 (key for adjusting the flow rate on E-JUST cartridges).

## GENERAL DESCRIPTION

The standard actuators available for the FlowCon EVC valve are thermal actuators that operate ON/OFF on 24V AC/DC, 120V AC and 230V AC/DC or modulating on 24V AC respectively. ON/OFF actuators are available with end switches which can be used for controlling the fan in priority to the open position of the valve.

The EVC valves provide temperature control and dynamic balancing for use in cooling ceilings, fan coil units in air-condition or as zone valve in heating systems.

## GENERAL SPECIFICATIONS

### 1. AUTOMATIC BALANCING AND TEMPERATURE CONTROL VALVES - FLOWCON EVC

- 1.1. Contractor shall install balancing / temperature valves where indicated in drawings.
- 1.2. The valve shall consist of dynamic, accessible, adjustable flow limiting device and integral thermal actuated two-way control valve.

### 2. VALVE ACTUATOR

- 2.1. Actuator shall provide a visual indication of the valve position.
- 2.2. The valve shall be closing when the actuator is not powered.
- 2.3. The valve shall withstand a shut off pressure of at least 400 kPa without allowing internal leakage.
- 2.4. The seat plug shall be manufactured of EPDM rubber.
- 2.5. The packing box for sealing the stem shall be removable with the system in operation, without allowing external leakage.

### 3. VALVE HOUSING

- 3.1. Valve housing shall consist of forged brass ASTM CuZn40Pb2, rated at no less than 1600 kPa static pressure and +120°C.
- 3.2. Valve housing shall be permanently marked to show direction of flow.
- 3.3. Valve housing shall be union end constructed with a range of pipe connections available for the appropriate pipe size.
- 3.4. Housing shall be configured for flow regulation unit accessibility.
- 3.5. Optional dual pressure/temperature test plugs for verifying accuracy of flow performance shall be available for all valve sizes.

### 4.a. FLOW REGULATOR / AUTOMATIC BALANCING UNIT / COMPOSITE CARTRIDGE

- 4.a.1. Flow regulation unit assembly shall be manufactured of polyoxymethylene with a hydrogenated acrylnitrile-butadiene rubber or EPDM diaphragm and stainless steel 18-8 spring.
- 4.a.2. Flow regulation unit shall be readily accessible for change-out or maintenance.
- 4.a.3. Flow regulation unit shall be adjustable to 1 of 8 different flow rates; shall be available in 2 different kPaD operational ranges; minimum range shall be capable of being activated by minimum 15 kPaD. Further, the flow regulation unit shall be capable of controlling the flow within ±10% of rated flow rate or 20l/hr.
- 4.a.4. Identification tags shall be available for all valves; tags shall be indelibly marked with flow rate, color and dial setting.

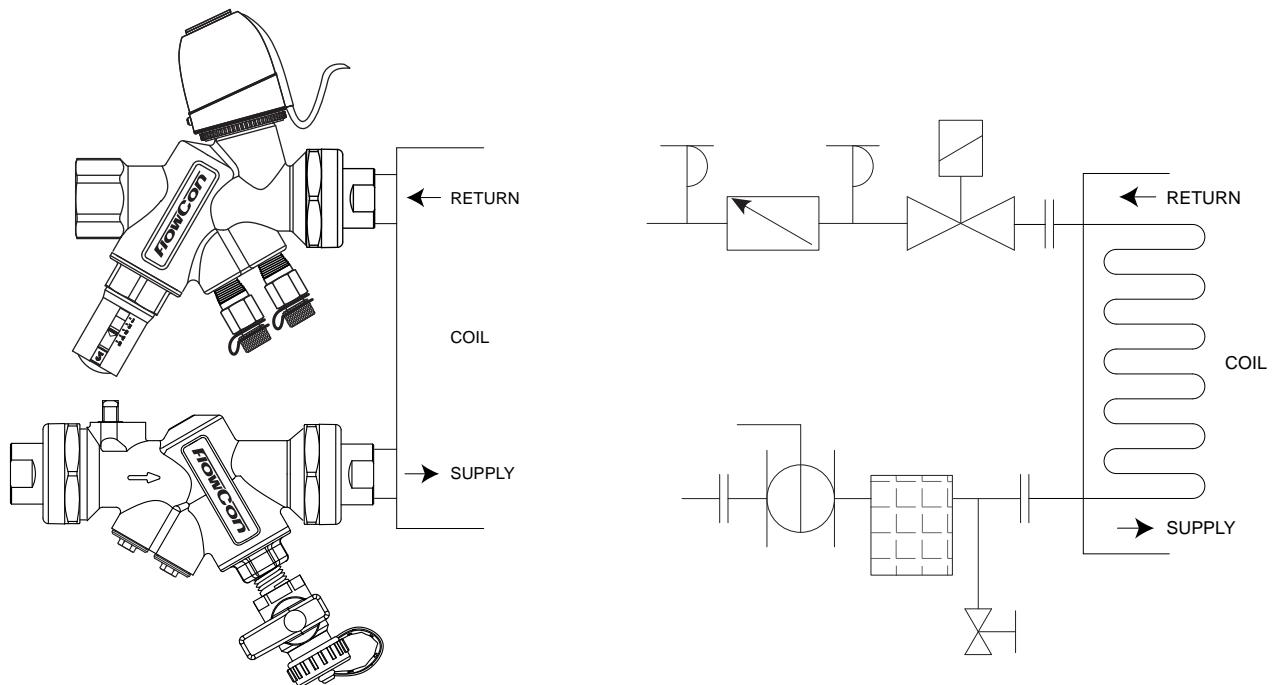

## GENERAL SPECIFICATIONS (continued)

OR...

### 4.b. FLOW REGULATOR / AUTOMATIC BALANCING UNIT / E-JUST CARTRIDGE

- 4.b.1. Flow regulation unit assembly shall be manufactured of polysulfone with a hydrogenated acrylonitrile-butadiene rubber or EPDM diaphragm and stainless steel 18-8 spring.
- 4.b.2. Flow regulation unit shall be readily accessible for change-out or maintenance.
- 4.b.3. Flow regulation unit shall be adjustable with the valve in-line and the system in operation.
- 4.b.4. Flow regulation unit shall be externally adjustable to 1 of 41 different flow rates; shall be available in 4 different kPaD operational ranges for DN15/20/25; minimum range shall be capable of being activated by minimum 17 kPaD. Further, the flow regulation unit shall be capable of controlling flow within  $\pm 5\%$  of rated flow or  $\pm 2\%$  of maximum flow.
- 4.b.5. Identification tags shall be available for all valves; tags shall be indelibly marked with flow rate, color and dial setting.

# FlowCon ABM 15-40mm

*Balanced Temperature Control Valve*

## SPECIFICATIONS

Pressure rating:	2500 kPa / 360 psi
Temperature rating, media:	-20°C to +120°C / -4°F to +248°F
Temperature rating, ambient:	-20°C to +50°C / -4°F to +122°F
Materials:	
- Cartridge:	Composite cartridges: POM (Polyoxymethylene) E-JUST cartridges: PSU (Polysulfone)
- Diaphragm:	Hydrogenated acrylonitrile-butadiene-rubber or EPDM depending on type
- Body:	Forged brass ASTM CuZn40Pb2
- Ball valve:	Chemically nickel plated brass ball
- OPTIMIZER insert:	NORYL, glass filled polymer
- Ball seals:	Reinforced teflon (PTFE)
- Union end connection:	Brass alloy ISO or NPT
- Stem seals and o-rings:	EPDM
Body tappings:	1/4" ISO
Max. close off pressure:	700 kPa / 101.5 psi
Flow rate range:	0.0081-1.43 l/sec (standard composite cartridge) 0.0278-1.62 l/sec (E-JUST cartridge)

Note 1: For ball and Optimizer® insert.

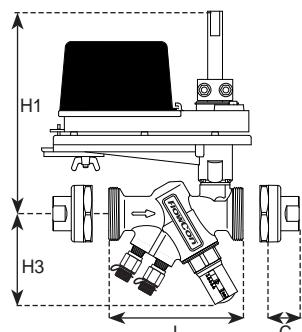

Note 2: Add end connection length to body length.

Note 3: For valve body.

Note 4: Ball without Optimizer® insert.

FlowCon ABM with composite cartridge

FlowCon ABM with E-JUST cartridge

## MODEL NUMBER SELECTION<sup>5</sup>

The figure displays a population dynamics simulation over time. The y-axis is labeled 'Population' and ranges from 0 to 100. The x-axis is labeled 'Time' and ranges from 0 to 100. The population starts at 100, drops to 50 by time 10, stays constant until time 30, then drops to 0 by time 40, and remains at 0 until time 100. A legend indicates that blue bars represent 'Infected' individuals and red bars represent 'Susceptible' individuals.

Insert body size:  
1=ABM1 body (15/20/25mm) 2=ABM2 body (25/32/40mm)

Insert Optimizer® insert:  
Insert 1, 2, 3, 4, 5 or 6 \_\_\_\_\_  
(Determine from dimension chart)

Insert p/t plug requirement:  
O=taps open B=pressure temperature plugs P=taps plugged

Insert power supply, actuator:

Insert power supply, actuator  
0=if no actuator required

1=24V 2-position or 3-point floating (without end switches) (BBTS1000)  
 2=240V 2-position or 3-point floating (without end switches) (BBTHV1200A)  
 3=24V modulating (without end switches) (BBMS2000)  
 4=24V 2-position or 3-point floating incl. auxiliary switches (BBTS1021)  
 5=240V 2-position or 3-point floating incl. auxiliary switches (BBTHV1221A)  
 6=24V modulating incl. auxiliary switches (BBMS2021)

Insert inlet x outlet union end connections:

Body size	Female threaded	Male tressed	Sweat
Union end 15-20mm, 1/2"-1"	E=15mm=1/2" F=20mm=3/4"	H=15mm=1/2" I=20mm=3/4" J=25mm=1"	K=15mm L=18mm M=22mm
Union end 25-40mm, 1"-1 1/2"	G=25mm=1" P=32mm=1 1/4" Q=40mm=1 1/2"	J=25mm=1" S=32mm=1 1/4" T=40mm=1 1/2"	N=28mm W=35mm

Insert connection standard:  
I=ISO N=NPT \_\_\_\_\_

Insert a kPaD control range:

O If no cartridge required

Y=15-130 kPaD (20mm standard composite cartridge)  
 17-200 kPaD (20mm E-JUST red - white pawl)  
 17-210 kPaD (20mm E-JUST black or green - white pawl)  
 17-400 kPaD (40mm E-JUST - white pawl)

G=30-400 kPaD (20mm standard composite cartridge)  
 30-400 kPaD (20mm E-JUST red - grey pawl)  
 35-400 kPaD (20mm E-JUST black or green - grey pawl)

X=15-130 kPaD (40mm standard composite cartridge)

C=22-300 kPaD (40mm standard composite cartridge)

D=30-410 kPaD (40mm standard composite cartridge)

(Determine from cartridge selection chart)

Insert automatic flow limiting cartridge code:  
O if no cartridge required Y=grey R=red  
(Determine from cartridge selection chart) U=blue B=black G=green W=white

Insert cartridge dial setting/type:  
1 to 8=dial setting on standard composite cartridge  
0=standard pre-setting of 2 on standard composite cartridge  
E=E-JUST cartridge  
(Determine from cartridge selection chart)

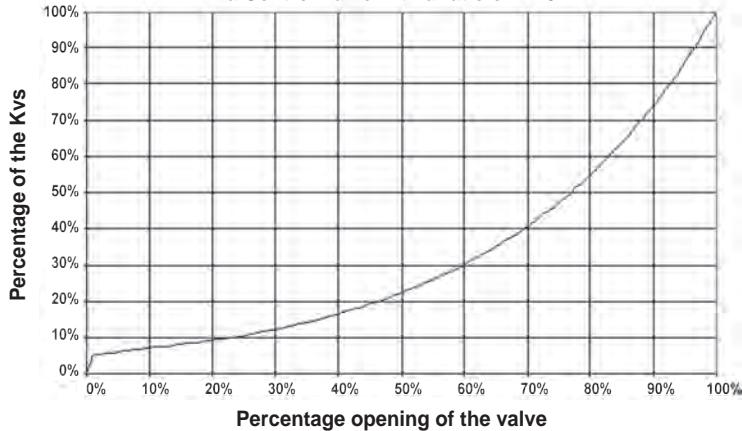

Example: ABM.1.1.B.1.E.E.I.Y.Y.0=ABM1-body with Optimizer® insert 1, p/t plugs and 24V actuator, 15mm ISO female threaded union connections and a Y-type grey standard composite cartridge - pre-setting 2.

Note 5: Flow rate, color and dial setting of cartridge are indicated on label affixed to body.

## EQUAL PERCENTAGE CHARACTERISTIC

The Flow Optimizer® provides equal percentage control so that the heat output at the coil is linear when compared to the open area of the ball.

**Equal percentage characteristic of a Control Valve with a ratio of 1:20**

	1.60	5750	25.3	4.9
	1.62	5830	25.7	5.0

Accuracy: Greatest of either  $\pm 5\%$  of controlled flow rate or  $\pm 2\%$  of maximum flow rate

Use the FlowCon adjustment key (part number ACC0001) for adjusting the flow rate.

A setting of 4.2 corresponds to a flow rate of 1.45 l/sec for the 40mm cartridge, range 17-400 kPaD.

## ACTUATOR SPECIFICATIONS<sup>6</sup>

Supply voltage:	24V: 22-26V AC / 28-32V DC 240V: 220-250V AC 50/60Hz Modulating: 22-26V AC / 28-32V DC
Control signal:	2-position / 3-point-floating or modulating 2-10V DC / 4-20mA
Max. power consumption:	24V: 6VA 240V: 7 watts at 240V AC Modulating: 6VA
Electrical connection:	18 AWG (0.8mm <sup>2</sup> ) minimum
Angle of rotation:	0°-90°, mechanically adjustable
Torque at rated voltage:	5.6 Nm
Direction of rotation:	Reversible
Rotation time through 90°:	24V: 90-110 sec 240V: 20-30 sec, torque dependent Modulating: 90-110 sec
Auxiliary switches:	2 mechanical, fixed at 10° and 80° (only on types 4, 5 and 6)
Auxiliary switch rating:	1 Amp resistive, 24V AC
Housing material:	Electronic enclosure: flammability rating UL94-5V
Gear train enclosure:	Die cast zinc with a steel base
Ambient temperature:	-20°C to +50°C
Humidity rating:	5 to 95% non condensing
Protection:	IP22, NEMA type 2
Weight:	1.4 kg
Cable:	Actuators do not include length of cable. Actuators can be field wired up to 45 mtr.

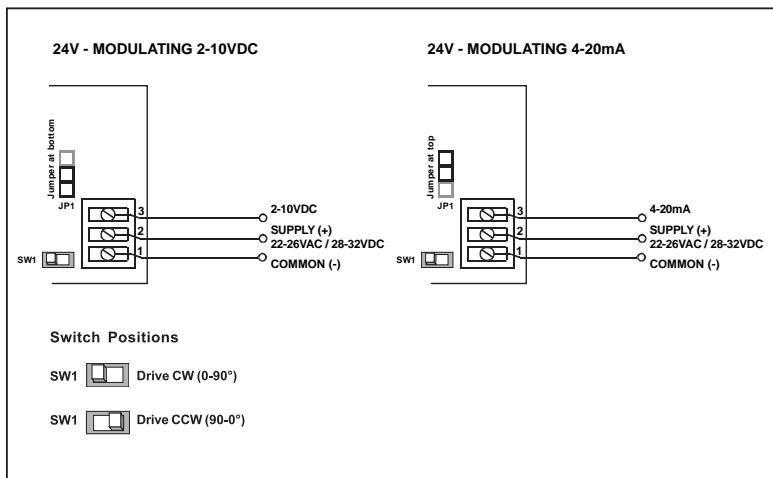

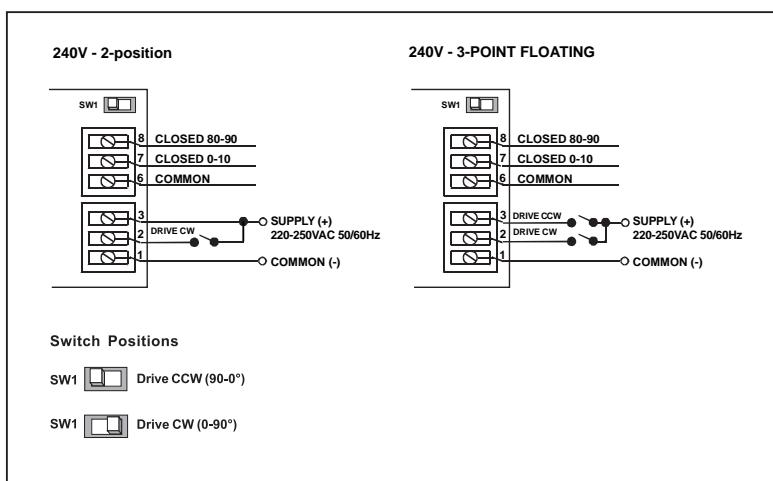

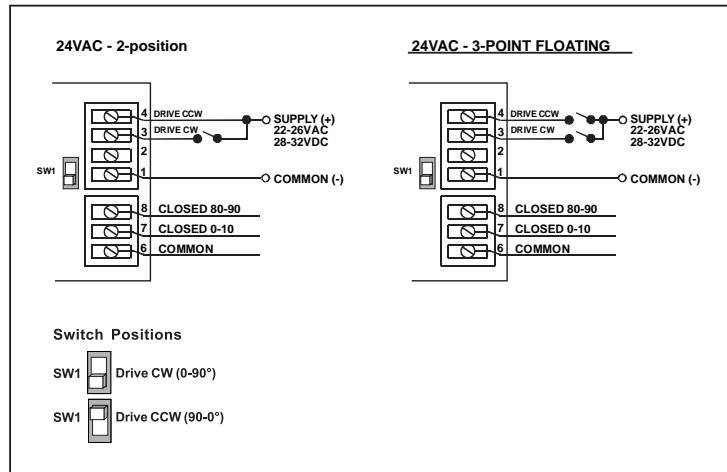

Note 6: FlowCon warranty is voided using other actuators than supplied or recommended by FlowCon International A/S.

## ACTUATOR DESCRIPTION

The three standard actuators available for the FlowCon ABM valve are basic digital actuators that operate on 24V AC and 240V AC or a modulating version operating on 24V AC respectively. All models deliver a minimum of 5.6 Nm torque at rated voltage. The direction of rotation is reversible and the angle of rotation may be mechanically limited. Actuators are available with 2 mechanical auxiliary switches.

Note: Do not press clutch on actuator, when actuator is powered.

## WIRING SCHEMATICS

## ACCESSORIES

- P/t plugs: 2 x ACC00101
- Blind cap: ACC0080 / ACC0081 (cap (small / medium) without a cartridge for flushing out the system)
- Adjustment key: ACC0001 (key for adjusting the flow rate on E-JUST cartridges and turning the ball valve).

## GENERAL SPECIFICATIONS

### 1. AUTOMATIC BALANCING AND TEMPERATURE CONTROL VALVES - FLOWCON ABM

- 1.1. Contractor shall install balancing / temperature control valves where indicated in drawings.
- 1.2. Valve shall consist of dynamic, accessible, adjustable flow limiting device and integral electrically actuated two-way control valve.

### 2. VALVE ACTUATOR

- 2.1. Actuator housing shall be rated to IP22.
- 2.2. Actuator shall be driven by a 22-26V AC / 28-32V DC or 220-250V AC 50/60Hz motor and shall accept 2-10V DC, 4-20mA, 3-point-floating or 2-position electric signal depending on actuator selection.
- 2.3. Actuator shall have a power consumption not exceeding 6VA at 24V AC or 7 watts at 240V AC depending on actuator selection.
- 2.4. Actuator shall provide minimum torque required for full valve shut off position.

### 3. VALVE HOUSING AND ACTUATED BALL VALVE

- 3.1. Valve housing shall consist of forged brass ASTM CuZn40Pb2, rated at no less than 2500 kPa at +120°C.
- 3.2. Valve ball shall consist of chemically nickel plated brass (CuZn40Pb2). A range of inserts made of glass filled polymer providing equal percentage control shall be available from the manufacturer.
- 3.3. Each valve size shall be available with the choice of 4 unique Kvs values for the ball valve.
- 3.4. Valve housing shall be permanently marked to show direction of flow.
- 3.5. Valve housing shall be double union end constructed with a range of pipe connections available for the appropriate pipe size.
- 3.6. Optional dual pressure/temperature test plugs for verifying accuracy of flow performance shall be available for all valve sizes.
- 3.7. Housing shall be configured for flow regulation unit accessibility.

### 4.a. FLOW REGULATOR / AUTOMATIC BALANCING UNIT / COMPOSITE CARTRIDGE

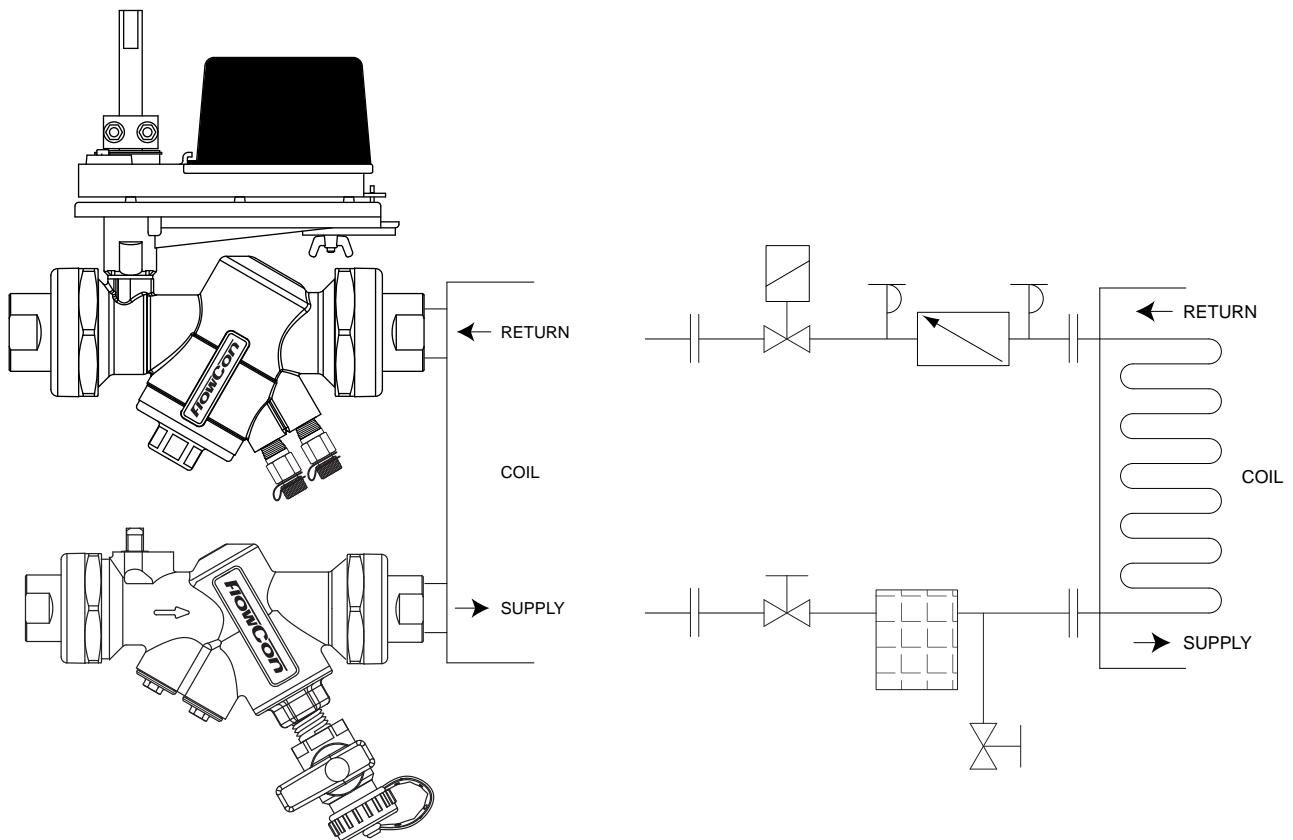

- 4.a.1. Flow regulation unit assembly shall be manufactured of polyoxymethylene with a hydrogenated acrylonitrile-butadiene rubber or EPDM diaphragm and stainless steel 18-8 spring.
- 4.a.2. Flow regulation unit shall be readily accessible for change-out or maintenance.
- 4.a.3. Flow regulation unit shall be adjustable to 1 of 8 different flow rates; shall be available in 2 different kPaD operational ranges for DN15/20/25 and 3 different kPaD operational ranges for DN25/32/40; minimum range shall be capable of being activated by minimum 15 kPaD. Further, the flow regulation unit shall be capable of controlling flow within ±10% of rated flow rate or 20l/hr.
- 4.a.4. Identification tags shall be available for all valves; tags shall be indelibly marked with flow rate, color and dial setting.

OR....

### 4.b. FLOW REGULATOR / AUTOMATIC BALANCING UNIT / E-JUST CARTRIDGE

- 4.b.1. Flow regulation unit assembly shall be manufactured of polysulfone with a hydrogenated acrylonitrile-butadiene rubber or EPDM diaphragm and stainless steel 18-8 spring.
- 4.b.2. Flow regulation unit shall be readily accessible for change-out or maintenance.
- 4.b.3. Flow regulation unit shall be adjustable with the valve in-line and the system in operation.
- 4.b.4. Flow regulation unit shall be externally adjustable to 1 of 41 different flow rates; shall be available in 4 different kPaD operational ranges for DN15/20/25 and 1 kPaD operational range for DN25/32/40; minimum range shall be capable of being activated by minimum 17 kPaD. Further, the flow regulation unit shall be capable of controlling flow within ±5% of rated flow or ±2% of maximum flow.
- 4.b.5. Identification tags shall be available for all valves; tags shall be indelibly marked with flow rate, color and dial setting.

# FlowCon A / AB / ABV

*The “Adjustable” Automatic Flow Control Valves*

# FlowCon A, AB and ABV

*Dynamic Balancing Valve with Adjustable Flow Cartridge*

The FlowCon A, AB and ABV automatic balancing valves are designed for balancing heating and air-conditioning terminal units by providing a constant flow rate with the added feature of being adjustable.

With these automatic balancing valves flow can be controlled with one of two different cartridges; either an internal composite cartridge or an externally adjustable E-JUST cartridge. Both cartridge-types keep the flow rate constant, even with system pressure conditions changing.

The main difference between these and other automatic balancing valves is that each flow control cartridge can be easily adjusted to a new flow rate if necessary.

#### Standard Composite Cartridge

The standard composite cartridge is easily removed from the valve body and adjusted to one of eight different flow rates by means of an Hex key. There are 14 different adjustable cartridges, totalling nearly 100 different flow rates available for valve sizes 15mm through 40mm.

#### E-JUST Cartridge

The E-JUST cartridge can be externally adjusted to one of 41 flow rates even when the system is operating. The E-JUST cartridge is tamper-proof since adjustment is carried out by means of a special FlowCon key. Further the setting can be sealed with a top cover.

#### Stainless Steel Cartridge

Alternatively, a factory pre-set stainless steel cartridge can be used together with an adaptor. These cartridges are single flow cartridges, but exchanging of the cartridge and adaptor is straight forward.

#### Features and Benefits

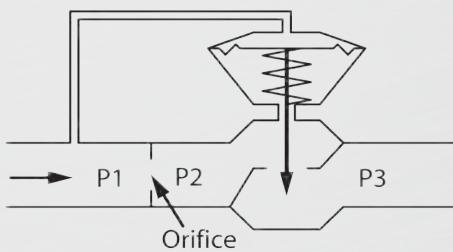

- **Automatic balancing**, the correct flow rate for each circuit is achieved automatically.
- **Dynamic balancing**, the correct flow rate is maintained as each valve compensates for pressure fluctuations in the system.
- **Field adjustable**, flow rate can be changed on demand, either internally or externally adjustment or cartridge exchange.
- **Elimination of branch or "partner" balancing valves** which results in fewer total valves used in each project.
- **Easily accessible cartridge** for flow rate adjustment or maintenance.
- **Accuracy** of  $\pm 10\%$  or 20 l/hr (standard composite cartridge) alternatively  $\pm 5\%$  of controlled flow rate or  $\pm 2\%$  of maximum flow rate (E-JUST cartridge). For stainless steel cartridges accuracy is  $\pm 5\%$ .
- **Built-in isolation ball valve** (FlowCon ABV).
- **Pressure/temperature measurement plugs** available for verifying operating differential pressure or checking  $\Delta T$  across the coil (FlowCon AB/ABV).
- **Double union end connection** for ease of installation and wide selection of end fittings (FlowCon ABV) or **fixed female threaded ends** (FlowCon A/AB).

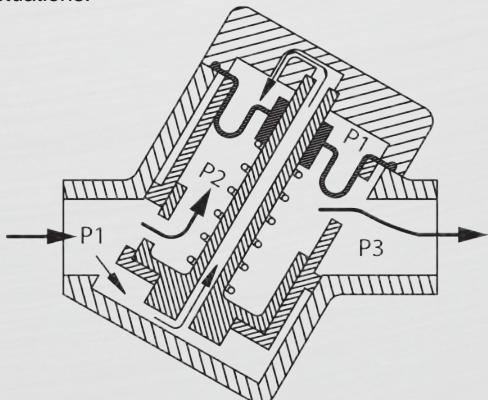

#### Principle of Cartridge Operation

- FlowCon Composite  
and FlowCon E-JUST Cartridges

The flow control cartridge of FlowCon A/AB/ABV contains two interacting components; one that has an adjustable orifice, and one that regulates the pressure differential across the adjustable orifice.

For the FlowCon A/AB/ABV, the principle of operation is shown above and the principle of construction is shown below. P1 and P3 are system pressures, P1-P3 is the total pressure drop across the valve. P2 is set by the diaphragm acting in reaction to P1 in the upper diaphragm chamber. Interacting with the spring, P1-P2 remains constant, keeping a constant  $\Delta P$  across the orifice areas. The result is a constant flow rate through the valve, independent of pressure fluctuations.

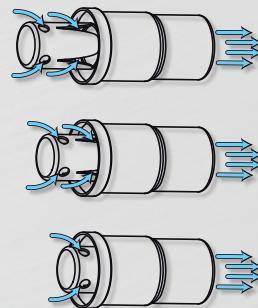

Below its pressure differential range, the valve acts as a fixed orifice. This allows a temperature control valve in the same circuit to operate with valve authority up to the set flow rate maximum.

In case the differential pressure is higher than the defined max.  $\Delta P$  for the cartridge, the diaphragm may be damaged.

#### Principle of Cartridge Operation

- Stainless Steel Cartridges

Below its pressure differential range the stainless steel cartridge acts as a fixed orifice. This allows a modulating valve in the same circuit to operate with valve authority up to the flow rate specified for the FlowCon A/AB/ABV.

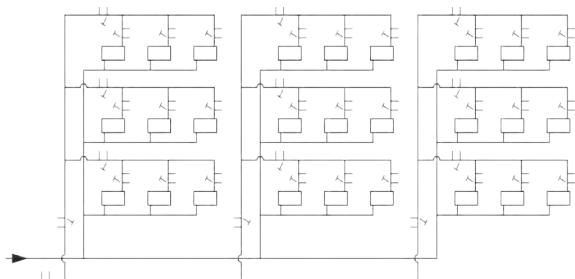

Within operating pressure differential range, the effective open orifice area of the cartridge is automatically adjusted to the point where the specified flow rate will be delivered (as the pressure differential increases, the open area closes and as it decreases, the area opens).

When the pressure differential range is exceeded, the valve again becomes a fixed orifice device. This ensures that no part of the system is starved or shut down.

## Automatic vs. Manual System Layout Comparison

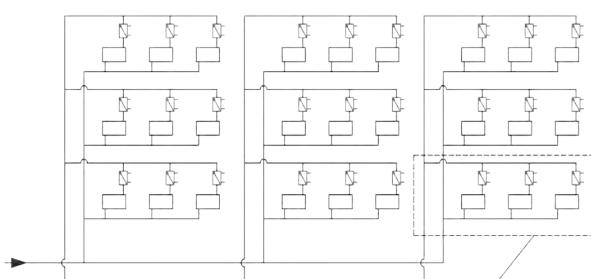

### Manually balanced system.

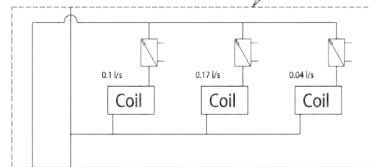

**Total number of valves (manual) 40.**

In addition to terminal unit valves, manual balancing requires "partner valves" located on the branches, risers and main.

### Automatic balanced system.

**Total number of valves (automatic) 27.**

Each branch is automatically balanced due to the correct balance of each coil. Sum total of 0.31 l/sec (branch).

NOTE: The location of the FlowCon A/AB/ABV does not require lengths of pipe before or after the valve.

### Technical Data

For further information and part number selection please see FlowCon tech note and the catalogue:

FlowCon Inserts and Cartridges. For latest updates please see [www.flowcon.com](http://www.flowcon.com).

***Dynamic Balancing Valve - Adjustable Cartridge***

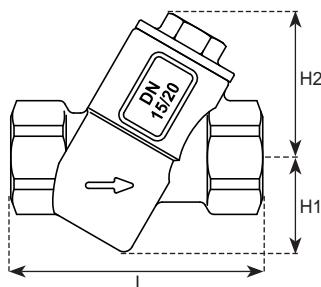

## SPECIFICATIONS

Pressure rating:	2500 kPa / 360 psi
Temperature rating, media:	-20°C to +120°C / -4°F to +248°F
Material:	
- Cartridge:	Composite cartridges: POM (Polyoxymethylene) E-JUST cartridges: PSU (Polysulfone)
- Diaphragm:	Hydrogenated acrylonitrile-butadiene-rubber or EPDM depending on type
- Body:	Forged brass ASTM CuZn40Pb2
- O-rings:	EPDM
End connections:	Fixed female ISO or NPT (DN25 is only available in ISO)
Flow rate range:	0.0081-0.408 l/sec (standard composite cartridge) 0.0278-0.352 l/sec (E-JUST cartridge)

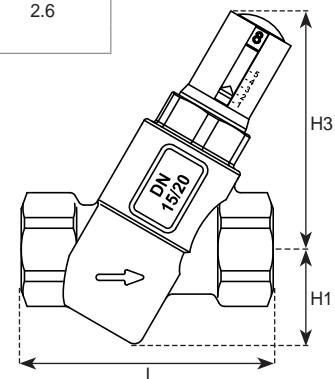

## DIMENSIONS AND WEIGHTS (NOMINAL) (measured in mm unless noted)

Valve size	Cartridge size	L	H1	H2	H3	Weight (kgs.)	Kv <sup>1</sup> (m <sup>3</sup> /hr)
15	20	80	31	50	80	0.58	2.6
20						0.53	
25						0.56	

Note 1: For valve body.

FlowCon A with composite cartridge

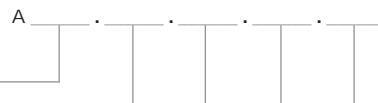

FlowCon A with E-JUST cartridge

## MODEL NUMBER SELECTION<sup>2</sup>

Insert body size:

15=female threaded end 15mm 20=female threaded end 20mm 25=female threaded end 25mm

Insert connection standard:

I=ISO (15-20mm) I.K=ISO (25mm)

Insert a kPaD control range:

O if no cartridge required

Y=15-130 kPaD (standard composite cartridge)

17-200 kPaD (E-JUST red - white pawl)

17-210 kPaD (E-JUST black or green - white pawl)

G=30-400 kPaD (standard composite cartridge)

30-400 kPaD (E-JUST red - grey pawl)

35-400 kPaD (E-JUST black or green - grey pawl)

(Determine from cartridge selection chart)

Insert automatic flow limiting cartridge code:

O if no cartridge required Y=grey R=red U=blue B=black G=green

(Determine from cartridge selection chart)

Insert cartridge dial setting/type:

1 to 8=dial setting on standard composite cartridge

0=standard pre-setting of 2 on standard composite cartridge

E=E-JUST cartridge

(Determine from cartridge selection chart)

Example: A20.I.Y.Y.0=A 20mm ISO female threaded body with a Y-type grey standard composite cartridge - pre-setting 2.

Note 2: Flow rate, color and dial setting of cartridge are indicated on label affixed to body.

Accuracy: Greatest of either  $\pm 5\%$  of controlled flow rate or  $\pm 2\%$  of maximum flow rate

Use the FlowCon adjustment key (part number ACC0001) for adjusting the flow rate.

A setting of 4.2 corresponds to a flow rate of 0.304 l/sec for the 20mm red cartridge, range 30-400 kPaD.

Accuracy: Greatest of either ±5% of controlled flow rate or ±2% of maximum flow rate

Use the FlowCon adjustment key (part number ACC0001) for adjusting the flow rate.

A setting of 4.2 corresponds to a flow rate of 0.212 l/sec for the 20mm green cartridge, range 35-400 kPaD.

## ACCESSORIES

- Blind cap: ACC0080 (cap without a cartridge for flushing out the system)
- Adjustment key: ACC0001 (key for adjusting the flow rate on E-JUST cartridges).

## GENERAL SPECIFICATIONS

### 1. AUTOMATIC BALANCING VALVES - FLOWCON A

- 1.1. Contractor shall install automatic balancing valves where indicated in drawings.
- 1.2. Valve shall consist of dynamic, accessible, adjustable flow limiting device.

### 2. VALVE HOUSING

- 2.1. Valve housing shall consist of forged brass ASTM CuZn40Pb2, rated at no less than 2500 kPa static pressure and +120°C.
- 2.2. Valve housing shall be permanently marked to show direction of flow.
- 2.3. Housing shall be configured for flow regulation unit accessibility.

### 3.a. FLOW REGULATOR / AUTOMATIC BALANCING UNIT / COMPOSITE CARTRIDGE

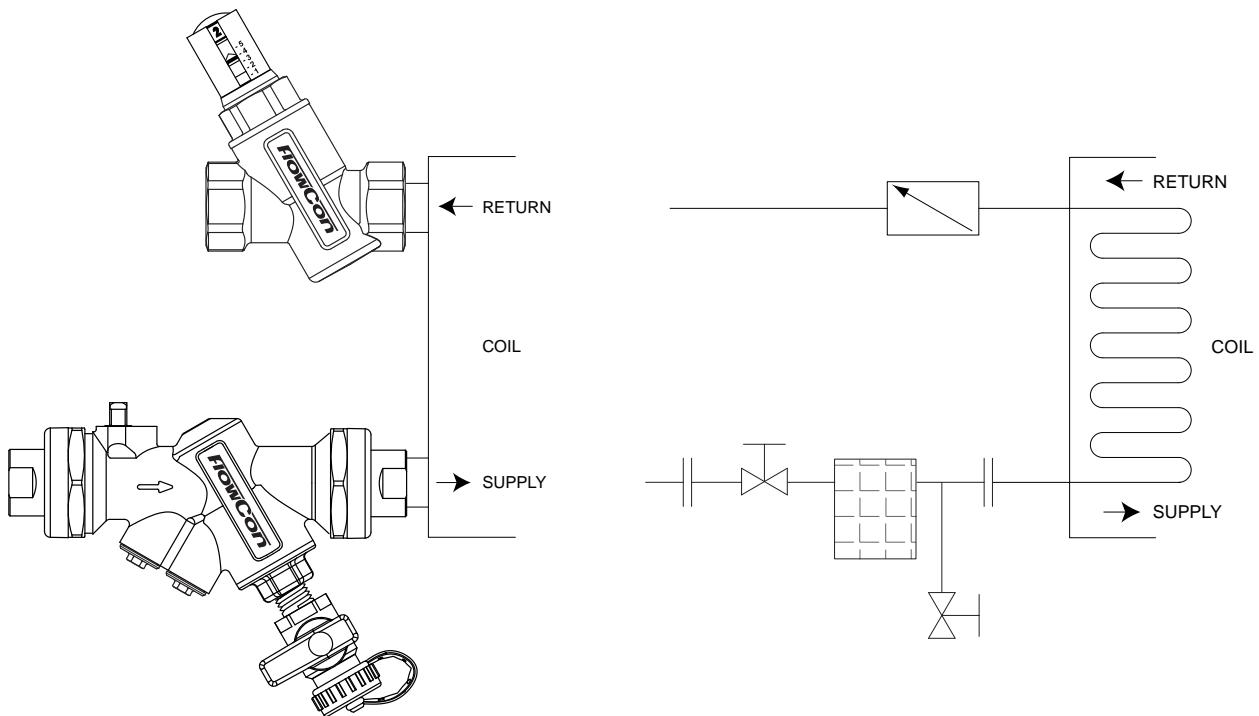

- 3.a.1. Flow regulation unit assembly shall be manufactured of polyoxymethylene with a hydrogenated acrylonitrile-butadiene rubber or EPDM diaphragm and stainless steel 18-8 spring.
- 3.a.2. Flow regulation unit shall be readily accessible for change-out or maintenance.
- 3.a.3. Flow regulation unit shall be adjustable to 1 of 8 different flow rates and shall be available in 2 different kPaD operational ranges; minimum range shall be capable of being activated by minimum 15 kPaD. Further, the flow regulation unit shall be capable of controlling the flow within ±10% of rated flow rate or 20l/hr.
- 3.a.4. Identification tags shall be available for all valves; tags shall be indelibly marked with flow rate, color and dial setting.

OR...

### 3.b. FLOW REGULATOR / AUTOMATIC BALANCING UNIT / E-JUST CARTRIDGE

- 3.b.1. Flow regulation unit assembly shall be manufactured of polysulfone with a hydrogenated acrylonitrile-butadiene rubber or EPDM diaphragm and stainless steel 18-8 spring.
- 3.b.2. Flow regulation unit shall be readily accessible for change-out or maintenance.
- 3.b.3. Flow regulation unit shall be adjustable with the valve in-line and the system in operation.
- 3.b.4. Flow regulation unit shall be externally adjustable to 1 of 41 different flow rates; shall be available in 4 different kPaD operational ranges for minimum range shall be capable of being activated by minimum 17 kPaD. Further, the flow regulation unit shall be capable of controlling flow within ±5% of rated flow or ±2% of maximum flow.
- 3.b.5. Identification tags shall be available for all valves; tags shall be indelibly marked with flow rate, color and dial setting.

*Dynamic Balancing Valve - Adjustable Cartridge*

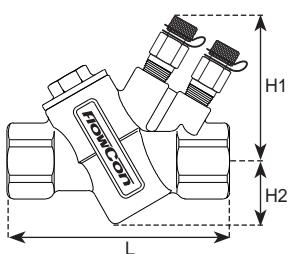

## SPECIFICATIONS

Pressure rating:	2500 kPa / 360 psi
Temperature rating, media:	-20°C to +120°C / -4°F to +248°F
Material:	
- Cartridge:	Composite cartridges: POM (Polyoxymethylene) E-JUST cartridges: PSU (Polysulfone)
- Diaphragm:	Hydrogenated acrylonitrile-butadiene-rubber or EPDM depending on type
- Body:	Forged brass ASTM CuZn40Pb2
- O-rings:	EPDM
End connections:	Fixed female ISO or NPT
Body tappings:	1/4" ISO
Flow rate range:	0.0081-1.43 l/sec (standard composite cartridge) 0.0278-4.48 l/sec (E-JUST cartridge)

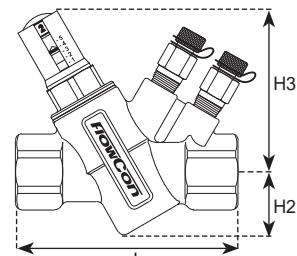

## DIMENSIONS AND WEIGHTS (NOMINAL) (measured in mm unless noted)

Valve size	Cartridge size	L	H1	H2	H3	Weight (kgs.)	Kv <sup>1</sup> (m <sup>3</sup> /hr)
15	20	82	66	31	78	0.51	2.6
20		94				0.56	
25		102				0.62	
25	40	128	83	47	99	2.00	12.5
32		-				1.80	
40	50	169	-	54.5	117	4.00	23.0
50		-				3.50	

Note 1: For valve body.

FlowCon AB with composite cartridge

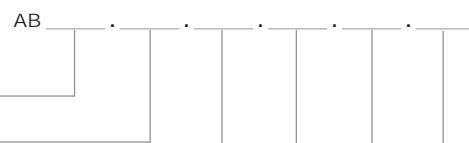

FlowCon AB with E-JUST cartridge

## MODEL NUMBER SELECTION<sup>2</sup>

Insert body size:

15=female threaded end 15mm 20=female threaded end 20mm 25=female threaded end 25mm  
32=female threaded end 32mm 40=female threaded end 40mm 50=female threaded end 50mm

Leave it blank if taps open B=pressure temperature plugs P=taps plugged

Insert connection standard:

I=ISO, 15-50mm (except 25mm (20mm cartridge))  
I.K=ISO, 25mm (20mm cartridge)  
N=NPT, 15-50mm (except 25mm (20mm cartridge))  
N.K=NPT, 25mm (20mm cartridge)

Insert a kPaD control range:

O if no cartridge required  
Y=15-130 kPaD (20mm standard composite cartridge)  
17-200 kPaD (20mm E-JUST red - white pawl)  
17-210 kPaD (20mm E-JUST black or green - white pawl)  
17-400 kPaD (40mm E-JUST - white pawl)  
G=20-400 kPaD (50mm E-JUST - grey pawl)  
30-400 kPaD (20mm standard composite cartridge)  
30-400 kPaD (20mm E-JUST red - grey pawl)  
35-400 kPaD (20mm E-JUST black or green - grey pawl)  
X=15-130 kPaD (40mm standard composite cartridge)  
C=22-300 kPaD (40mm standard composite cartridge)  
D=30-410 kPaD (40mm standard composite cartridge)  
(Determine from cartridge selection chart)

Insert automatic flow limiting cartridge code:

O if no cartridge required

Y=grey

R=red

U=blue

B=black (B=standard code for E-JUST 50mm)

G=green (G=standard code for E-JUST 40mm)

W=white

(Determine from cartridge selection chart)

Insert cartridge dial setting/type:

1 to 8=dial setting on standard composite cartridge  
O=standard pre-setting of 2 on standard composite cartridge  
E=E-JUST cartridge  
(Determine from cartridge selection chart)

Example: AB20.B.I.Y.Y.O=AB 20mm ISO female threaded body with p/t plugs and a Y-type grey standard composite cartridge - pre-setting 2.

Note 2: Flow rate, color and dial setting of cartridge are indicated on label affixed to body.

Use the FlowCon adjustment key (part number ACC0001) for adjusting the flow rate.

A setting of 4.2 corresponds to a flow rate of 0.144 l/sec for the 20mm green cartridge, range 17-210 kPaD.

	4.48	16100	70.9	5.0

Accuracy: Greatest of either  $\pm 5\%$  of controlled flow rate or  $\pm 2\%$  of maximum flow rate

Use the FlowCon adjustment key (part number ACC0001) for adjusting the flow rate.

A setting of 4.2 corresponds to a flow rate of 4.10 l/sec for the 50mm cartridge, range 20-400 kPaD.

## ACCESSORIES

- P/t plugs: 2 x ACC00101
- Blind cap: ACC0080 / ACC0081 / ACC0084 (cap (small / medium / large) without a cartridge for flushing out the system)
- Adjustment key: ACC0001 (key for adjusting the flow rate on E-JUST cartridges).

## GENERAL SPECIFICATIONS

### 1. AUTOMATIC BALANCING VALVES - FLOWCON AB

- 1.1. Contractor shall install automatic balancing valves where indicated in drawings.
- 1.2. Valve shall consist of dynamic, accessible, adjustable flow limiting device.

### 2. VALVE HOUSING

- 2.1. Valve housing shall consist of forged brass ASTM CuZn40Pb2, rated at no less than 2500 kPa static pressure and +120°C.
- 2.2. Valve housing shall be permanently marked to show direction of flow.
- 2.3. Optional dual pressure/temperature test plugs for verifying accuracy of flow performance shall be available for all valve sizes.
- 2.4. Housing shall be configured for flow regulation unit accessibility.

### 3.a. FLOW REGULATOR / AUTOMATIC BALANCING UNIT / COMPOSITE CARTRIDGE

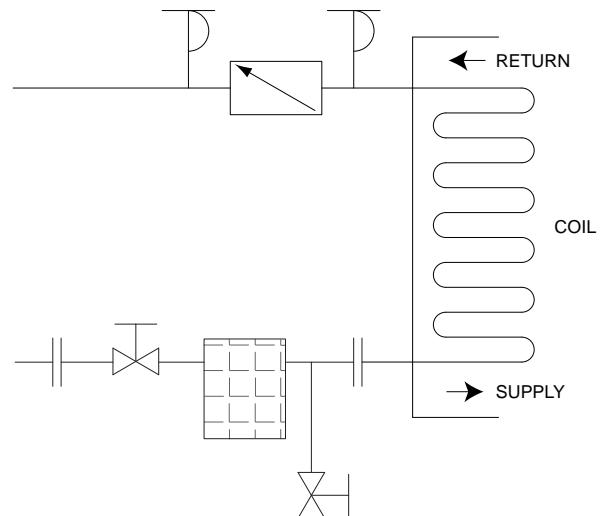

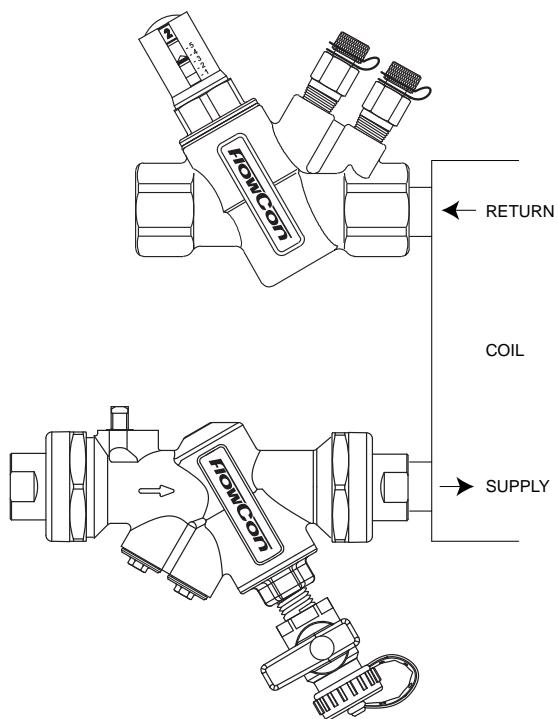

- 3.a.1. Flow regulation unit assembly shall be manufactured of polyoxymethylene with a hydrogenated acrylonitrile-butadiene rubber or EPDM diaphragm and stainless steel 18-8 spring.
- 3.a.2. Flow regulation unit shall be readily accessible for change-out or maintenance.
- 3.a.3. Flow regulation unit shall be adjustable to 1 of 8 different flow rates; shall be available in 2 different kPaD operational ranges for DN15/20/25 and 3 different kPaD operational ranges for DN25/32/40; minimum range shall be capable of being activated by minimum 15 kPaD. Further, the flow regulation unit shall be capable of controlling flow within ±10% of rated flow rate or 20l/hr.
- 3.a.4. Identification tags shall be available for all valves; tags shall be indelibly marked with flow rate, color and dial setting.

OR...

### 3.b. FLOW REGULATOR / AUTOMATIC BALANCING UNIT / E-JUST CARTRIDGE

- 3.b.1. Flow regulation unit assembly shall be manufactured of polysulfone with a hydrogenated acrylonitrile-butadiene rubber or EPDM diaphragm and stainless steel 18-8 spring.
- 3.b.2. Flow regulation unit shall be readily accessible for change-out or maintenance.
- 3.b.3. Flow regulation unit shall be adjustable with the valve in-line and the system in operation.
- 3.b.4. Flow regulation unit shall be externally adjustable to 1 of 41 different flow rates; shall be available in 4 different kPaD operational ranges for DN15/20/25, 1 kPaD operational range for DN25/32/40 and 1 kPaD operational range for DN40/50; minimum range shall be capable of being activated by minimum 17 kPaD. Further, the flow regulation unit shall be capable of controlling flow within ±5% of rated flow or ±2% of maximum flow.
- 3.b.5. Identification tags shall be available for all valves; tags shall be indelibly marked with flow rate, colour and dial setting.

***Dynamic Balancing Valve - Adjustable Cartridge***

## SPECIFICATIONS

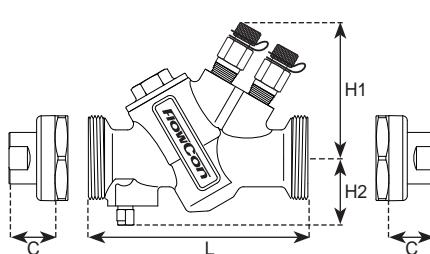

Pressure rating:	2500 kPa / 360 psi
Temperature rating, media:	-20°C to +120°C / -4°F to +248°F
Material:	
- Cartridge:	Composite cartridges: POM (Polyoxymethylene) E-JUST cartridges: PSU (Polysulfone)
- Diaphragm:	Hydrogenated acrylonitrile-butadiene-rubber or EPDM depending on type
- Body:	Forged brass ASTM CuZn40Pb2
- Ball valve:	Chemically nickel plated brass ball
- Union end connections:	Brass alloy ISO or NPT
- O-rings:	EPDM
Body tappings:	1/4" ISO
Flow rate range:	0.0081-1.43 l/sec (standard composite cartridge) 0.0278-1.62 l/sec (E-JUST cartridge)

## DIMENSIONS AND WEIGHTS (NOMINAL) (measured in mm unless noted)

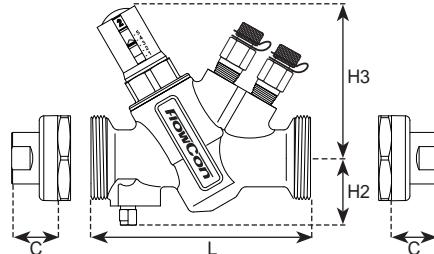

Model no.	Valve size	Cartridge size	L	H1	H2	H3	End connections C <sup>1</sup>			Weight (kgs.) w/o end conn.	Kv <sup>2</sup> (m <sup>3</sup> /hr)
							ISO female	ISO male	Sweat		
ABV1	15	20	122	66	33	78	22	25	20	0.8	2.6
	20						22	25	20		
	25						N/A	39	22		
ABV2	25	40	162	75	42	99	35	40	34	2.5	12.5
	32						33	40	37		
	40						33	42	N/A		

Note 1: Add end connection length to body length.

Note 2: For valve body.

FlowCon ABV with composite cartridge

FlowCon ABV with E-JUST cartridge

## MODEL NUMBER SELECTION<sup>3</sup>

Insert body size:

1=ABV1 (union end 15/20/25mm) 2=ABV2 (union end 25/32/40mm)

Leave it blank if taps open B=pressure temperature plugs P=taps plugged

Insert inlet x outlet union end connections:

Body size	Female threaded	Male treaded	Sweat
Union end 15-20mm, 1 1/2"-1" with 20mm composite cartridge or 20mm E-JUST cartridge	E=15mm=1 1/2" F=20mm=3/4"	H=15mm=1 1/2" I=20mm=3/4" J=25mm=1"	K=15mm L=18mm M=22mm
Union end 25-40mm, 1"-1 1/2" with 40mm composite cartridge or 40mm E-JUST cartridge	G=25mm=1" P=32mm=1 1/4" Q=40mm=1 1/2"	J=25mm=1" S=32mm=1 1/4" T=40mm=1 1/2"	N=28mm W=35mm

Insert connection standard:

I=ISO N=NPT

Insert a kPaD control range:

O if no cartridge required

Y=15-130 kPaD (20mm standard composite cartridge)

17-200 kPaD (20mm E-JUST red - white pawl)

17-210 kPaD (20mm E-JUST black or green - white pawl)

17-400 kPaD (40mm E-JUST - white pawl)

G=30-400 kPaD (20mm standard composite cartridge)

30-400 kPaD (20mm E-JUST red - grey pawl)

35-400 kPaD (20mm E-JUST black or green - grey pawl)

X=15-130 kPaD (40mm standard composite cartridge)

C=22-300 kPaD (40mm standard composite cartridge)

D=30-410 kPaD (40mm standard composite cartridge)

(Determine from cartridge selection chart)

Insert automatic flow limiting cartridge code:

O if no cartridge required

Y=grey R=red U=blue B=black G=green W=white

(Determine from cartridge selection chart)

Example: ABV1.B.E.I.Y.B.E=ABV1-body with p/t plugs, 15mm ISO female threaded union end connections with a Y-type black E-JUST cartridge.

Note 3: Flow rate, color and dial setting of cartridge are indicated on label affixed to body.

## FLOW RATE SETTING - COMPOSITE CARTRIDGE - FOR VALVES DN15-DN25 SMALL

20mm · 3/4" · composite cartridge · Y-type

0.163	586	2.58	4.8
0.166	598	2.63	4.9
0.169	609	2.68	5.0

Accuracy: Greatest of either ±5% of controlled flow rate or ±2% of maximum flow rate

Use the FlowCon adjustment key (part number ACC0001) for adjusting the flow rate.

A setting of 4.2 corresponds to a flow rate of 0.144 l/sec for the 20mm green cartridge, range 17-210 kPaD.

Accuracy: Greatest of either  $\pm 5\%$  of controlled flow rate or  $\pm 2\%$  of maximum flow rate

Use the FlowCon adjustment key (part number ACC0001) for adjusting the flow rate.

A setting of 4.2 corresponds to a flow rate of 1.45 l/sec for the 40mm cartridge, range 17-400 kPaD.

## ACCESSORIES

- P/t plugs: 2 x ACC00101
- Blind cap: ACC0080 / ACC0081 (cap (small / medium) without a cartridge for flushing out the system)
- Adjustment key: ACC0001 (key for adjusting the flow rate on E-JUST cartridges and turning the ball valve).

## GENERAL SPECIFICATIONS

### 1. AUTOMATIC BALANCING VALVES WITH INTEGRAL ISOLATION BALL VALVE - FLOWCON ABV

- 1.1. Contractor shall install automatic balancing valves where indicated in drawings.
- 1.2. Valve shall consist of dynamic, accessible, adjustable flow limiting device and integral isolation ball valve.

### 2. VALVE HOUSING AND BALL VALVE

- 2.1. Valve housing shall consist of forged brass ASTM CuZn40Pb2, rated at no less than 2500 kPa static pressure and +120°C.
- 2.2. Valve ball shall consist of chemically nickel plated brass (ASTM CuZn40Pb2).
- 2.3. Valve housing shall be permanently marked to show direction of flow.
- 2.4. Valve housing shall be double union end constructed with a range of pipe connections available for the appropriate pipe size.
- 2.5. Optional dual pressure/temperature test plugs for verifying accuracy of flow performance shall be available for all valve sizes.
- 2.6. Housing shall be configured for flow regulation unit accessibility.

### 3.a. FLOW REGULATOR / AUTOMATIC BALANCING UNIT / COMPOSITE CARTRIDGE

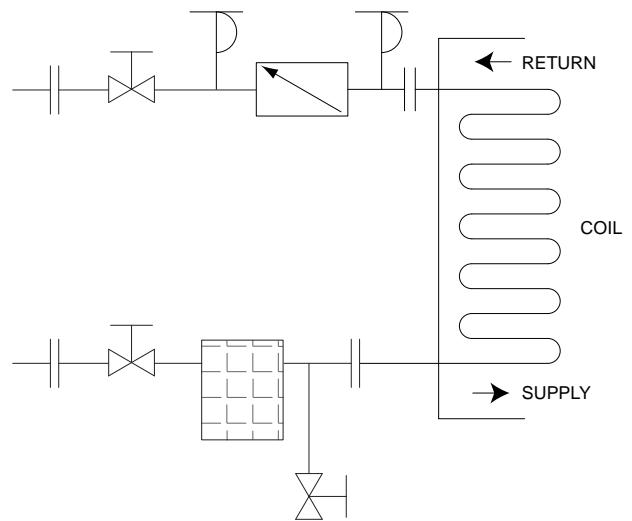

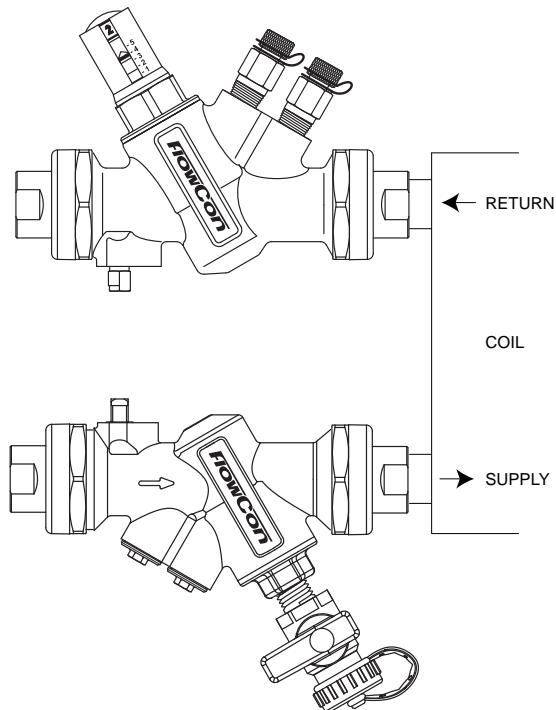

- 3.a.1. Flow regulation unit assembly shall be manufactured of polyoxymethylene with a hydrogenated acrylonitrile-butadiene rubber or EPDM diaphragm and stainless steel 18-8 spring.
- 3.a.2. Flow regulation unit shall be readily accessible for change-out or maintenance.
- 3.a.3. Flow regulation unit shall be adjustable to 1 of 8 different flow rates; shall be available in 2 different kPaD operational ranges for DN15/20/25 and 3 different kPaD operational ranges for DN25/32/40; minimum range shall be capable of being activated by minimum 15 kPaD. Further, the flow regulation unit shall be capable of controlling flow within ±10% of rated flow rate or 20l/hr.
- 3.a.4. Identification tags shall be available for all valves; tags shall be indelibly marked with flow rate, color and dial setting.

OR...

### 3.b. FLOW REGULATOR / AUTOMATIC BALANCING UNIT / E-JUST CARTRIDGE

- 3.b.1. Flow regulation unit assembly shall be manufactured of polysulfone with a hydrogenated acrylonitrile-butadiene rubber or EPDM diaphragm and stainless steel 18-8 spring.
- 3.b.2. Flow regulation unit shall be readily accessible for change-out or maintenance.
- 3.b.3. Flow regulation unit shall be adjustable with the valve in-line and the system in operation.
- 3.b.4. Flow regulation unit shall be externally adjustable to 1 of 41 different flow rates; shall be available in 4 different kPaD operational ranges for DN15/20/25 and 1 kPaD operational ranges for DN25/32/40; minimum range shall be capable of being activated by minimum 17 kPaD. Further, the flow regulation unit shall be capable of controlling flow within ±5% of rated flow or ±2% of maximum flow.
- 3.b.5. Identification tags shall be available for all valves; tags shall be indelibly marked with flow rate, color and dial setting.

# FlowCon SH

*Externally Adjustable Dynamic Balancing Valve*

# FlowCon SH

*Externally Adjustable Dynamic Self Balancing Valve*

The FlowCon SH series of valves are dynamic flow controls which automatically limit the rate of flow to a pre-set, adjustable maximum.

Used as automatic/dynamic hydraulic balancing valves in multi circuit HVAC systems the more common applications include multiple fan coils, radiators and heat pumps. They can also be used in limiting the flow to individual heat exchangers or domestic water tanks.

Due to the fact that the FlowCon SH valves are externally adjustable, the desired maximum flow rate can be easily changed while the system is operating.

## Features and Benefits

- **Automatic flow control**, balance is achieved automatically eliminating the need for manual balancing devices.
- **Easy flow rate setting selection**, determined by one flow rate table without the need of external measurements.
- **Easy adjustment** without disturbing the balance in the rest of the system.
- **51 distinct flow rate settings** per valve size and control range.
- **Accuracy:** Greatest of either  $\pm 5\%$  of controlled flow rate or  $\pm 2\%$  of maximum flow rate.
- **Tamper-proof**, adjustment unit is being operated by means of special FlowCon key.
- **Pressure/temperature measurement plugs** available for verifying operating pressure differential range.
- **Double union end connection** with a wide selection of end fittings, or **double flange connection** for ease of installation.

## Adjustment

The internal mechanism is adjusted by an operation key which also turns the display mechanism. The numeric display shows two scales; one black reflecting full turns numbered 1 through 6, and one red reflecting tenths of full turns numbered 0 through 9. The number of turns reflects the flow rate selected (pls. see specific tech note for exact flow rates and settings).

After the flow rate is set, the valve automatically registers the system pressure conditions and adjusts its orifice area to limit the flow rate to the selected maximum. As system pressure conditions change, the valve will automatically adjust to maintain the selected flow rate. This eliminates the need to know exactly the distribution of pressure within a system.

Because of this dynamic reacting feature, one or more of the valves in the system can be re-adjusted without upsetting the other circuits.

The flow rate through the valve can be verified by reading the pressure differential across the valve. The pressure test ports can be supplied with optional pressure/temperature test plugs for connecting conventional mechanical gauges or electronic sensors.

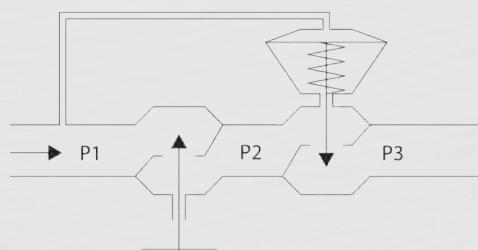

#### Principle of Operation

The FlowCon SH valves contain a diaphragm component mounted on a counter-acting spring which adjusts the pressure differential across a pre-set valve opening. The combined components operate very similar to two valves in series, where one is a pressure differential regulator and one an adjustable orifice. This is illustrated below.

#### Principle of Construction

On the below drawings P1 and P3 are system pressure, P1-P3 is the total pressure drop across the valve. P2 is set by the diaphragm acting in reaction to P1 in the lower diaphragm chamber. Interacting with the spring, P1-P2 remains constant, keeping a constant  $\Delta P$  across the orifice areas. The result is a constant flow rate through the valve, independent of pressure fluctuations.

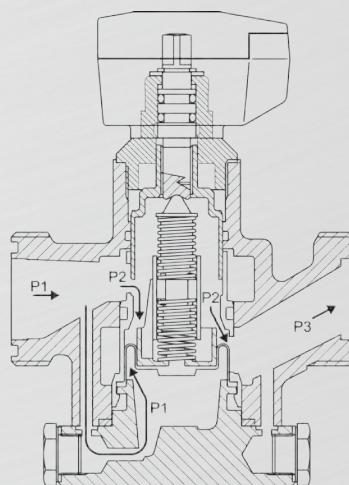

#### Installation

Contrary to traditional static balancing systems, dynamic balancing requires no main branch balancing valves. If a FlowCon SH valve is used at each terminal, the total flow rate of the branch will automatically be limited to the sum of the flow rates of the circuits.

The FlowCon SH valve can either be installed in the supply or return line. The valve should be positioned for easy access to the adjustment and pressure measurement devices. Unlike traditional balancing valves, placement of the FlowCon SH does not require lengths of pipe before or after the valve.

#### End Fittings

The FlowCon SH valves are available with optional union connections with a range of different end fittings. The end fittings are available in any combination of size and standard. Larger sizes are for flange connection (pls. see tech notes for further information).

### Flow Verification

Optional pressure/temperature test plugs are available for verifying the differential pressure across each FlowCon SH valve. They are fitted into 1/4" NPT female threaded ports. With the p/t plugs fitted, a pressure differential reading across the valve can be taken.

### Flow Rate Setting

For adjusting the flow rate of the FlowCon SH valves use the special designed key (FlowCon part no. ACC0001). As an example, a micrometer setting at 2.4 corresponds to a flow rate of 0.29 l/sec for the valve in size 15/20/25.

### Technical Data

For further information please see FlowCon tech note. For latest updates please see [www.flowcon.com](http://www.flowcon.com).

Accuracy: Greatest of either ±5% of controlled flow rate or ±2% of maximum flow rate.

Use the special key (FlowCon part no. ACC0001) for micrometer setting.

A micrometer setting at 2.4 as illustrated above corresponds to a flow rate of:

0.29 l/sec (for valve size DN15/20/25)  
0.99 l/sec (for valve size DN25/32/40)

## ACCESSORIES

- Adjustment key, ACC0001
- Pressure/temperature plugs 1/4", 2 x ACC00101

## GENERAL SPECIFICATIONS

### 1. DYNAMIC BALANCING VALVES - FLOWCON SH

- 1.1. Contractor shall install dynamic balancing valves where indicated in drawings.
- 1.2. Valve shall consist of dynamic, adjustable flow limiting device.
- 1.3. Flow limiting device shall be externally adjustable with the valve in-line and the system in operation.

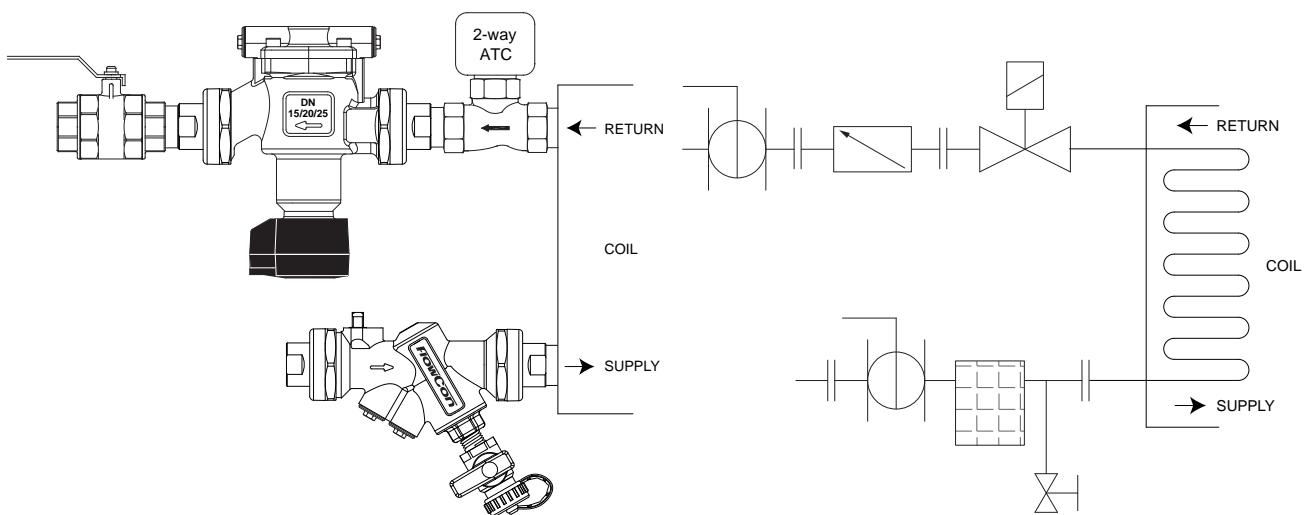

### 2. VALVE HOUSING

- 2.1. Valve housing shall consist of forged brass ASTM CuZn40Pb2, rated at no less than 2500 kPa static pressure and +120°C.
- 2.2. Valve housing shall be permanently marked to show direction of flow.
- 2.3. Valve housing shall be double union construction with a range of pipe connections available for the appropriate pipe size.
- 2.4. Optional dual pressure/temperature test plugs for verifying accuracy of flow performance shall be available for all valve sizes.

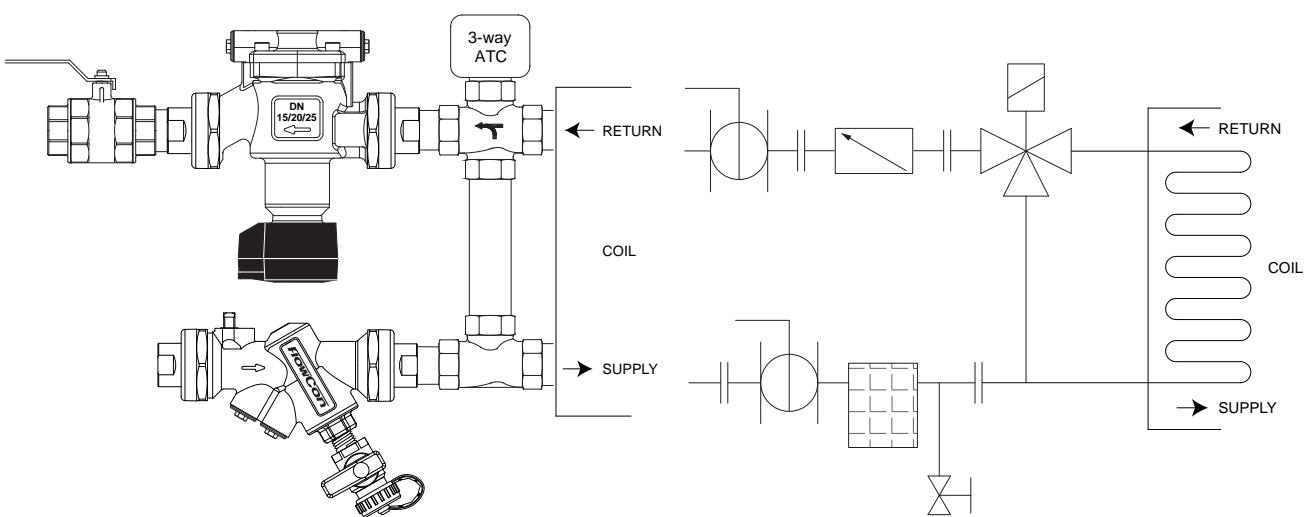

### 3. FLOW REGULATOR / AUTOMATIC BALANCING UNIT

- 3.1. Flow regulation unit shall be manufactured of polysylphone / poly-vinyl-iden-fluoride (depending on size) and hydrogenated acrylonitrile-butadiene-rubber.
- 3.2. Flow regulation unit shall be accessible for maintenance.
- 3.3. Housing shall be configured for external flow regulation unit adjustment to 56 different flow rates and shall be capable of controlling flow within greatest of either ±5% of rated rated flow or ±2% of maximum rated flow.

# FlowCon SH 50-150mm

*Adjustable Dynamic Self Balancing Valve*

## SPECIFICATIONS

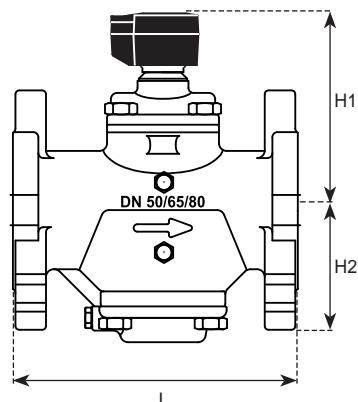

Pressure rating:	4000 kPa / 580 psi
Temperature rating, media:	-20°C to +120°C / -4°F to +248°F
Material:	
- Diaphragm:	Hydrogenated acrylonitrile-butadiene-rubber
- Body:	Ductile iron, ASTM A536-65T, class 60-45-18
- O-rings:	EPDM
- Internal components:	Stainless steel
End connection:	Universal flange connections which can be used with both ISO and ANSI Flanges and mounting kits are not supplied by FlowCon <sup>1</sup>
Body tappings:	1/4" ISO
Maximum close off pressure:	600 kPa / 87 psi
Maximum operational ΔP:	400 kPaD / 58 psid
Flow rate range:	1.48-29.5 l/sec

Note1: 2x16mm studs and 4x16mm bolts with nuts are supplied with SH.3.x.x.x.

## DIMENSIONS AND WEIGHTS (NOMINAL) (measured in mm unless noted)

Model no.	Valve size	L	H1	H2	Weight (kgs.)
SH.3.X	50	224	152	95	14 <sup>2</sup>
	65				
	80				
SH.4.X	80	320	196	135	30
	100				31 (SH.4.3 only)
SH.5.X	125	422	244	180	60
	150				

Note 2: Including studs, bolts and nuts provided with valve.

## MODEL NUMBER SELECTION

Insert valve body size:

3=50-80mm 4=80-100mm 5=125-150mm

Insert dP control range:

0=35-400 kPaD, 5.1-58 psid (SH.3 only)

1=35-400 kPaD, 5.1-58 psid

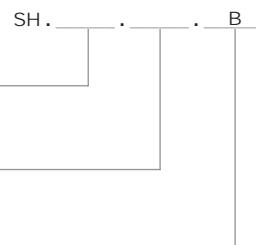

2=60/80-400 kPaD, 8.7/11.6-58 psid

3=60-400 kPaD, 8.7-58 psid (SH.4 only)

Insert p/t plug requirements:

B=p/t plugs (standard)

Example: SH.3.1.B=SH 50-80mm body for 35-400 kPaD with p/t plugs.

## FLANGE MATCH SH HOUSING

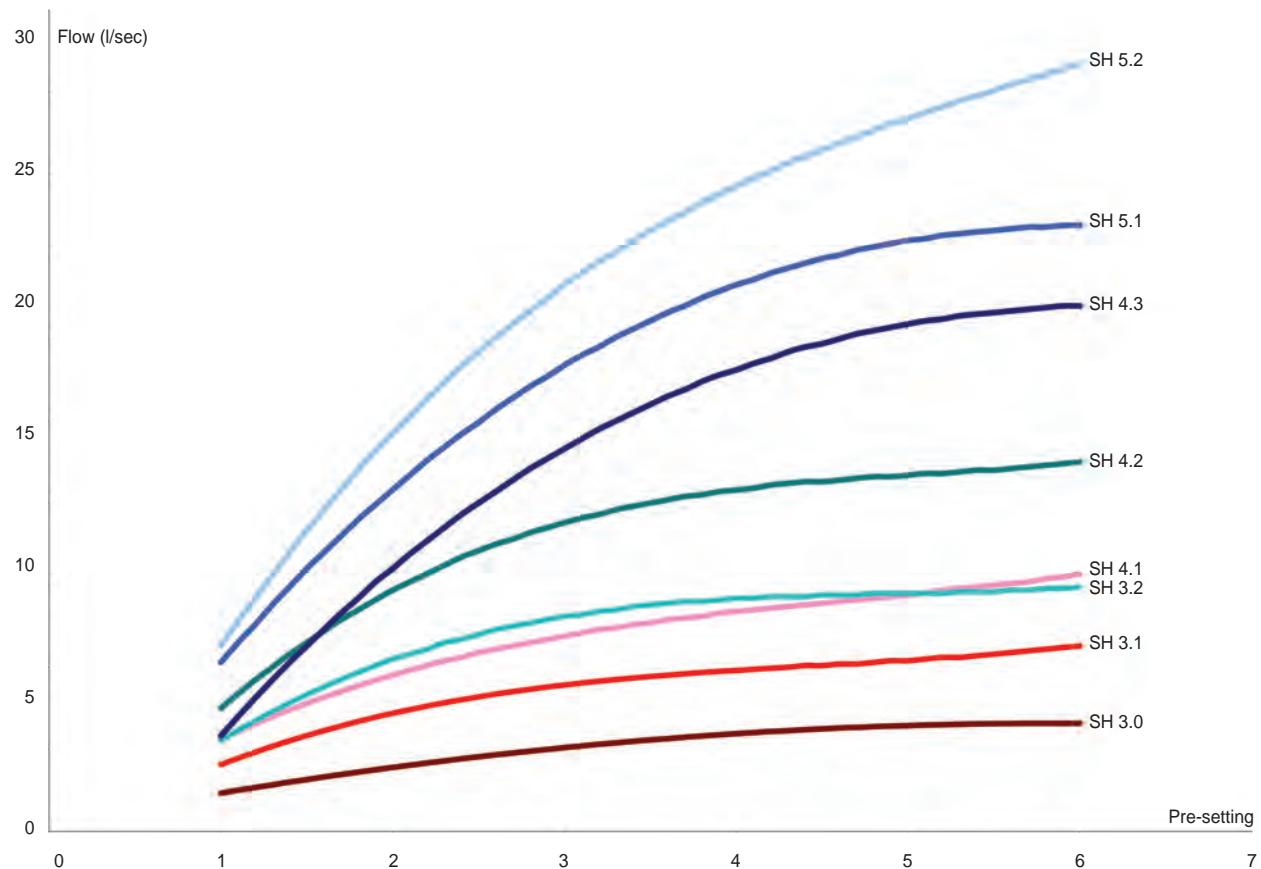

Model no.	Flange size (inch)	ASME B16.5 weld neck flanges		ASME B16.5 slip on flanges		Flange size (mm)	EN1092-1 <sup>3</sup>				EN1092-1 <sup>4</sup>			
		Class 150	Class 300	Class 150	Class 300		PN10	PN16	PN25	PN40	PN10	PN16	PN25	PN40

Use the special key  
(FlowCon part no. ACC0001)  
for micrometer setting.

A micrometer setting at 2.4 as  
illustrated above corresponds  
to a flow rate of:

7.41 l/sec  
- (type 1, range 35-400 kPaD)

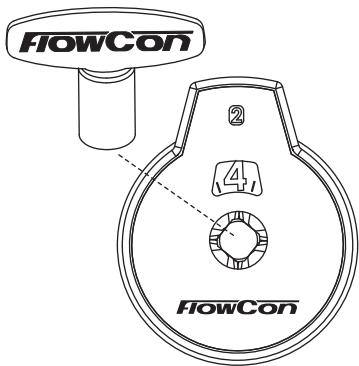

10.5 l/sec  
- (type 2, range 60-400 kPaD)

12.2 l/sec  
- (type 3, range 60-400 kPaD)

Accuracy: Greatest of either ±5% of controlled flow rate or ±2% of maximum flow rate.

## FLOW RATE SETTING - VALVE SIZE DN125 AND DN150

23.3	83800	369	29.5	106000	468	6.0	

Use the special key (FlowCon part no. ACC0001) for micrometer setting.

A micrometer setting at 2.4 as illustrated above corresponds to a flow rate of:

15.3 l/sec (type 1, range 35-400 kPaD)

17.8 l/sec (type 2, range 60-400 kPaD)

Accuracy: Greatest of either  $\pm 5\%$  of controlled flow rate or  $\pm 2\%$  of maximum flow rate.

## ACCESSORIES

- Adjustment key: ACC0001 (key for adjusting the flow rate).

## GENERAL DESCRIPTION

The SH valve series are dynamic self balancing valves that are pressure independent.

The valve self-adjusts for pressure differential and therefore eliminates the need for manual adjustment according to pressure differential after installation as is required with manual balancing valves.

The valve self-adjusts to prevent exceeding design flow setting even as system pressure differential fluctuates with operation while valve is within its pressure differential control range.

Each valve has 51 different flow settings. The valve is wafer body design for installation between flanges.

## GENERAL SPECIFICATIONS

### 1. DYNAMIC BALANCING VALVES - FLOWCON SH

- 1.1. Contractor shall install dynamic balancing valves where indicated in drawings.
- 1.2. Valve shall consist of dynamic, adjustable flow limiting device.
- 1.3. Flow limiting device shall be externally adjustable with the valve in-line and the system in operation.

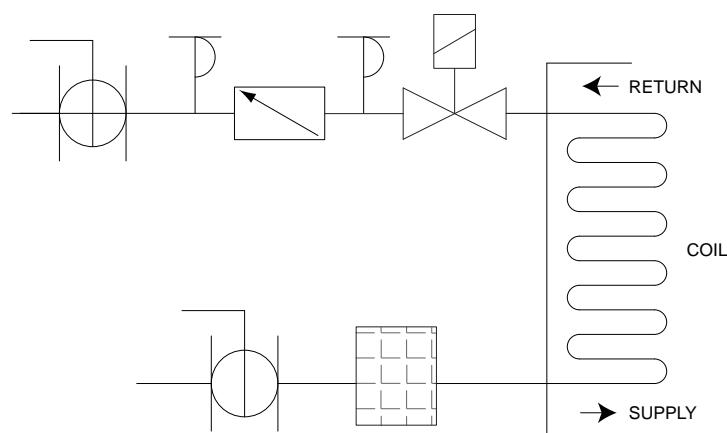

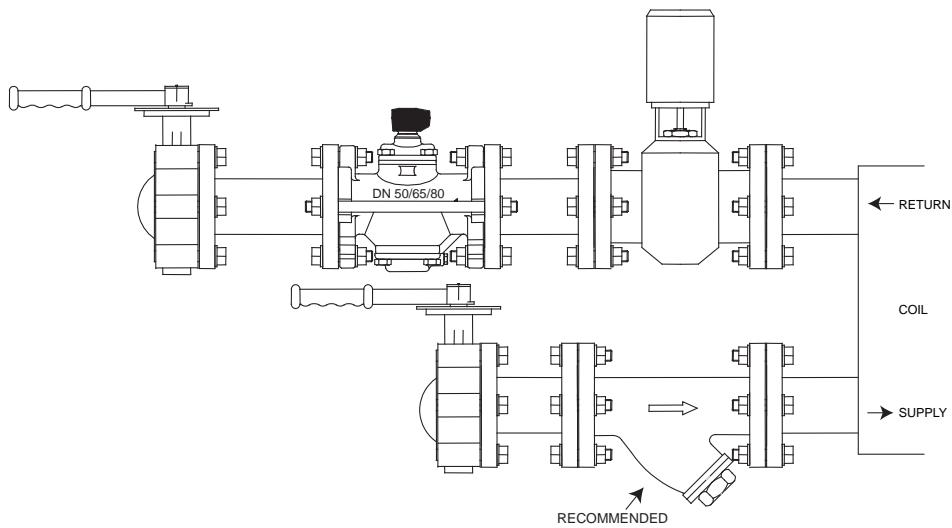

### 2. VALVE HOUSING

- 2.1. Valve housing shall consist of ductile iron ASTM A536-65T, class 60-45-18, rated at no less than 4000 kPa static pressure and +120°C.
- 2.2. Valve housing shall be permanently marked to show direction of flow.
- 2.3. Valve housing shall be for installation between flanges, compatible with ANSI B 16.5 150lb/300lb steel flanges (depending on size) and be compatible to DIN PN10+ flanges according to EN1092-1.
- 2.4. Dual pressure/temperature test plugs for verifying accuracy of flow performance shall be provided for all valve sizes.

### 3. FLOW REGULATOR / AUTOMATIC BALANCING UNIT

- 3.1. Flow regulation unit shall be manufactured of stainless steel and hydrogenated acrylonitrile-butadiene-rubber.
- 3.2. Flow regulation unit shall be accessible for maintenance.
- 3.3. Flow regulation unit shall be adjustable with the valve in-line and the system in operation.
- 3.4. Valve housing shall be configured for external flow regulation unit adjustment to 51 different flow rates and shall be capable of controlling flow with an accuracy of either ±5% of rated flow or ±2% of maximum flow whichever is greatest.
- 3.5. Identification tags shall be available for all valves; tags shall be indelibly marked with part number, production date and pressure differential range.

# FlowCon K

*Automatic Flow Control Valve with Pressure Regulation*

# FlowCon K

## Dynamic Flow Control Valve

The FlowCon K series are designed as a constant flow valve which maintains a specific flow rate independent of pressure fluctuations within a hydronic heating or cooling system. FlowCon K is primarily designed for use in terminal balancing.

The flow rate for the application is selected and FlowCon K does the rest, eliminating time consuming and costly manual balancing. Whether the application is air conditioning or heating, terminal unit or branch balancing, constant or modulating flow, the FlowCon K is the most accurate yet flexible way of balancing any hydronic system completely automatic.

### Features and Benefits

- **Automatic balancing**, the correct flow rate for each circuit is achieved automatically.
- **Dynamic balancing**, the correct flow rate is maintained as each valve compensates for pressure fluctuations in the system.
- **Elimination of branch or "partner" balancing valves** (fewer total valves used in each project).
- **Easily accessible cartridge** for flow rate changing or maintenance.
- **Accuracy** of  $\pm 5\%$ .
- **Pressure/temperature measurement plugs** for verifying operating pressure differential range.

### Selection

In selecting a FlowCon K valve, the following information is needed: 1) flow rate, 2) pressure differential range and 3) pipe size.

### 1) Flow Rate Selection

In determining the flow rate, it must be decided whether the circuit will be a constant flow or modulating system.

If the valve is being fit into a constant flow system, simply select the flow rate from the Flow Rate Selection Chart (pls. see the catalogue: FlowCon Cartridges) closest to the designed rate. If the valve is being installed in variable flow application (used in series with a modulating control valve), simply select the flow rate closest to the designed maximum flow rate of the circuit. The FlowCon K will then limit the flow to that specific maximum flow rate. Below the maximum, the valve will act as a fixed orifice device adding minimal pressure loss to the system. This allows the modulating valve to have authority up to the maximum flow rate designed for that circuit.

For applications controlling the flow of fluids other than water, the specific gravity, viscosity and operating temperature are needed for proper selection. The cartridges are calibrated for water at approximately 16°C. The flow rate of a cartridge may be influenced by fluids with characteristics other than water (e.g. a valve calibrated for 2 l/sec used in an application with water and glycol at a concentration of 25% glycol will have an adjusted nominal flow rate of 1.969 l/sec).

For questions concerning other fluids and temperatures, please contact your FlowCon representative or one of the FlowCon offices.

## 2) Pressure Differential Range Selection

FlowCon K valves are available in four different operational pressure differential ranges, i.e. 10-95 kPaD, 22-210 kPaD, 40-390 kPaD and 90-880 kPaD. This is the pressure differential across the valve itself.

To select which range of operation is applicable for a particular circuit, determine the minimum and maximum pressure drops that the valve will experience during operation. The maximum typically occurs when the other circuits are closed, and the minimum when the other circuits are open. Then select one of the operating ranges which is wider than the range of pressure differential fluctuation calculated.

Verification of the pressure differential across the valve is possible through the optional pressure-/temperature test plugs.

## 3) Size Selection

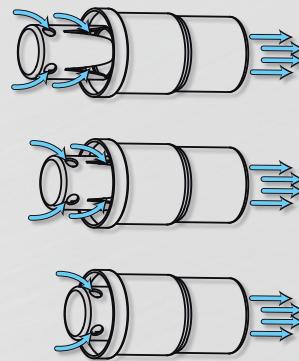

The FlowCon K valves are available in the following sizes: DN15, 20, 25, 32, 40, 50, 65 and 80. Standard FlowCon K valves are fixed female ISO threaded.

### Valve Location

The hydronic function of the valve is not affected by whether it is installed on the supply or return side of the unit. The orientation of the cartridge access should be considered in order to have the ability to change or clear the cartridge of debris if necessary. Similarly, the pressure/temperature plugs should be accessible. It is important that the flow arrow of the valve be pointing in the right direction.

### Principle of Operation

The FlowCon K valve utilizes a specific flow rate cartridge. Below its pressure differential range it acts as a fixed orifice (this allows a modulating valve in the same circuit to operate with valve authority up to the flow rate specified for the FlowCon K).

Within the operating pressure differential range, the effective open orifice area of the cartridge is automatically adjusted to the point where the specified flow rate will be delivered (as the pressure differential increases, the open area closes and as it decreases, the area opens).

When the pressure differential range is exceeded, the valve again becomes a fixed orifice device. This ensures that no part of the system is starved or shut down.

## Technical Data

For further information please see FlowCon tech note and the catalogue: FlowCon Cartridges.

## FLOW RATE TABLE - STAINLESS STEEL INTERNAL PART - FOR 2" VALVES

40mm · 1 1/2" · Stainless Steel Internal Parts - for 2" valves			
Flow #	Flow (GPM)	Flow (l/hr)	Flow (l/sec)
09	12.4	2800	0.780
10	13.6	3090	0.859
12	16.1	3660	1.02
14	18.5	4200	1.17
16	20.8	4720	1.31
18	23.0	5240	1.46
20	25.2	5730	1.59
22	27.4	6220	1.73
24	29.4	6690	1.85
26	31.5	7170	1.99
28	33.5	7600	2.12
30	35.5	8060	2.24
32	37.6	8540	2.37
34	39.6	8990	2.50
36	41.7	9460	2.63
38	43.7	9920	2.76
40	45.8	10400	2.89
42	47.8	10900	3.02
44	49.8	11300	3.15

Accuracy: ±10% of controlled flow rate.

## GENERAL SPECIFICATIONS

### 1. AUTOMATIC BALANCING VALVES – FLOWCON MINI-WAFER

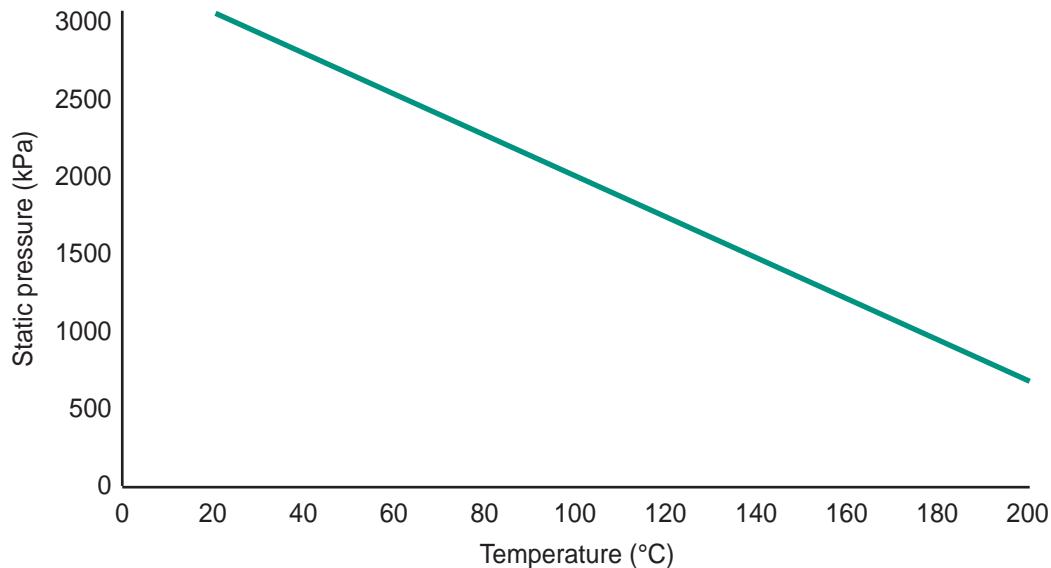

- 1.1. Contractor shall install automatic balancing valves where indicated in drawings.
- 1.2. Valve shall consist of a dynamic, flow limiting device.

### 2. VALVE

- 2.1. Valve shall consist of AISI 316/316L/318LN or equivalent EN Stainless Steel.
- 2.2. Valve housing shall be rated at no less than 3000 kPa (435 psi) static pressure and +200°C (+392°F), but within the below graph.
- 2.3. Valve housing shall be permanently marked to show direction of flow.
- 2.4. Valve housing shall be compatible with Tri-Clover Clamps.

### 3. FLOW REGULATOR / AUTOMATIC BALANCING UNIT

- 3.1. Flow regulation shall be available in 1 kPaD operational range and minimum range shall be capable of being activated by minimum 100 kPaD. The flow regulation shall be capable of controlling flow within ±10% of rated flow.
- 3.2. Indication tags shall be available for all valves; tags shall be indelibly marked with part number and flow rate.

# FlowCon K 15-40mm

**Automatic Balance Valve - Accessible Pre-Set Cartridge**

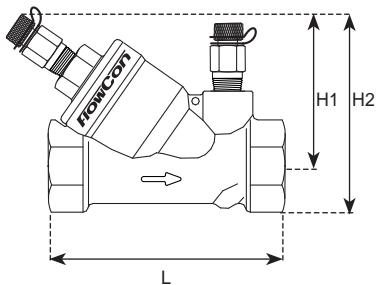

## SPECIFICATIONS

Pressure rating:	2500 kPa / 360 psi
Temperature rating, media:	-30°C to +120°C / -22°F to +248°F
Material:	
- Cartridge:	AISI Type 304 stainless steel
- Body:	AISI Type 17-7 PH stainless steel spring Forged brass ASTM CuZn40Pb2 or DZR brass CW602N CuZn36Pb2AS ("Enkotal®")
- O-rings:	EPDM
End connections:	Fixed female ISO or NPT
Body tappings:	1/4" ISO
Flow rate range:	0.021-2.774 l/sec
Accessory options:	
Strainer:	20 mesh stainless steel

## DIMENSIONS AND WEIGHTS (NOMINAL) (measured in mm unless noted)

Model no.	Valve size	Cartridge size	L	H1	H2	Weight (kgs.)	Kv (m³/hr)
F380.x.E.x.x	15	20	89.0	61.0	74.0	0.5	5
F380.x.F.x.x	20		96.5	63.5	76.2	0.5	7
F380.x.H.x.x	25		105.0	66.0	86.4	0.5	10
F381.x.H.x.x	25	40	150.0	86.4	94.0	1.5	20
F381.x.J.x.x	32		155.0	89.0	107.0	1.5	30
F381.x.K.x.x	40		155.0	89.0	107.0	1.5	30

## MODEL NUMBER SELECTION<sup>1</sup>

Insert body size:

380=15/20/25mm for 20mm cartridge  
381=25/32/40mm for 40mm cartridge

Insert kPaD control range:

0=none 1=10-95 kPaD 2=22-210 kPaD 4=40-390 kPaD 8=90-880 kPaD

Insert type of end connection:

E=15mm F=20mm H=25mm J=32mm K=40mm

Insert p/t plugs requirements:

B=pressure/temperature plugs P=taps plugged O=taps open

Insert type of thread:

Leave it blank if end connection type is NPT  
I=ISO

Insert valve body material:

Leave it blank for standard body material

D=DZR brass

Insert valve cartridge as per selection chart:

Leave it blank if no cartridge required

Example: F381.4.K.B.I.F361444=FlowCon K 40mm ISO female threaded body, standard brass, with p/t plugs and a F361444 cartridge (1.85 l/sec, 40-390 kPaD).

Note 1: Part number and flow rate of cartridge are indicated on label affixed to body.

## ACCESSORIES

- P/t plugs: 2 x ACC00101
- 20 mesh strainer (ACC609000 / ACC609001)

## GENERAL SPECIFICATIONS

### 1. AUTOMATIC BALANCING VALVES - FLOWCON K

- 1.1. Contractor shall install automatic balancing valves where indicated in drawings.
- 1.2. Valve shall consist of a dynamic and accessible flow limiting device.

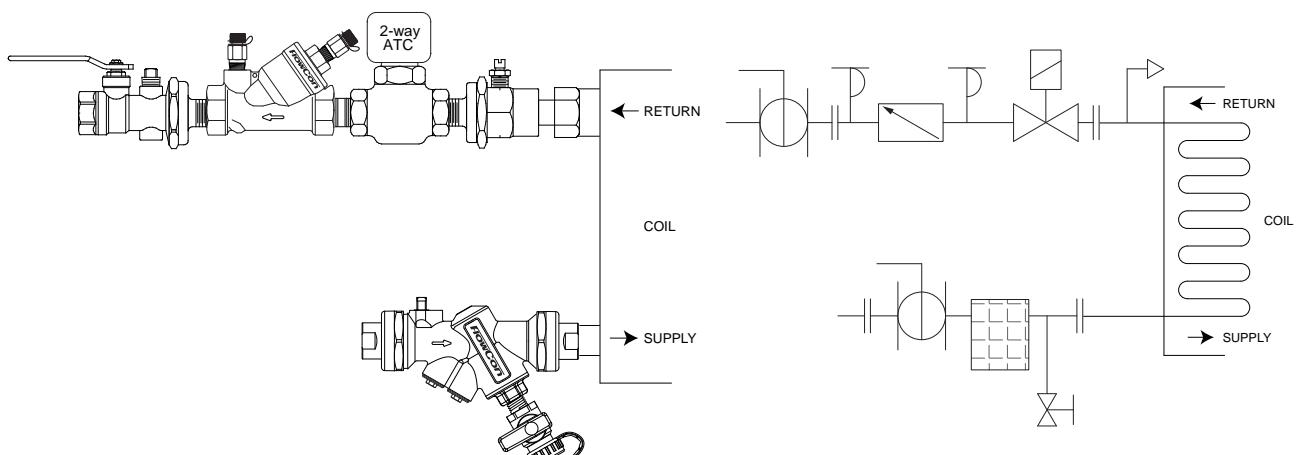

### 2. VALVE HOUSING

- 2.1. Valve housing shall consist of forged brass ASTM CuZn40Pb2 or DZR brass CW602N CuZn36Pb2AS (Enkotal®), rated at no less than 2500 kPa static pressure and +120°C.
- 2.2. Valve housing shall be permanently marked to show direction of flow.
- 2.3. Valve housing shall be ISO female threaded for the appropriate pipe size and shall be configured for flow regulation unit accessibility.
- 2.4. Optional dual pressure/temperature test plugs for verifying accuracy of flow performance shall be available for all valve sizes.

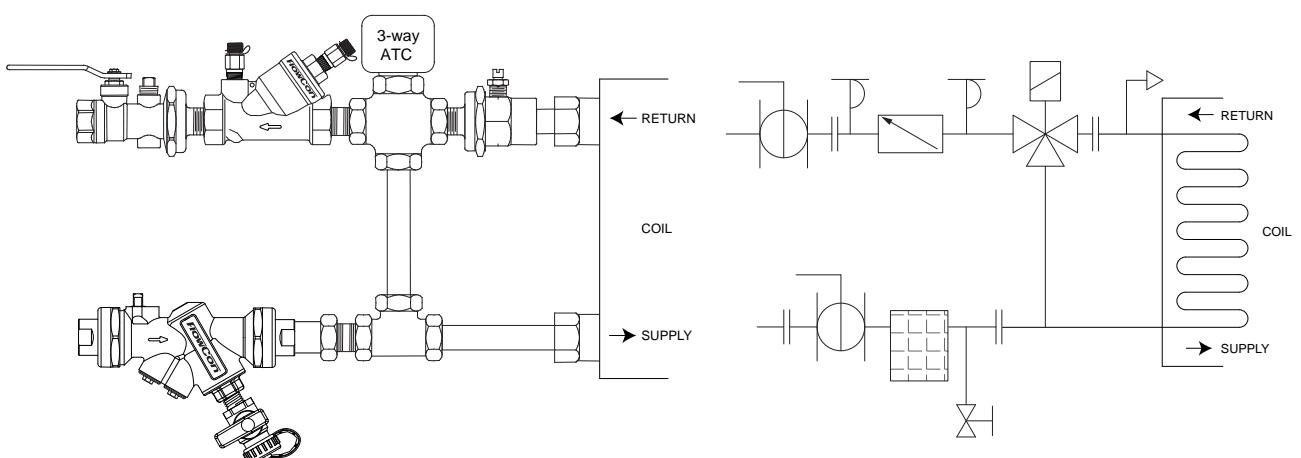

### 3. FLOW REGULATOR / AUTOMATIC BALANCING UNIT

- 3.1. Flow regulation unit assembly shall be manufactured of AISI type 304 stainless steel and stainless steel 17-7 spring.
- 3.2. Flow regulation unit shall be readily accessible for change-out or maintenance.
- 3.3. Flow regulation unit shall be available in 4 different kPaD operational ranges, minimum range shall be capable of being activated by minimum 10 kPaD. Further, the flow regulation unit shall be capable of controlling flow within ±5% of rated flow.
- 3.4. Identification tags shall be available for all valves; tags shall be indelibly marked with part number and flow rate.

*Automatic Balance Valve - Accessible Pre-Set Cartridge*

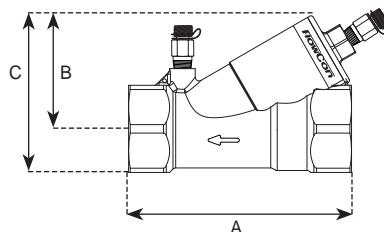

## SPECIFICATIONS

Pressure rating:	1600 kPa / 230 psi
Temperature rating, media:	-30°C to +120°C / -22°F to +248°F
Material:	
- Cartridge:	AISI Type 304 stainless steel
- Body:	AISI Type 17-7 PH stainless steel spring Forged brass ASTM CuZn40Pb2 or DZR brass CW602N CuZn36Pb2AS ("Enkotal®") (DN40-DN50 small) or cast brass (DN50 large-DN80)
- O-rings:	EPDM
End connections:	F382-models: Fixed female ISO F383-models: Fixed female ISO or NPT
Body tappings:	1/4" ISO (DN40-DN50 small) 1/4" NPT (DN50 large-DN80)
Flow rate range:	0.757-10.09 l/sec

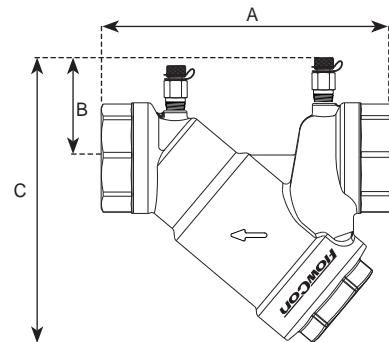

## DIMENSIONS AND WEIGHTS (NOMINAL) (measured in mm unless noted)

Model no.	Valve size	Cartridge size	A	B	C	Weight (kgs.)	Kv (m³/hr)
F382.x.K.x.x <sup>1</sup>	40	50	166	85	114	1.8	35
F382.x.L.x.x <sup>1</sup>	50		174	88	123	2.1	52
F383.x.L.x.x	50	80	226				
F383.x.M.x.x	65		249		216	4.3	65
F383.x.N.x.x	80		259				

Note 1: only ISO available

FlowCon K Model F382

FlowCon K Model F383

## MODEL NUMBER SELECTION<sup>2</sup>

Insert body size:  
382=40/50mm for 50mm cartridge (only ISO)  
383=50/65/80mm for 80mm cartridge

Insert kPaD control range:  
0=none 1=10-95 kPaD 2=22-210 kPaD 4=40-390 kPaD 8=90-880 kPaD

Insert type of end connection:  
K=40mm L=50mm M=65mm N=80mm

Insert p/t plugs requirements:  
B=pressure/temperature plugs P=taps plugged O=taps open

Insert type of thread:  
N=NPT (not available for F382-models)  
I=ISO

Insert valve body material:  
Leave it blank for standard body material  
D=DZR brass (DN40-DN50mm small)

Insert valve cartridge as per selection chart:  
Leave it blank if no cartridge required

Example: F382.2.K.B.I.F3C2248=FlowCon K 40mm ISO female threaded body, standard brass with p/t plugs and a F3C2248 cartridge (1.51 l/sec, 22-210 kPaD).

Note 2: Part number and flow rate of cartridge are indicated on label affixed to body.

Accuracy: ±5% of controlled flow rate.

\* Standard flow, high capacity: the pressure range for these flow rates is 28-135 kPaD  
 \*\* Standard flow, high capacity: the pressure range for these flow rates is 55-210 kPaD.

## GENERAL SPECIFICATIONS

### 1. AUTOMATIC BALANCING VALVES - FLOWCON K

- 1.1. Contractor shall install automatic balancing valves where indicated in drawings.
- 1.2. Valve shall consist of a dynamic and accessible flow limiting device.

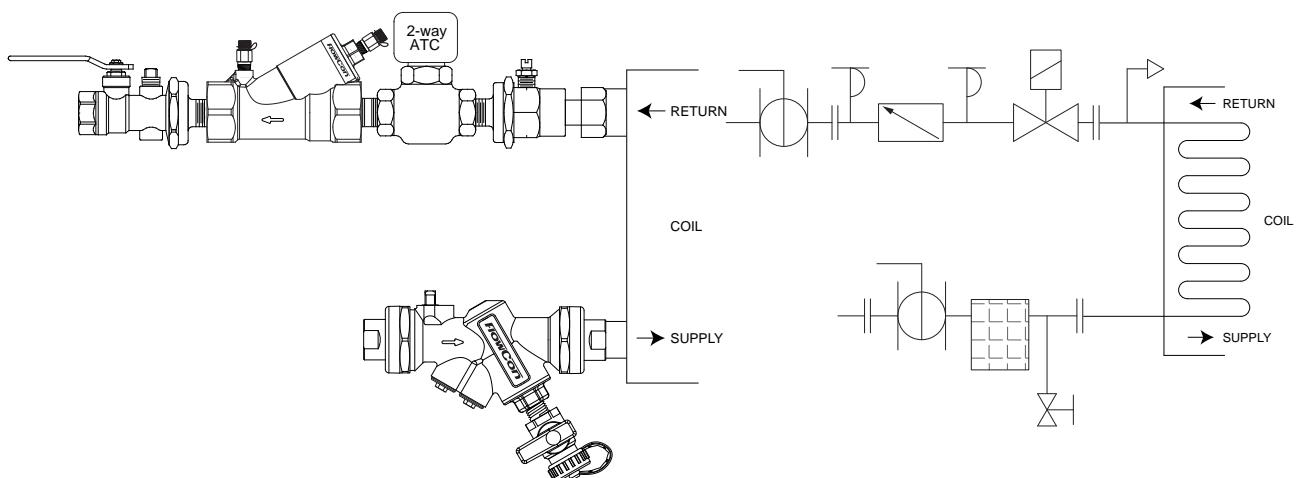

### 2. VALVE HOUSING

- 2.1. Valve housing shall consist of forged brass ASTM (CuZn40Pb2) or DZR brass CW602N CuZn6Pb2AS ("Enkotal®") (FlowCon K DN40-DN50 small) or cast brass (FlowCon K DN50 large-DN80) and be rated at no less than 1600 kPa static pressure and +120°C.
- 2.2. Valve housing shall be permanently marked to show direction of flow.
- 2.3. Valve housing shall be ISO female threaded for the appropriate pipe size and shall be configured for accessibility.
- 2.4. Optional dual pressure/temperature test plugs for verifying accuracy of flow performance shall be available for all valve sizes.
- 2.5. Housing shall be configured for flow regulation unit accessibility.

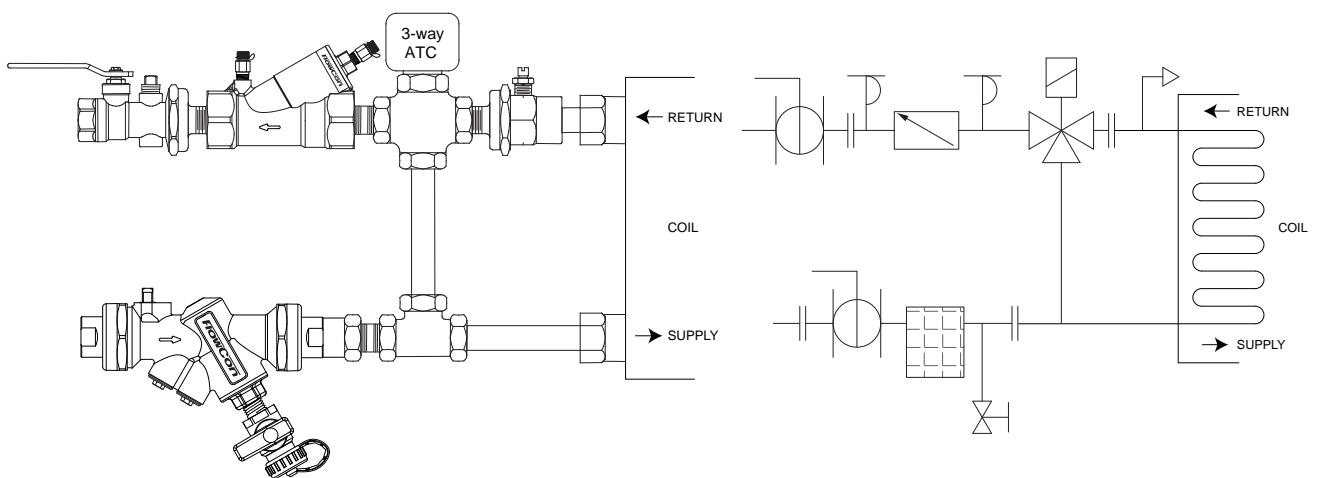

### 3. FLOW REGULATOR / AUTOMATIC BALANCING UNIT

- 3.1. Flow regulation unit assembly shall be manufactured of AISI type 304 stainless steel, and stainless steel 17-7 spring.
- 3.2. Flow regulation unit shall be readily accessible for change-out or maintenance.
- 3.3. Flow regulation unit shall be available in 4 different kPaD operational ranges, minimum range shall be capable of being activated by minimum 10 kPaD. Further, the flow regulation unit shall be capable of controlling flow within ±5% of rated flow.
- 3.4. Identification tags shall be available for all valves; tags shall be indelibly marked with part number and flow rate.

# FlowCon High Flow

*The High Flow Valve Series*

# FlowCon High Flow

*Automatic, Dynamic Balancing Valves*

The FlowCon high flow series of valves are designed to meet the higher capacity flow limiting requirements of pumps, chillers, boilers, condensers, heat exchangers, cooling towers and filters.

## Product Range

The high flow series cover Uni-Flange, AHU-Wafer, Wafer and Grooved End. Applications are many and each product covers several different ones from air handling units and boiler flow control in common HVAC systems over multiple chillers / multiple heat exchangers or pump balancing system in high-rise buildings to fueling, industrial process and filtration applications.

## Features and Benefits

- **Automatic balancing**, the correct flow rate for each circuit is achieved automatically.
- **Dynamic balancing**, the correct flow rate is maintained as each valve compensates for pressure fluctuations in the system.
- **Pre-set stainless steel cartridge(s)** with few moving parts, ensure high reliability.
- **Accuracy** of  $\pm 5\%$ .
- **Wide range of sizes and flow rates**, max. 900mm and 1222.2 l/sec.
- **Pressure / temperature measurements plugs** for verifying operating pressure differential range.

## Principle of Operation

The FlowCon high flow valves utilize precision calibrated stainless steel flow rate cartridges to achieve the desired flow rate. Each cartridge is manufactured to deliver a specific flow rate over a wide operating range of differential pressures at a tolerance of  $\pm 5\%$ . This is done by automatically adjusting the open orifice area of the cartridge in reaction to change in pressure.

High flow valves requiring more flow than achieved by a single cartridge, utilize multiple cartridges mounted in parallel into webbing within the valve body. The sum of the flow rates of the cartridges within any valve equals the total flow rate for the valve. For instance a 150mm (6") wafer containing four cartridges, i.e. two at 4.00 l/sec and two at 5.05 l/sec, will have a total flow rate of 18.1 l/sec.

As shown in the picture on next page, the cartridge is simply a fixed orifice device below its pressure differential range. This allows a modulating valve in the same circuit to operate with valve authority up to the flow rate specified.

Once in the pressure differential range, the spring mounted cup of the cartridge actually slides within the cartridge housing adjusting the effective open orifice area of the cartridge to the exact point, where the specified flow rate will be delivered. As the pressure differential across the valve increases, the orifice area closes; as it decreases, the orifice area opens. In multi-cartridge valves, all cartridges will operate simultaneously.

When the pressure differential range is exceeded, the valve again becomes a fixed orifice device. This ensures that, even under extreme conditions, no part of the system is starved or shut down.

### Selection

In selecting a FlowCon high flow valve, the following information is needed: 1) flow rate, 2) pressure differential range and 3) pipe size.

#### 1) Flow Rate Selection

In determining the flow rate, it must be decided whether the circuit will be a constant flow or modulating system.

If the valve is being fit into a constant flow system, simply select the flow rate from the Flow Rate Selection Chart (see FlowCon tech notes or the Inserts/Cartridge Catalogue) closest to the designed rate. If the valve is being installed in a variable flow application (used in series with a modulating control valve), simply select the flow rate closest to the designed maximum flow rate of the circuit. The FlowCon high flow valve will then limit the flow to that specific maximum rate. Below the maximum, the valve will add minimal pressure loss to the system. This allows the modulating valve to have authority up to the maximum flow rate designed for that circuit.

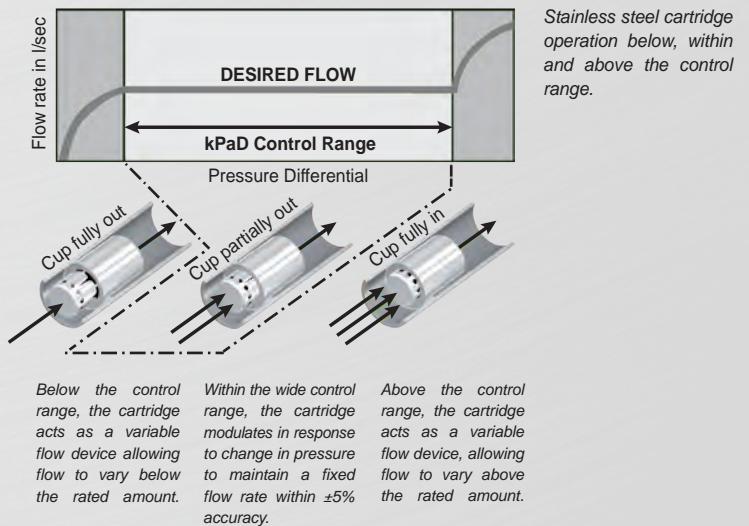

For applications controlling the flow of fluids other than water, the specific gravity, viscosity and operating temperature are needed for proper selection. The flow rate cartridges are calibrated for water at approximately 16°C. For questions concerning other fluids and temperatures, please contact your FlowCon representative or one of the FlowCon offices.

#### 2) Pressure Differential Range Selection

The high flow valves are available in four different operational pressure differential ranges, 10-135 kPaD, 22-210 kPaD, 40-390 kPaD and 90-880 kPaD. This is the pressure differential across the valve itself.

To select which range of operation is applicable for a particular circuit, determine the minimum and maximum pressure drops that the valve will experience during operation. The maximum typically occurs when the other circuits are closed, and the minimum when the other circuits are open. Then select one of the operating ranges which is wider than the range of pressure differential fluctuation calculated. In most heating and air conditioning systems either 22-210 kPaD or 40-390 kPaD are sufficient.

Verification of the temperature, pressure and pressure differential across the valve is possible through the pressure / temperature test plugs.

### 3) Size Selection

The FlowCon high flow valves are available in sizes from DN50 to DN900 depending on type. All high flow types are for use with either flanges or grooved end clamps. The size of the valve in some applications may be dependent on the flow rate required. If a FlowCon valve larger than the system pipe size is selected, a reducing flange are required.

### Valve Location

The hydronic function of the valve is not affected by whether it is installed on the supply or return side of the unit, and the valves may be installed either horizontally or vertically. It is, however, important that the flow arrow of the valve be pointing in the flow direction. Flow in the "wrong" direction will not be controlled. The orientation of valve should allow for access to the test plugs. Extensions are available for use in insulated applications.

### Applications

Energy efficient heating and cooling systems require accurate flow control to ensure proper operation of primary plant equipment. The FlowCon high flow valves have been specifically designed to control flow and solve balancing problems in such large hydronic systems. Under typical conditions in such a system, pressures may vary by 350 kPa to 700 kPa as pumps are switched on or circuits are isolated. A dynamic reacting valve is required to safeguard equipment and ensure that flow through every active circuit remains constant and predictable.

### Technical Data

Accuracy: ±5% of controlled flow rate.

\* Standard flow, high capacity: the pressure range for these flow rates is 28-135 kPaD (4-20 psid).  
 \*\* Standard flow, high capacity: the pressure range for these flow rates is 55-210 kPaD (8-32 psid).

## GENERAL SPECIFICATIONS

### 1. AUTOMATIC BALANCING VALVES - FLOWCON AHU-WAFER

- 1.1. Contractor shall install automatic balancing valves where indicated in drawings.
- 1.2. Valve shall consist of a dynamic, flow limiting device.

### 2. VALVE HOUSING

- 2.1. Valve housing shall consist of ductile iron ASTM A536-80, class 60-40-18, rated at no less than 2500 kPa static pressure and +135°C.
- 2.2. Valve housing shall be permanently marked to show direction of flow.
- 2.3. Dual pressure/temperature test plugs for verifying accuracy of flow performance shall be provided for all valve sizes.
- 2.4. Valve housing shall be compatible with ANSI B 16.5 150 lb/300 lb steel flanges (depending on size) and be compatible to DIN PN10+ flanges according to EN1092-1.

### 3. FLOW REGULATOR / AUTOMATIC BALANCING UNIT

- 3.1. Flow regulation unit assembly shall be manufactured of AISI type 304 stainless steel and stainless steel 17-7 spring.
- 3.2. Flow regulation unit shall be available in 4 different kPaD operational range; minimum range shall be capable of being activated by minimum 10 kPaD. Further, the flow regulation unit shall be capable of controlling flow within ±5% of rated flow.
- 3.3. Identification tags shall be available for all valves; tags shall be indelibly marked with part number and flow rate.

# FlowCon Wafer 100-900mm

*Automatic Balancing Valve - Pre-Set Cartridge(s)*

## SPECIFICATIONS

Pressure rating:	3400 kPa / 493 psi
Temperature rating, media:	-20°C to +175°C / -4°F to +347°F
Material:	
- Cartridge:	AISI Type 304 stainless steel AISI Type 17-7 PH stainless steel spring
- Body:	Ductile iron ASTM A536, class 60-40-18/EN-GJS-400-18
Body tappings:	1/4" NPT
End connections:	Sizes: 100-250mm and 350-900mm: EN1092-1, PN25+ 300mm: EN1092-1, PN40+ 4"-8", 12"-18" and 32"-36": ANSI B 16.5 150lb class flanges+ 10" and 20"-30": ANSI B 16.5 300lb class flanges+ Flanges are not supplied by FlowCon Studs and nuts are available upon request
Flow rate range:	0.883-1222.2 l/sec

Note 1: Smallest pressure class flange fitting.

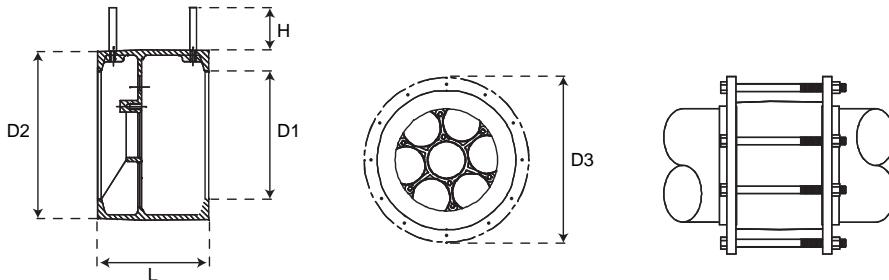

Note 2: Nominal weight, including cartridges and packing material, exact weight is dependent on cartridges.

Note 3: Fits PN25 and PN40 flanges with M18 studs or studs from ACC3320BD25.

Note 4: Hi-flow cartridges does not fit in this wafer size.

Note 5: 450mm and larger supplied with eyebolt for lifting.

Note 6: According to ASME B16.47 series A.

## MODEL NUMBER SELECTION<sup>7</sup>

Insert body size:

32=100mm, 4" 34=150mm, 6" 37=200mm, 8" 68=250mm, 10"  
69=300mm, 12" 39=350mm, 14" 84=400mm, 16" 85=450mm, 18"  
38=500mm, 20" 86=600mm, 24" 30=800mm, 30"/32" 70=900mm, 36"

Insert a kPaD control range:

0=None

STANDARD/HI-CAP: 1=10-135 kPaD and 28-135 kPaD 2=22-210 kPaD and 55-210 kPaD 4=40-390 kPaD 8=90-880 kPaD

HI-FLOW<sup>8</sup>: 3=20-125 kPaD 5=35-220 kPaD

Insert p/t plug requirement:

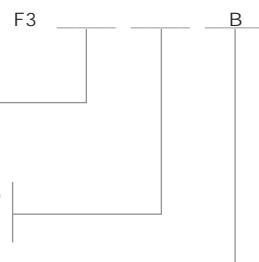

B=Pressure/temperature plugs

Example: F3370B=Wafer for 200mm flanges with p/t plugs and no cartridges.

Note: Please specify flow requirements as per selection chart when ordering with cartridges.

Note 7: Model no. and flow rate are indicated on label affixed to body.

Note 8: Not possible for DN100.

## GENERAL SPECIFICATIONS

### 1. AUTOMATIC BALANCING VALVES - FLOWCON WAFER

- 1.1. Contractor shall install automatic balancing valves where indicated in drawings.
- 1.2. Valve shall consist of a dynamic, flow limiting device.

### 2. VALVE HOUSING

- 2.1. Valve housing shall consist of ductile iron ASTM A536-65T, class 60-45-18, rated at no less than 3400 kPa static pressure and +175°C.
- 2.2. Valve shall be permanently marked to show direction of flow.
- 2.3. Dual pressure/temperature test plugs for verifying accuracy of flow performance shall be provided for all valve sizes.
- 2.4. Valve housing shall be compatible with ANSI B 16.5 150lb/300lb steel flanges (depending on size) and be compatible to DIN PN25+/PN40+ flanges (depending on size) according to EN1092-1.
- 2.5. Sizes 450mm and larger supplied with eyelet bolt for lifting.

### 3. FLOW REGULATOR / AUTOMATIC BALANCING UNIT

- 3.1. Flow regulation unit assembly shall be manufactured of AISI type 304 stainless steel and stainless steel 17-7 spring.
- 3.2. Flow regulation unit shall be available in 4 different kPaD operational range; minimum range shall be capable of being activated by minimum 10 kPaD. Further, the flow regulation unit shall be capable of controlling flow within ±5% of rated flow.
- 3.3. Identification tags shall be available for all valves; tags shall be indelibly marked with part number and flow rate.

# FlowCon Uni-Flange Valve 65-80mm

*Automatic Flow Control - Accessible Pre-Set Cartridge(s)*

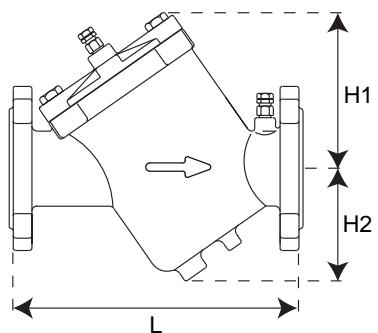

## SPECIFICATIONS

Pressure rating:	1030 kPa / 149 psi
Temperature rating:	+135°C / +275°F
Material:	
- Cartridge:	AISI Type 304 stainless steel
- Body:	AISI type 17-7 PH stainless steel spring
- O-rings:	Ductile iron ASTM A5236-80 class 50-40-18
End connections:	EPDM
Body tappings:	ANSI 150 lb. flanges 2 1/2" and 3"
Assembly:	1/4" NPT with p/t plugs
Flow rate range:	Valve comes fully assembled
	0.757-21.577 l/sec
Options:	Two 1/4"-1 1/4" p/t extensions
	Drain valve
Isolation options:	Butterfly valve

## DIMENSIONS AND WEIGHTS (NOMINAL) (measured in mm unless noted)

Model no.	Valve size	Cartridge size	L	H1	H2	Kv <sup>1</sup> (m <sup>3</sup> /H)	Weight (kgs.)
F3UFxxBx	65/80	50	301.5	133.4	109.2	105	12.7

Note 1: Kv-value measured without cartridge.

## MODEL NUMBER SELECTION<sup>2</sup>

Select a kPaD control range:  
0=none 1=10-95 kPaD 2=22-210 kPaD 4=40-390 kPaD 8=90-880 kPaD \_\_\_\_\_

F	3UF				
---	-----	--	--	--	--

Insert isolation option:

B=none (standard)  
M=2 1/2" butterfly  
N=3" butterfly

Insert number of cartridges:

1=1x2" cartridge ("low" flow)  
2=2x2" cartridge ("medium" flow)  
3=3x2" cartridge ("high" flow)

Insert tag requirement:

T=Optional aluminum hanging identification tag: \_\_\_\_\_

Example: F3UF0B2=Uni-Flange valve for 65/80mm flanges with pt plugs and no cartridge or isolation.  
**Note: Please specify flow requirements as per selection chart when ordering with cartridges.**

Note 2: Model no. and flow rate are indicated on label affixed to body.

## FLOW RATE TABLE

## GENERAL SPECIFICATIONS

### 1. AUTOMATIC BALANCING VALVES - UNI-FLANGE VALVE

- 1.1. Contractor shall install automatic balancing valves where indicated in drawings.
- 1.2. Valve shall consist of a dynamic and accessible flow limiting device.

### 2. VALVE HOUSING

- 2.1. Valve housing shall consist of ductile iron ASTM A536-80, Class 50-40-18, rated at no less than 1030 kPa static pressure and +135°C.
- 2.2. Valve housing shall be permanently marked to show direction of flow.
- 2.3. Valve shall be constructed in a one-piece housing.
- 2.4. Dual pressure/temperature test plugs for verifying accuracy of flow performance shall be provided for all valve sizes.
- 2.5. Valve housing shall be compatible with ANSI 150 lb. flanges 65mm (2 1/2") and 80mm (3").
- 2.6. Housing shall be configured for flow regulation unit accessibility.
- 2.7. Butterfly valve shall be available for all valves.

### 3. FLOW REGULATOR / AUTOMATIC BALANCING UNIT

- 3.1. Flow regulation unit assembly shall be manufactured of AISI type 304 stainless steel and stainless steel 17-7 spring.
- 3.2. Flow regulation unit shall be available in 4 different kPaD operational range; minimum range shall be capable of being activated by minimum 10 kPaD. Further, the flow regulation unit shall be capable of controlling flow within ±5% of rated flow.
- 3.3. Identification tags shall be available for all valves; tags shall be indelibly marked with part number and flow rate.

## GENERAL SPECIFICATIONS

### 1. AUTOMATIC BALANCING VALVES - GROOVED END

- 1.1. Contractor shall install automatic balancing valves where indicated in drawings.
- 1.2. Valve shall consist of a dynamic, flow limiting device.

### 2. VALVE HOUSING

- 2.1. Valve housing shall consist of steel pipe, schedule 40 or greater, rated at no less than 2500 kPa static pressure and +95°C.
- 2.2. Valve housing shall be permanently marked to show direction of flow.
- 2.3. Dual pressure/temperature test plugs for verifying accuracy of flow performance shall be provided for all valve sizes.
- 2.4. Valve housing shall be compatible with grooved end clamps.

### 3. FLOW REGULATOR / AUTOMATIC BALANCING UNIT

- 3.1. Flow regulation unit assembly shall be manufactured of AISI type 304 stainless steel and stainless steel 17-7 spring.
- 3.2. Flow regulation unit shall be available in 4 different kPaD operational range; minimum range shall be capable of being activated by minimum 10 kPaD. Further, the flow regulation unit shall be capable of controlling flow within ±5% of rated flow.
- 3.3. Identification tags shall be available for all valves; tags shall be indelibly marked with part number and flow rate.

# FlowCon Inserts/Cartridges

*FlowCon Green Inserts, E-JUST Cartridges,  
Composite Cartridges and Stainless Steel Cartridges*

# FlowCon Green Inserts

## Pressure Independent Control Valves

The FlowCon Green inserts ensure that the design flow will never be exceeded and with the matching modulating actuator any flow rate between closed and design flow is obtainable regardless of pressure fluctuations in the system maintaining 100% authority on the actuator always using full valve stroke independent of pre-set maximum flow.

### Adjustment

The valve is adjusted to a maximum flow rate limit by setting the scale located on the top of the Green insert. The setting indicates one of maximum 41 possible max flow rates, but since the setting is step less, any flow rate in between minimum and maximum is obtainable. The setting is done by means of a special FlowCon key. With the actuator mounted, the pre-setting is "sealed" and the FlowCon Green insert eliminates any flow above the design flow.

For re-adjustment, simply remove power from the actuator and then remove the actuator from the valve. Hereafter dial in a new required maximum flow and re-apply the actuator and re-apply the power.

### Applications

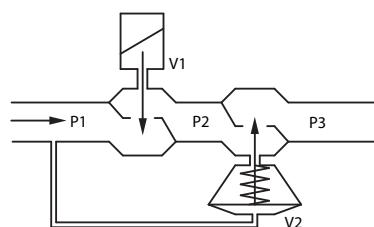

The FlowCon Green inserts can be used with the following FlowCon valves:

- *FlowCon A (DN15/20/25)*
- *FlowCon AB (DN15/20/25/32)*
- *FlowCon ABV1 (DN15/20/25)*
- *FlowCon ABV2 (DN25/32/40)*

### Principle of Insert Operation

On closer examination of the inner workings of the FlowCon Green, the function is best described as 2 valves in 1. The second valve (V2) regulates the pressure differential across the first valve (V1) by means of a rolling diaphragm element counter-acted by a spring. The first valve is a calibrated variable orifice device adjusted by the actuator (similar to a standard modulating control valve).

The diaphragm reacts to the system and regulates the pressure differential across the actuated control valve orifice to maintain its flow rate.

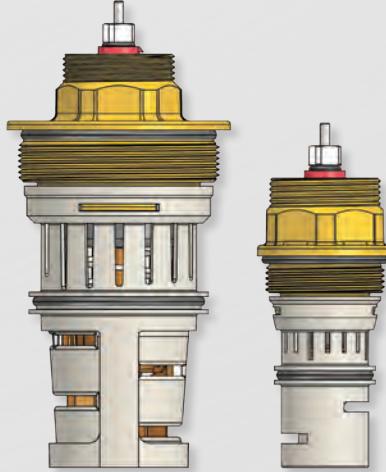

When pre-setting the maximum flow rate, the inlet orifice is changed in size sideways which does not interfere with the length of the stroke. When modulating, the orifice areas are affected by the actuator using the full stroke which results in the fact that the orifice area is changed in size in a vertical movement.

# FlowCon E-JUST Cartridges

*Externally Adjustable Flow Rate Cartridges for FlowCon Valves*

The E-JUST automatic flow rate cartridges ensure that the design flow will not be exceeded regardless of pressure fluctuations in the system.

## Adjustment

By means of a specially designed key each cartridge can be easily adjusted to one of 41 different flow rates. Adjustment is managed externally without isolating the valve or removing the cartridge from the system, which means that the desired maximum flow rate can be set while the system is operating.

The adjustment key turns the display mechanism and the graduation on the 'handle' of the cartridge shows the setting indicated by two scales; one black reflecting full turns numbered 1 through 5, and one red at the top reflecting tenths of full turns numbered 0 through 9. The number of turns reflects the flow rate selected (please see the next 5 pages in this brochure). The color of the pawl shows the selected control range, e.g. white = 17-210 kPaD for the 20mm black and green cartridges.

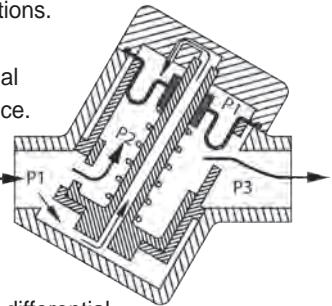

The FlowCon E-JUST cartridge is tamper-proof since the adjustment is operated by means of the mentioned special key. Further, the setting can be protected with a colored top cover. The color of the cover and the o-ring on the spindle under the cover indicates the color and flow range of the cartridge, e.g. red for flow rates between 0.113-0.352 l/sec,  $\Delta P$  30-400 kPaD (grey pawl). E-JUST cartridges size 40mm and 50mm will, as standard, always be with a black cover and black o-ring, as only one type per size is available.

## Principle of Cartridge Operation

The principle of operation is shown below. P1 and P3 are system pressures. P1-P3 is the total pressure drop across the valve. P2 is set by the diaphragm acting

in reaction to P1 in the upper diaphragm chamber. Interacting with the spring, P1-P2 remains constant, keeping a constant  $\Delta P$  across the orifice areas. The result is a constant flow rate through the valve, independent of pressure fluctuations.

Below its pressure differential range, it acts as a fixed orifice. This allows a control valve in the same circuit to operate with valve authority up to the specified flow rate.

Within the defined pressure differential regulation range the pump supplies sufficient pressure to affect the spring and diaphragm in the cartridge.

In case the differential pressure is higher than the defined max.  $\Delta P$  for the cartridge, the diaphragm may be damaged.

## Applications

The 20mm, 40mm and 50mm E-JUST cartridges can be used with the following FlowCon valves:

### 20mm E-JUST:

- FlowCon A (DN15/20/25)
- FlowCon AB (DN15/20/25)
- FlowCon ABV1 (DN15/20/25)
- FlowCon EVC (DN15/20)
- FlowCon ABM1 (DN15/20/25)

### 40mm E-JUST:

- FlowCon AB (DN25/32)
- FlowCon ABV2 (DN25/32/40)
- FlowCon ABM2 (DN25/32/40)

### 50mm E-JUST:

- FlowCon AB (DN40/50)

Accuracy: Greatest of either  $\pm 10\%$  of controlled flow rate or 20 l hr (0.0056 l/sec or 0.088 GPM).

The composite automatic flow rate cartridges ensure that the design flow will not be exceeded regardless of pressure fluctuations in the system.

#### Adjustment

By means of a Hex key each cartridge can be easily adjusted to one of eight different flow rates. Adjustment is managed 'internally' and therefore the valve must be isolated and the cartridge removed from the valve body, before adjusting is possible.

The groove at the bottom of the cartridge indicates the selected flow rate setting, numbered 1 through 8 (please see below and previous page). The color of

the cartridge shows the selected flow range and the letter stamped on the cap of the cartridge indicates the control range, e.g. Y-GREEN = 20-130 kPaD and flow rates from 0.0978-0.273 l/sec.

**Applications and Principle of Cartridge Operation** are similar to the ones for E-JUST cartridge.

# Stainless Steel Cartridges

Pre-Set Flow Rate Cartridges for FlowCon Valves

The stainless steel flow rate cartridges ensure that the design flow will not be exceeded regardless of pressure fluctuations in the system. Since the cartridge is factory pre-set, the flow rate cannot be adjusted on the cartridge. The advantage of this type of cartridge is that it works at lower pressure differentials and with higher flows.

## Principle of Operation

Below the stainless steel cartridge's pressure differential range it acts as a fixed orifice.

Within operating pressure differential range, the effective open orifice area of the cartridge is automatically adjusted to the point where the specified flow rate will be delivered (as the pressure differential increases, the open area closes and as it decreases, the area opens).

When the pressure differential range is exceeded, the valve again becomes a fixed orifice device. This ensures that no part of the system is starved or shut down.

# FlowCon E-JUST 20mm-50mm

*External Adjustable Composite Cartridge*

## SPECIFICATIONS

Static pressure:	2500 kPa / 360 psi
Temperature rating, media:	-20°C to +120°C / -4°F to +248°F
Materials:	
- Cartridge:	PSU (Polysulfone)
- Diaphragm:	<ul style="list-style-type: none"><li>- Hydrogenated acrylonitrile-butadiene-rubber on G-red, G-green, G-black, 40mm Y-green and 50mm G-black</li><li>- EPDM on Y-red, Y-green and Y-black</li></ul>
- Spring:	18-8 stainless steel
- Stem seals:	EPDM
- Head nut:	Forged brass ASTM CuZn40Pb2
Flow rate range:	0.0278-4.48 l/sec

## FLOW RATES ( $\pm 5\%$ of controlled flow or $\pm 2\%$ of maximum flow)

E-JUST model	Control range		Minimum setting			Maximum setting		
	kPaD	psid	l/sec	l/hr	GPM	l/sec	l/hr	GPM

	17-210	2.5-30	0.0278	100	0.44	0.169	609	2.68
	30-400	4.4-58	0.113	406	1.79	0.352	1270	5.57
	35-400	5.1-58	0.0383	138	0.607	0.249	896	3.95
40mm	17-400	2.5-58	0.149	535	2.36	1.62	5830	25.7
50mm	20-400	2.9-58	0.883	3180	14.0	4.48	16100	70.9

## MODEL NUMBER SELECTION

E-JUST \_\_\_\_\_ . \_\_\_\_\_ . \_\_\_\_\_

Insert cartridge size:

1=20mm (fits in 15-25mm valve bodies)  
2=40mm (fits in 25-40mm valve bodies)  
3=50mm (fits in 40-50mm valve bodies)

Insert dP control range:

Y=White pawl:

17-200 kPaD for 20mm red cartridge  
17-210 kPaD for 20mm black or green cartridge  
17-400 kPaD for 40mm cartridge

G=Grey pawl:

20-400 kPaD for 50mm cartridge  
30-400 kPaD for 20mm red cartridge  
35-400 kPaD for 20mm black or green cartridge

Insert color code:

R=red B=black (B=standard code for 50mm) G=green (G=standard code for 40mm)

Example: E-JUST1.Y.B=20mm black E-JUST cartridge for 15-25mm valve body, 17-210 kPaD.

	4.35	15700	68.9	4.7
	4.39	15800	69.6	4.8
	4.44	16000	70.3	4.9
	4.48	16100	70.9	5.0

Accuracy: Greatest of either  $\pm 5\%$  of controlled flow rate or  $\pm 2\%$  of maximum flow rate

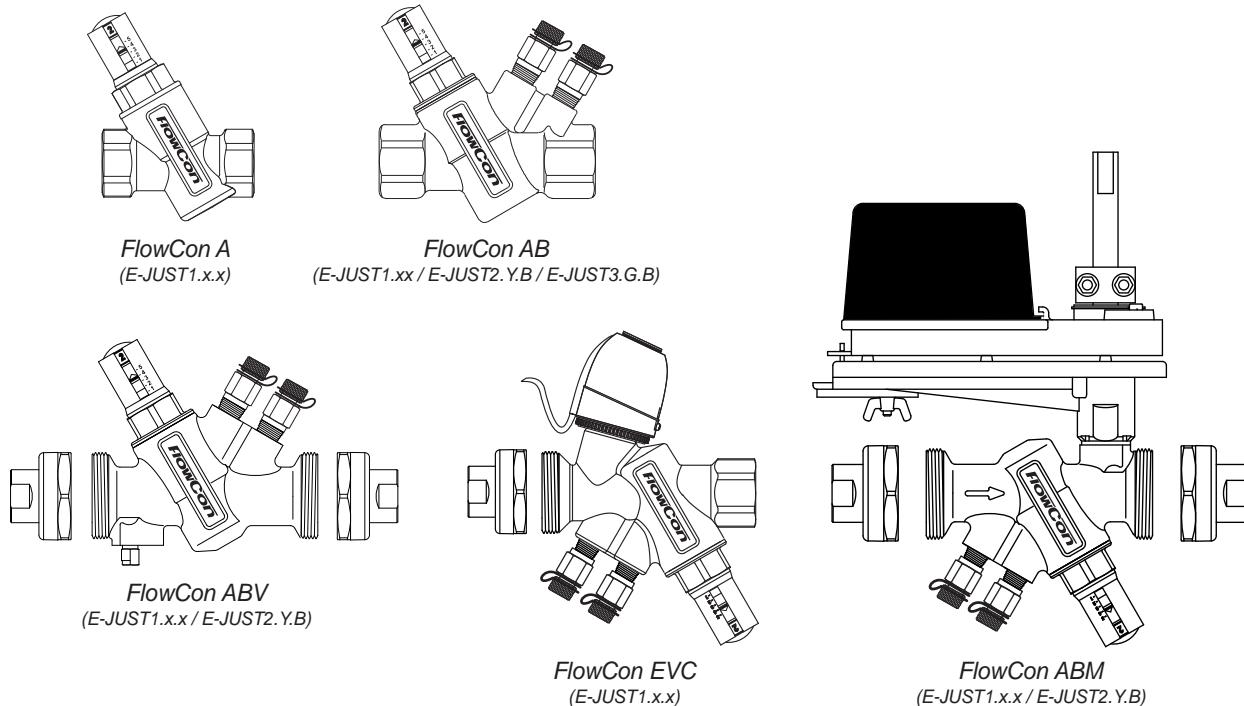

Use the FlowCon adjustment key (part number ACC0001) for adjusting the flow rate.

A setting of 4.2 corresponds to a flow rate of 4.10 l/sec for the 50mm cartridge, range 20-400 kPaD.

## GENERAL DESCRIPTION

The FlowCon E-JUST cartridge is tamper-proof since the adjustment unit is being operated by means of a special FlowCon key and the setting can be sealed by means of a colored top cover. The color of the cover indicates the color of the cartridge, i.e. the flow range. The color of the pawl on the handle shows the control range. The FlowCon E-JUST can be used with the following FlowCon valves:

## GENERAL SPECIFICATIONS

### 1. AUTOMATIC BALANCING VALVES WITH EXTERNAL ADJUSTABLE CARTRIDGE

- 1.1. Contractor shall install automatic balancing valves where indicated in drawings.
- 1.2. Valve shall consist of dynamic, adjustable flow limiting device.
- 1.3. Housing shall be configured for flow regulation unit accessibility.

### 2. FLOW REGULATOR / AUTOMATIC BALANCING UNIT

- 2.1. Flow regulation unit assembly shall be manufactured of polysulfone with a hydrogenated acrylonitrile-butadiene rubber or EPDM diaphragm and stainless steel 18-8 spring.
- 2.2. Flow regulation unit shall be readily accessible for change-out or maintenance.
- 2.3. Flow regulation unit shall be adjustable with the valve in-line and the system in operation.
- 2.4. Flow regulation unit shall be externally adjustable to 1 of 41 different flow rates; shall be available in 4 different kPaD operational ranges for DN15/20/25, 1 kPaD operational range for DN25/32/40 and 1 kPaD operational range for DN40/50; minimum range shall be capable of being activated by minimum 17 kPaD. Further, the flow regulation unit shall be capable of controlling flow within  $\pm 5\%$  of rated flow or  $\pm 2\%$  of maximum flow.
- 2.5. Identification tags shall be available for all cartridges; tags shall be indelibly marked with differential pressure range, flow rate, color and dial setting.

# FlowCon DPCV

*Differential Pressure Control Valves*

# FlowCon DPCV

## Differential Pressure Control Valves

The FlowCon DPCV is designed for controlling differential pressure in water based heating and air-conditioning systems, ensuring constant pressure drop over two specific points of the water system regardless of pressure and flow fluctuations.

The FlowCon DPCV will allow the user to set the valve to a pre-defined differential pressure value. To make the installation as easy as possible the setting is done by hand without any usage of tools. To make installation even easier, no special measuring equipment or conversion tables are required during adjustment, since the settings are printed directly on the handle. Once the installation process is completed, the valve allows a tamper-proof function, when the supplied lock ring is fastened with a cable binder. Further, the FlowCon DPCV can be used as a shut-off valve for maintenance purpose.

In heating systems the FlowCon DPCV is primarily intended to be used on the risers or branches with the aim of maintaining a constant differential pressure between the supply and return side. Consequently, for the sub system controlled by the FlowCon DPCV, water velocity through the radiator valves is reduced and potential noise at part loads is minimized.

In cooling systems the FlowCon DPCV is installed in order to absorb any pressure fluctuations introduced by system load changes and potentially VFD pumps, if installed. The absorption of pressure will lead to reduced flow fluctuations and thereby improved balancing and improved energy consumption of the building.

### Features and Benefits

- **Rugged, robust design in bronze/brass.**
- **All functions located on one side** for easier access and use.
- **High flow rates.**
- **Wide pre-setting range** with stepless  $\Delta P$ -scale and without any need of tools.
- **Lockable pre-setting.**
- **Capillary tube** with  $\frac{1}{4}$ " male ISO thread connection, fitting many valve types (including all FlowCon AB/ABV/ABM housings).
- **Available with up to 3 pressure/temperature plugs** for maximum measurement options - possibility of measuring the pressure at:
  - the capillary tube
  - the inlet of the DPCV
  - the outlet of the DPCV.
- Can be used as a **shut-off valve** during maintenance.

#### Principle of Operation

The FlowCon DPCV controls the differential pressure between the capillary tube and the inlet of the DPCV. The FlowCon DPCV regulates the differential pressure by means of a diaphragm element counteracted by a spring. The diaphragm element is connected to a cone, which movements change the size of the orifice until the controlled differential pressure is reached. When pre-setting the differential pressure, the spring is tightened or loosened so that the balance will be found at a higher or lower differential pressure than before. When the valve is used as a shut-off valve, the cone closes off the orifice.

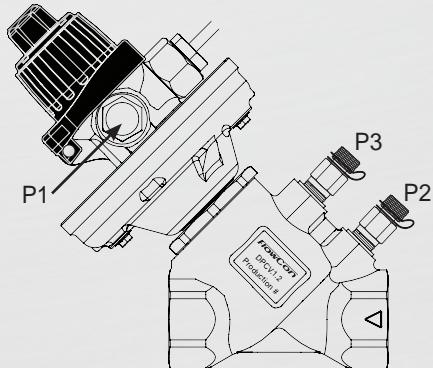

#### Differential Pressure Setting

For adjusting the differential pressure range of the FlowCon DPCV simply lift the lock-ring and turn the handle to the required setting without using additional tools. Settings can be read directly on the scale on the handle. As an example, a setting 10 corresponds to a  $\Delta P$  of 10 kPaD (1.5 psid) equal for all FlowCon DPCV valve sizes (DN15-50). But each valve provides a wide stepless setting range between 5 and 35 kPaD (0.7-5.1 psid).

After setting  $\Delta P$  the lock-ring is re-fitted and can optionally be locked with a cable binder securing the valve to be tamper-proof.

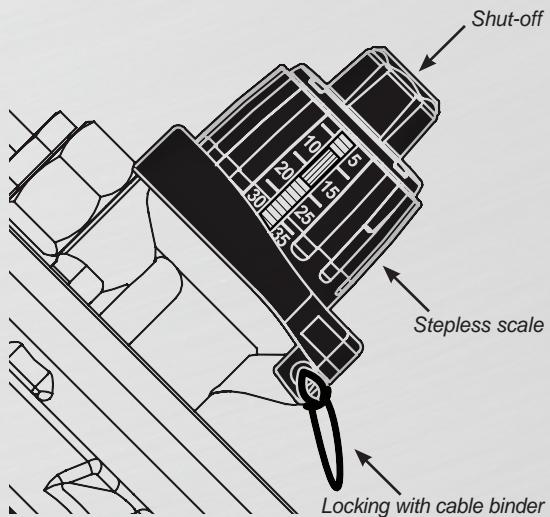

#### Shut-off Function

The built-in shut-off function is activated by turning with an Allen key counter-clockwise at top of the FlowCon DPCV handle until the end point. Opening the FlowCon DPCV again is done with a clockwise movement with the Allen key until end point. The  $\Delta P$  setting is kept as per memory stop.

#### Pressure Verification

Optional pressure/temperature test plugs are available for verifying the differential pressure. They are fitted into 1/4" ISO female threaded ports. With the pressure/temperature plugs fitted, a pressure differential reading across the FlowCon DPCV can be taken ( $P_2 - P_3$ ). Using a combination of other pressure-/temperature plugs the controlled pressure differential across the riser or branch can be read ( $P_1 - P_2$ ).

## Technical Data

## SPECIFICATIONS

Static pressure:	1600 kPa / 232 psi
Temperature rating, media:	-20°C to +130°C / -4°F to +266°F
Material:	
- Body:	Bronze CuSn5Zn5Pb2 / CuSn5Zn5Pb5-C and Brass CuZn39Pb3
- Internal parts:	Brass CuZn39Pb3 / Stainless steel
- O-rings:	EPDM
- Seat:	EPDM
- Diaphragm:	EPDM
- Capillary tube:	Cu
- Spring:	Stainless steel
- Plastic parts:	PA
- Fasteners:	Stainless steel / Carbon steel nickel plated
Maximum operational ΔP:	210 kPaD / 30 psid
Differential pressure range:	5 kPaD to 35 kPaD / 0.7 psid to 5.1 psid
End connections:	Fixed female ISO (ISO7, DIN2999)
Capillary tube:	Ø4mm, length: 0.8m, end connection: 1/4" ISO thread

## DIMENSIONS AND WEIGHTS (NOMINAL) (measured in mm unless noted)

Model no.	Valve size	L1	L2	H1	H2	W	Weight (kgs.)	Kvs
DPCV.1.1.X.I	15mm	75	140	28	112	87	1.5	3.6
DPCV.1.2.X.I	20mm	80	140	28	112	87	1.6	5.8
DPCV.1.3.X.I	25mm	90	143	28	115	87	1.8	7.1
DPCV.1.4.X.I	32mm	110	188	35	153	117	3.6	15.4
DPCV.1.5.X.I	40mm	120	194	36	158	117	4.0	22.0
DPCV.1.6.X.I	50mm	150	206	45	161	117	4.9	35.8

## MODEL NUMBER SELECTION

DPCV .   1   .    .    . I

Insert controlled differential pressure range:  
1=5-35 kPaD / 0.7-5.1 psid (standard)

Insert body type:  
1=15mm (1/2")   2=20mm (3/4")   3=25mm (1")   4=32mm (1 1/4")   5=40mm (1 1/2")   6=50mm (2")

Insert p/t plug requirements:  
B=2 pressure/temperature plugs  
C=3 pressure/temperature plugs<sup>1</sup>  
P=taps plugged (standard)

Insert connections standard:  
I=ISO (standard)

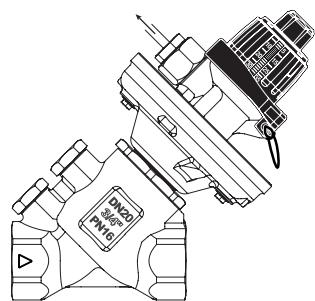

Example: DPCV.1.2.C.I=DPCV DN20 with 3 pressure/temperature plugs 20mm ISO female end connections, 5-35kPaD.

Note 1: the extra p/t plug can be used to measure the pressure in the capillary tube.

## GENERAL DESCRIPTION

The FlowCon DPCV series are differential pressure control valves. Each valve has an adjustable differential pressure setting to enable differential pressure limitation for balancing or avoiding noise from the sub system that the valve is controlling. Furthermore, the DPCV can be used as a shut-off valve.

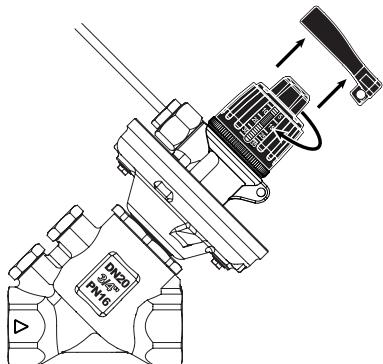

The FlowCon DPCV is easy to adjust without special equipment or conversion tables since the setting is printed directly on the valve which is adjusted by hand. The valve is tamper-proof when the supplied lock ring is fastened with a cable binder.

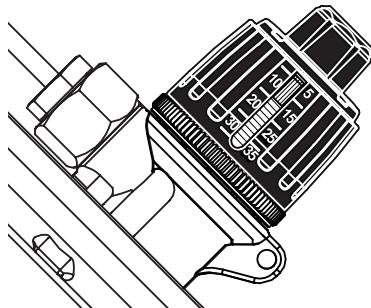

## DIFFERENTIAL PRESSURE LIMITATION SETTINGS

General settings of $\Delta P$ controlled			Recommended operational $\Delta P$			
Setting	kPaD	psid	min.		max.	
			kPaD	psid	kPaD	psid
5	5	0.7	25	3.6	30	4.4
10	10	1.5	30	4.4	60	8.7
15	15	2.2	35	5.1	90	13
20	20	2.9	40	5.8	120	17
25	25	3.6	45	6.5	150	22
30	30	4.4	50	7.3	180	26
35	35	5.1	55	8.0	210	30

Accuracy: Greatest of either  $\pm 25\%$  of controlled differential pressure or  $\pm 10\%$  of maximum differential pressure.

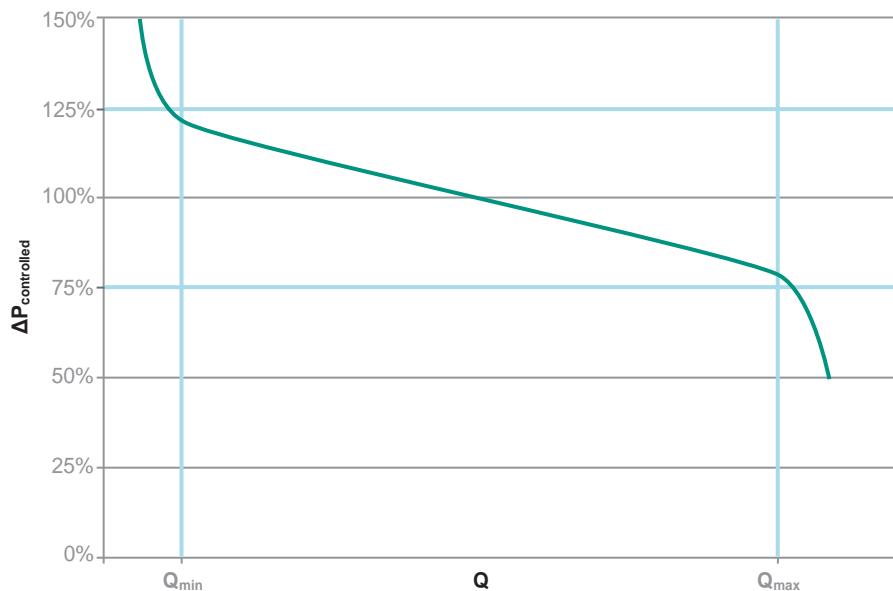

Turn the top wheel by hand until the setting is reached.

The picture shows a setting of 5 kPa (factory setting).

For a more precise setting or to reach a setting in between the settings in the table, please measure the controlled differential pressure while adjusting the setting.

## MAXIMUM FLOW RATE LIMITATION SETTINGS

		Flow range (l/h)						
Setting:		5	10	15	20	25	30	35
DN15	Qmin	50	60	70	80	90	105	120
	Qmax	1600	1600	1600	1600	1600	1650	1700
DN20	Qmin	70	80	90	105	120	135	150
	Qmax	2100	2150	2400	2450	2500	2550	2600
DN25	Qmin	110	120	130	145	160	185	200
	Qmax	2250	2400	2600	2850	2900	2950	3000

	Qmax	6000	6600	7200	7900	8200	8600	9000
DN50	Qmin	500	500	500	500	500	500	500
	Qmax	6300	8000	10000	12000	12300	12600	13000

## ACCESSORIES

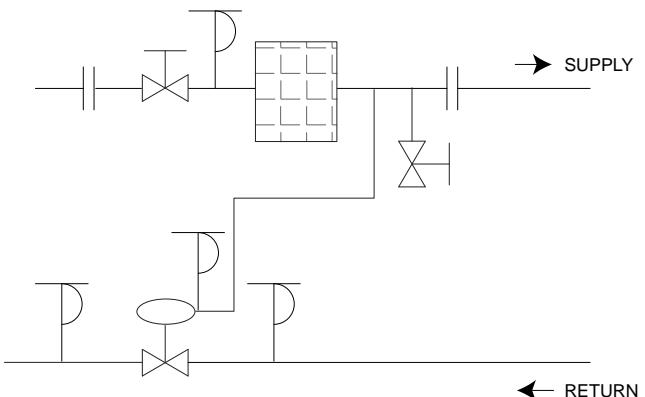

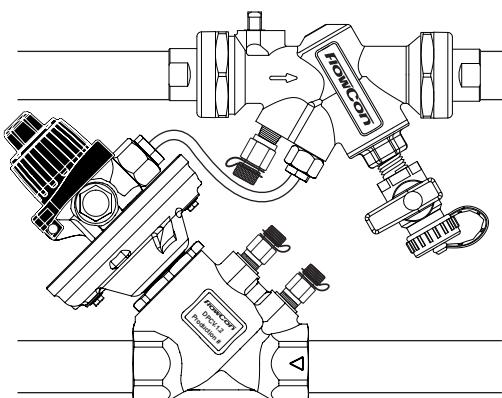

- Capillary tube with fittings, spare part: ACC00120.

## GENERAL SPECIFICATIONS

### 1. DIFFERENTIAL PRESSURE CONTROL VALVES

- 1.1. Contractor shall install the differential pressure control valves where indicated in drawings.
- 1.2. Valve shall be a differential pressure control device. Differential pressure control valve shall accurately control differential pressure over a sub system independent of system fluctuation.
- 1.3. Differential pressure shall be available in 1 range for DN15 to DN50. The differential pressure setting shall be continuously adjustable within the range 5-35 kPaD. Valve shall be externally adjustable while in-line and the system in operation.
- 1.4. The differential pressure control valve shall be capable of controlling the differential pressure within  $\pm 25\%$  of controlled differential pressure or  $\pm 10\%$  of the maximum setting.
- 1.5. Valve shall be able to function as a shut-off valve meanwhile it will not functioning as a differential pressure control valve.
- 1.6. Valve housing shall consist of bronze CuSn5Zn5Pb2 / CuSn5Zn5Pb5-C, rated at no less than 1600 kPa static pressure and +130°C.
- 1.7. Valve housing shall be permanently marked to show direction of flow.
- 1.8. Differential pressure regulation parts shall consist of brass, copper and stainless steel with EPDM diaphragm and sealing parts.
- 1.9. Optional pressure/temperature test plugs for verifying accuracy of differential pressure performance shall be available for all valve sizes.

# FlowCon T-JUST

*Thermostatic Valve for Domestic Water*

# FlowCon T-JUST

*Thermostatic Insert for Thermostatic Valves in Domestic Water*

The FlowCon T-JUST is a thermostatic element insert which fits in a standard FlowCon valve body of your choice and is used as a thermostatic control valve designed to control the thermal balance in domestic hot water circulation installations.

The valve automatically controls the temperature of the water which circulates through the system and therefore a thermal balance is achieved throughout the entire system. Further, the proper temperature is immediate available at all draw-off taps to ensure optimal comfort.

The T-JUST insert can be adjusted to the required temperature within a scale of +35°C to +65°C. Also, it is equipped with a manual or actuated by-pass. The purpose of the by-pass is to increase the temperature of the water to maximum temperature for a certain period of time to avoid bacterial problems such as Legionella.

Legionnaire's disease is an infection which in 90% of the cases is caused by Legionella Pheumphila. Since the infection is transmitted when inhaling aerosolized, contaminated water into the lungs, the presence of bacteria in water systems creates a risk wherever there are aerosol-producing devices. The perfect conditions for transmission of infection exist in water tanks and water installations in dwelling buildings, commercial buildings and public buildings such as hotels, hospitals etc.

The normal recommended physical method of bacteria pasteurization is thermal disinfection, where the water is heated up to "disinfection temperature"

and maintained for a specific "disinfection time". FlowCon T-JUST is designed and ready to perform a regular thermal disinfection at a temperature of up to +70°C to lower the risk of Legionella.

## Features and Benefits

- **Thermal balancing**, the correct water temperature at each draw-off tap.
- **The thermostatic element and moving parts are located out of water contact**, this will prevent problems with scaling.
- **Field adjustable**, temperature setting can be changed on demand, from +35°C to +65°C.
- **By-passing possibility while the system is working**, either manual or automatic with ON/OFF actuator, normally closed.
- **Accuracy** of ±2°C.
- Each T-JUST is **calibrated separately**.
- Due to design the valve is **not susceptible to blockage**.
- **Product approval**, all valve bodies are available in DZR-brass and T-JUST is approved to meet the requirements in the Danish Building Regulations.
- **Pressure/temperature measurement plugs** available for verifying operating temperature.
- **Double union end connections** for ease of installation and wide selection of end fittings (ABV) or **fixed female threaded ends** (A/AB).

#### Applications

The T-JUST insert can be used with the following FlowCon valves:

- *FlowCon A (DN15/20/25)*
- *FlowCon AB (DN15/20/25)*
- *FlowCon ABV1 (DN15/20/25)*
- *FlowCon FF-unit (DN20)*

The FF-unit is designed to meet market requirements and directly replace other brands of thermostatic valves.

#### Principle of Operation

The T-JUST insert controls the temperature of the water which circulates through the system. The valve is in balance, when the water temperature has reached the temperature set on the T-JUST insert. If T-JUST is set to a temperature, of for instance +55°C, and the temperature of the circulating water is above +55°C, the thermostatic element expands and the internal cone moves towards the valve seat and the valve closes. If the temperature is below +55°C, the thermostatic element will contract and the valve will open, allowing more water to flow through.

#### Temperature Selection and Setting

To set the temperature simply remove the black cover and set the scale by means of a special FlowCon adjustment key to the desired temperature between +35°C and +65°C. Screw on the top cover tightly to allow the thermostatic control to be working and to avoid unwanted tampering.

Please note that when changing the temperature the according adjustment may take some time to get the system in complete balance again. The T-JUST is factory pre-set to +60°C. Further a minimum  $\Delta T$  of 5°C between the hot-water tank and the temperature set on the T-JUST at the critical tapping point is recommended to allow the expected heat loss in the circulation pipe.

#### By-Pass Operation

Manual by-pass operation is carried out simply by removing the black cover and placing the red plastic ring on top of the T-JUST. Placing the black cover above the red by-pass ring and screwing it on tightly will put the thermostatic function out of action and allow maximum water temperature to flow through as long as the top cover is tightened with the red by-pass ring as distance piece.

Alternatively the pasteurization of the water can be carried out automatically by means of a small standard ON/OFF actuator controlled by either the BMS-system or a local timer. Using the BMS-system, duration and maximum temperature of the disinfection process can be programmed to meet customer demands.

The by-pass cannot be regulated since the by-pass function is only necessary during flushing and the thermostatic control during this period of time will be non-existing. Maximum opening means minimum resistance which again means lesser time for flushing.

## Technical Data

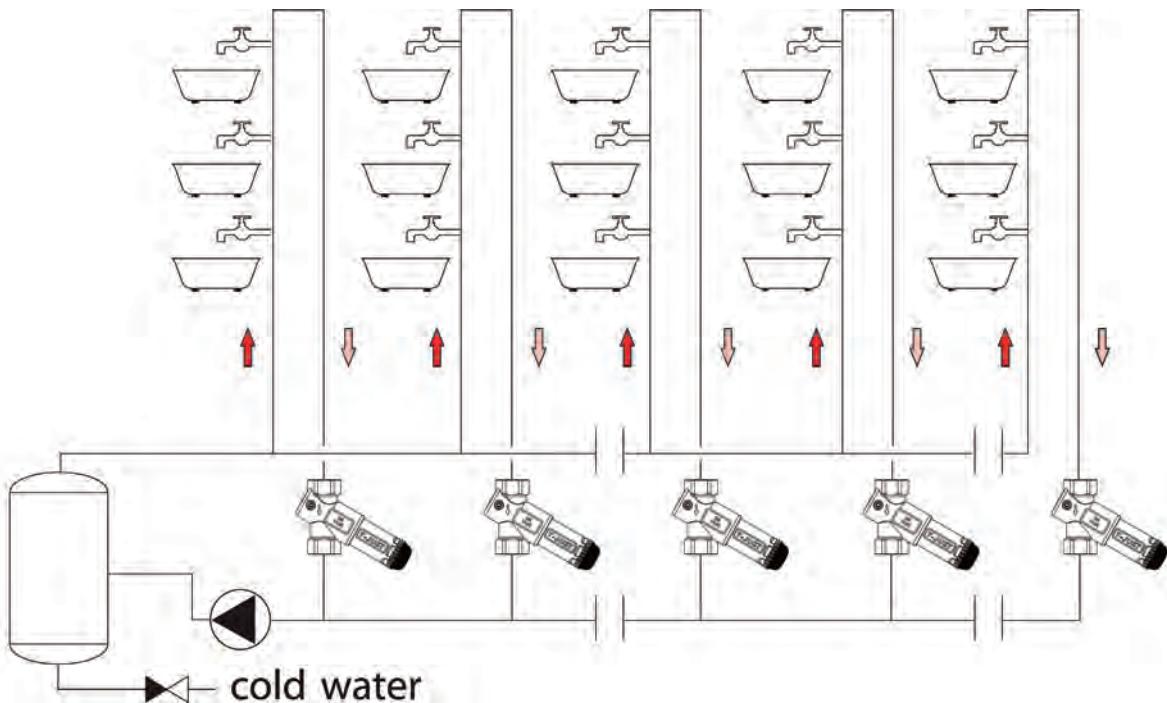

For further information and part number selection please see individual FlowCon tech note.

*Thermostatic Valve for Domestic Water*

## SPECIFICATIONS

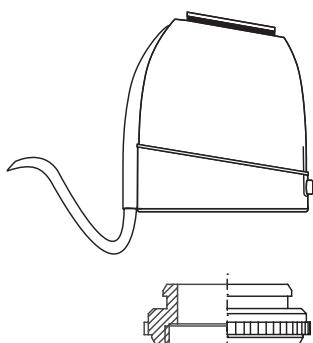

### Insert:

Pressure rating:	1000 kPa / 145 psi
Temperature rating, media:	0°C to +85°C / +32°F to +185°F
Temperature rating, ambient:	0°C to +60°C / +32°F to +140°F
Material:	
- Cartridge:	PPS, Polyphenylene sulfide
- Element:	Wax
- Body:	Forged brass ASTM CuZn40Pb2
- Spring:	Stainless steel AISI 302
- Internal components:	PPS, Polyphenylene sulfide
- O-rings:	EPDM
Max. Kv-value:	1.10 m <sup>3</sup> /h
Max. differential pressure:	100 kPaD / 14.5 psid
Temperature range:	+35°C to +65°C / +95°F to +149°F

### Valve:

Material:	Forged brass ASTM CuZn40Pb2 or DZR brass CW602N CuZn36Pb2AS
- Body:	ABV: Chemically nickel plated brass ball
- Ball valve:	A: Fixed female ISO
End connections:	AB: Fixed female ISO
	ABV: Union end conn. in brass alloy ISO
	FF-unit: Female ISO inlet; male ISO outlet

## SPECIFICATIONS (continued)

Type *EV.0.3.R, EV.0.4.R*  
Valve adaptor, red

### Electrical:

**TYPE EV.0.3.R<sup>1</sup>, EV.0.4.R<sup>1</sup>**

Voltage:

EV.0.3.R – 230V AC

EV.0.4.R – 24V AC

ON/OFF, normally closed<sup>2</sup>

1.8 Watt

30 – 60 sec

Approx. 3 min

Ambient temperature:

0°C to +60°C

Protection:

IP54, class II

Cable:

1 meter fixed cable

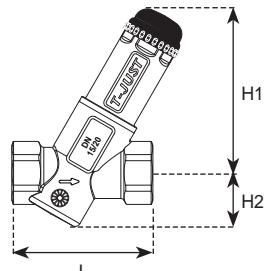

Note 1: FlowCon warranty is voided using other actuators than supplied or recommended by FlowCon International A/S.

Note 2: To ensure that the valve is in an open position during commission of the system, the actuator will be delivered in a normal open position and remain in this position until it is electrically operated first time.

## DIMENSIONS AND WEIGHTS (NOMINAL) (measured in mm unless noted)

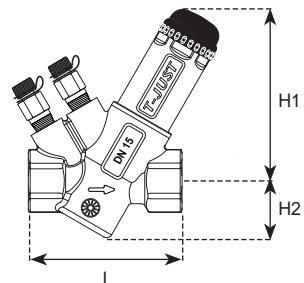

### FlowCon T-JUST with FlowCon A-body

Valve size	Insert size	L	H1	H2	H3 (with actuator - not shown)	Weight (kgs.)
15	20	80	97	31	130	0.61
20						0.56

### FlowCon T-JUST with FlowCon AB-body

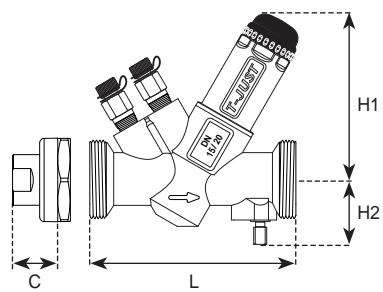

Valve size	Insert size	L	H1	H2	H3 (with actuator - not shown)	Weight (kgs.)
15	20	82	97	31	130	0.60
20						0.64

### FlowCon T-JUST with FlowCon ABV1-body

Valve size	Insert size	L	H1	H2	End connections C <sup>2</sup>			Weight (kgs.) (w/o end conn.)	
					ISO female	ISO male	US Sweat

Note 3: To be fitted as upgrading element.

## MODEL NUMBER SELECTION

Insert body size:  
1=A-body 15mm  
2=A-body 20mm  
3=A-body 25mm  
4=AB-body 15mm  
5=AB-body 20mm  
6=AB-body 25mm  
7=ABV1-body 15/20/25mm  
9=FF-unit 20mm

Insert p/t plug requirements (on AB and ABV-bodies):  
P=taps plugged B=pressure/temperature plugs O=taps open

Insert union end connections (if ABV-body):

Body size	Female threaded	Male treated	Sweat
Union end 15-25mm with T-JUST insert	E=15mm=1/2" F=20mm=3/4"	H=15mm=1/2" I=20mm=3/4" J=25mm=1"	K=15mm L=18mm M=22mm

Insert connection standard:  
I=ISO \_\_\_\_\_

Insert valve body material:  
B=standard brass D=DZR brass R=Stainless steel (only A 20mm ISO)

Example: T-JUST4.P.I.B=AB 15mm ISO female threaded standard brass body with plugs and T-JUST insert.

## APPLICATIONS

The FlowCon T-JUST, to be used in either FlowCon A, AB, ABV1 bodies or the FF-unit, is designed for domestic hot water installations with circulation. The FlowCon T-JUST automatically controls the temperature of the water that circulates through the valve and therefore the thermal balance is ensured throughout the domestic hot water system.

The T-JUST will from factory be pre-set to +60°C. Temperature setting is easy – simply remove the black top cover and set the temperature by means of a FlowCon adjustment key. If for instance a water temperature of +55°C is needed, the T-JUST is set to the temperature of +55°C. If the temperature of the circulating water is below +55°C, T-JUST opens and more water will pass through. If the temperature is higher than +55°C, T-JUST closes. The black top cap must be screwed tightly on the T-JUST to activate the thermostatic control (and to avoid tampering).

The by-pass function can be carried out either manually by installing the red by-pass ring (used as indicator) or by means of an on/off actuator. The by-pass will force the T-JUST to fully open and set the temperature control out of action. This function is used to avoid bacterial problems such as Legionella and therefore it is recommended to flush the system regularly, flushing one branch at a time for a recommended period of time. For manual by-pass, adapt the red by-pass ring on the T-JUST and screw the black cap tight for the flushing period. When using automatic by-pass, the actuator can be either timer controlled or controlled by the BMS-system.

For the valve to work efficiently, a certain heat loss must be present, and since the pipes are normally insulated, insulation of the valve is not necessary. Without insulation of the valve, the valve will operate under optimal working conditions and temperature regulation will be more accurate. If insulation is required the valve will still function, but regulation will be less precise.

## ACCESSORIES

- Blind cap: ACC0080 (cap without a cartridge for flushing out the system)
  - Adjustment key: ACC0001
  - Manuel by-pass ring: ACC0002 (ring for manual by-pass; 10 pcs. per package)
  - Replacement cap, black: ACC0003.

## GENERAL SPECIFICATIONS

### 1. THERMOSTATIC VALVES FOR DOMESTIC WATER - FLOWCON T-JUST

- 1.1. Contractor shall install thermostatic valves where indicated in drawings.
- 1.2. Temperature regulation unit shall be available as a plug-in device for an in-line valve housing and the adjustable element shall be out of contact with the circulating water.

### 2. VALVE ACTUATOR

- 2.1. Actuator shall provide a visual indication of the valve position.
- 2.2. The valve shall be closing when the actuator is not powered.
- 2.3. The valve shall withstand a shut off pressure of at least 400 kPa without allowing internal leakage.
- 2.4. The seat plug shall be manufactured of EPDM rubber.
- 2.5. The packing box for sealing the stem shall be removable with the system in operation, without allowing external leakage.

### 3. VALVE HOUSING

#### 3.a. FlowCon A

- 3.a.1. Valve housing shall consist of forged brass ASTM CuZn40Pb2, rated at no less than 2500 kPa static pressure and +120°C.
- 3.a.2. Valve housing shall be permanently marked to show direction of flow.
- 3.a.3. Housing shall be configured for temperature regulation unit accessibility.

OR....

#### 3.b. FlowCon AB

- 3.b.1. Valve housing shall consist of forged brass ASTM CuZn40Pb2, rated at no less than 2500 kPa static pressure and +120°C.
- 3.b.2. Valve housing shall be permanently marked to show direction of flow.
- 3.b.3. Optional pressure/temperature test plugs for verifying accuracy of flow performance shall be available for all valve sizes.
- 3.b.4. Housing shall be configured for temperature regulation unit accessibility.

OR....

#### 3.c. FlowCon ABV

- 3.c.1. Valve housing shall consist of forged brass ASTM CuZn40Pb2, rated at no less than 2500 kPa static pressure and +120°C.
- 3.c.2. Valve housing shall be permanently marked to show direction of flow.
- 3.c.3. Valve ball shall consist of chemically nickel plated brass (ASTM CuZn40Pb2).
- 3.c.4. Optional pressure/temperature test plugs for verifying accuracy of flow performance shall be available for all valve sizes.
- 3.c.5. Valve housing shall be double union end constructed with a range of pipe connections available for the appropriate pipe size.
- 3.c.6. Housing shall be configured for temperature regulation unit accessibility.

OR...

#### 3.d. FLOWCON FF-UNIT

- 3.d.1. Valve housing shall consist of DZR brass CW602N CuZn36Pb2AS, rated at no less than 2500 kPa static pressure and +120°C.
- 3.d.2. Valve housing shall be permanently marked to show direction of flow.
- 3.d.3. Housing shall be configured for temperature regulation unit accessibility.

### 4. TEMPERATURE REGULATION ASSEMBLY / THERMOSTATIC ELEMENT / T-JUST

- 4.1. Temperature regulation unit shall be manufactured of forged brass ASTM CuZn40Pb2 body, rated at not less than 1000 kPa static pressure and +85°C. Further, the temperature regulation unit shall be manufactured of polyphenylene sulfide cartridge with stainless steel 18-8 spring and wax element.
- 4.2. Temperature regulation unit shall be readily accessible for change-out or maintenance.
- 4.3. Temperature regulation unit shall be stepless adjustable to a temperature between +35°C and +65°C; and shall be capable of controlling the temperature within ±2°C of the rated temperature.
- 4.4. Temperature regulation unit shall be ready for either manual by-pass or actuated by-pass without exchanging the unit.

## MODEL NUMBER SELECTION

Insert by-pass size, fixed end:

0=20mm male (ISO) suitable for DN15 EuroCone, no union end connections

2=20mm male (ISO) suitable for DN15 EuroCone, two union end connections

4=four union end connections

Insert connection standard:  
I=ISO (standard)

Insert handle type:

O=normal handles, no extensions (standard)

E=handles with 4" handle extensions<sup>5</sup>

Insert side-option:

O=blind (standard)

R=1/4" ISO female threaded in right-hand side

L=1/4" ISO female threaded in left-hand side

B=1/4" ISO female threaded in both sides

Insert requirement to unit

O=not assembled

1=assembled

2=assembled and pressure tested

Example: F3895.2.CG.00.I.0.0.1 = FlowCon Mini By-Pass unit, two 20mm ISO male fixed ends suitable for DN15 EuroCone and two 15mm ISO male union ends, no handle extensions, no side-option, assembled.

Note 3: Other end connections and sizes available upon request.

Note 4: Extra width compared to standard option.

Note 5: When handle extensions are used, valves with actuators cannot be fitted in-line with handles, but must be tilted.

## FUNCTIONS

Battery:	9V 6LR61
Connection to PC requires optional software (see the accessories):	USB Mini
<hr/>	
Flow characteristics for:	
FlowCon Composite Cartridge series (20-40mm)	
FlowCon E-JUST Cartridge series (20-50mm)	
FlowCon Stainless Steel Cartridge series (20-80mm)	
FlowCon SH series (15-150mm)	
FlowCon Green Insert series (20-40mm)	<b>Note:</b> Measurement only to be done either without actuator or with actuator fully open
FlowCon SME Cartridge series (20-40mm)	
FlowCon SM series (15-150mm)	<b>Note:</b> Measurement only to be done either without actuator or with actuator fully open
Measurement range:	0.5-600 kPaD
Measurement accuracy:	± 0.2 kPaD within 0.5-20 kPaD range ± 1.0% of reading within 20-600 kPaD range
Hysteresis:	± 1.0% of reading within 20-600 kPaD range
Storage:	Default 100 locations. Up to 2000 locations with optional software (see the accessories options)
DP units:	Pa, kPa, bar, m H <sub>2</sub> O, mm H <sub>2</sub> O, cm H <sub>2</sub> O, psi, feet H <sub>2</sub> O, inches H <sub>2</sub> O
Flow units:	l/s, l/min, l/h, (imperial) gpm, (US) gpm.

## ACCESSORIES

- Set of 1m tubes with snap connectors: ACC6000
- Set of 3.3mm p/t needle for snap connectors, straight, incl. protection pipe (to be removed before use): ACC6001
- Set of 3.3mm p/t needle for snap connectors, angle, incl. protection pipe (to be removed before use): ACC6002
- Set of 3.3mm p/t needle for snap connectors, extra long and straight, incl. protection pipe (to be removed before use): ACC6003
- Set of 3.3mm p/t needle for snap connectors, extra long and angle, incl. protection pipe (to be removed before use): ACC6004
- Software for calculations of flow in wafers and/or administration of larger projects: ACC6010.

## GENERAL DESCRIPTION

The FlowCon FAC6HP is an electronic manometer programmed to carry out differential pressure measurements on FlowCon's dynamic balancing valves and other balancing valves.

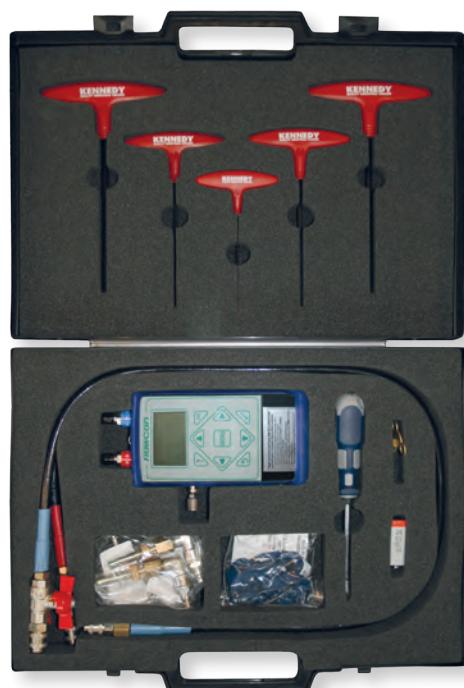

The state-of-the-art software and complete database of FlowCon's dynamic balancing valves allows direct reading of differential pressure and flow. The nine button design allows simple navigation of the menu system with all parameters visible on screen.

## CARRY CASE

The commissioning meter is supplied in a carry case with foam inlay for protection of the items inside.

The carry case contains:

- FAC6HP commissioning meter including fittings for snap connectors and protection caps for fittings
- Set of 1m tubes with snap connectors (ACC6000)
- Set of 3.3mm p/t needles for snap connectors, angle, incl. protection pipe (to be removed before use) (ACC6002)
- Set of 3.3mm p/t needles for snap connectors, straight, incl. protection pipe (to be removed before use) (ACC6001)
- Extra 9V 6LR61 battery
- FlowCon adjustment key
- 6-in-1 screw driver (for PH 1-2-3 and PZ 1-2-3)
- Hexagon (allen) keys (sizes 3.0, 4.0, 5.0, 6.0 and 8.0mm)
- Mechseal key
- Extra protection caps for commissioning meter fittings
- Key hanger for hanging commissioning meter from pipes etc.

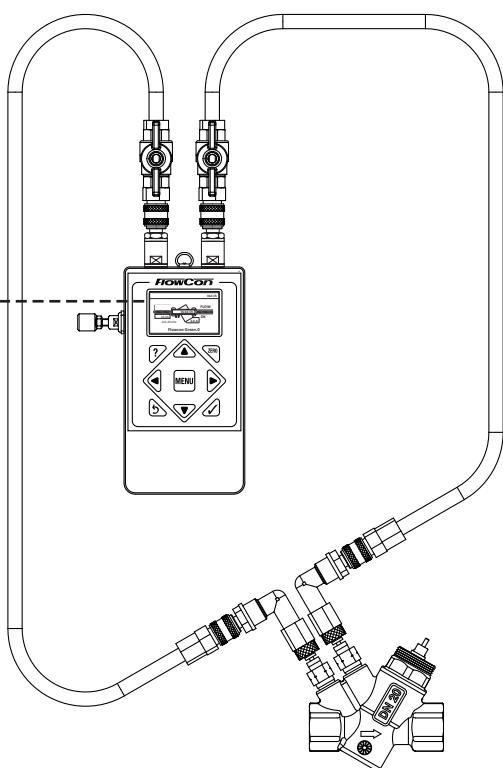

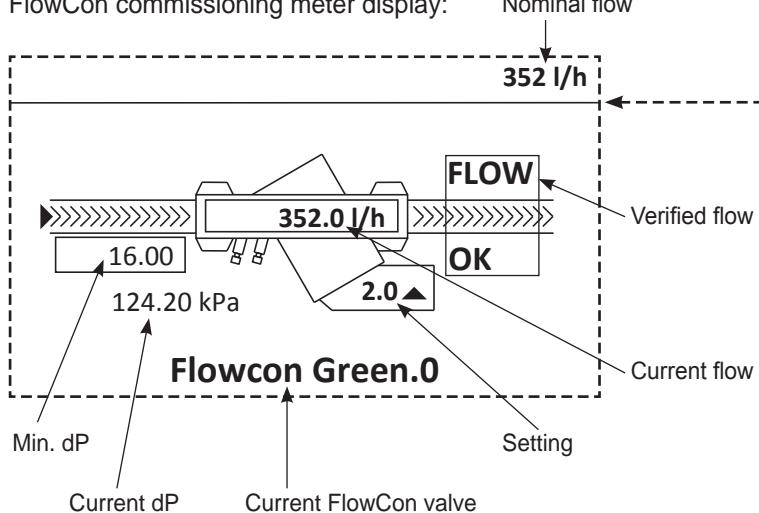

## APPLICATION EXAMPLE

FlowCon commissioning meter connected to a FlowCon AB-valve with pressure/temperature plugs and FlowCon Green insert, without actuator.

**Note:** Measurement only to be done either without actuator or with actuator fully open.

FlowCon commissioning meter display:
