## MINI CURRENT SWITCH CS-610-75

The CS -610-75 series current switch monitors line current for electrical loads such as pumps, conveyors, lighting, heaters or fans and closes the output contacts when the trip point is exceeded. The CS-610-75 has a trip point that is adjustable from 0.75 to 75 Amps by rotating the adjustment pot. A LED illuminates when trip point setting is reached.

The sensor requires no external power as it is totally powered by induction from the AC line being monitored. The switch output is normally open and when the input current exceeds the trip setpoint the switch closes to provide an on/off digital signal to the controller.
