DESCRIPTION

The **PreCon Model ST-U* Universal-Mount Thermistor and RTD Sensor** provides precision remote temperature sensing in multiple applications such as Duct, OSA, and Immersion installations for building automation systems. The active sensing element is a highly stable precision thermistor material or platinum RTD.

The sensing element is sealed with a thermally conductive compound in a 4-7/8" (12.38 cm) long stainless steel probe and is attached to a 2.5" (6.35 cm) square enclosure. The tabs on the enclosure provide mounting ears for direct duct mounting and are easily removable if they are not needed. This multipurpose enclosure minimizes the number of stock parts required to handle multiple applications.

PROBE APPLICATIONS

The **Duct Temperature** application is designed for direct mounting on sheet metal duct systems. The sensor is point sensitive and comes standard with a 4-7/8" (12.38 cm) insertion depth. The XL option is available for custom lengths up to 36" (91.44 cm).

The **Immersion Temperature** application is designed to be threaded directly into a 1/8" NPT well. The wells are available in brass or 304 stainless steel and are designed for pipe insertion using a 1/2" threaded saddle (Thredolet®).

The **Outside Air Temperature** application uses a wall bracket with a vented weather shield to minimize the effect of rain, snow, or other weather related influences. This rugged enclosure and bracket will ensure long life even in severe weather conditions.

MOUNTING

Duct: Drill a 9/16" (1.43 cm) hole for insertion into the duct. Attach probe snug to the duct with self tapping screws.

Well Insertion: Install the well into the customer-supplied 1/2" saddle (Thredolet®), then thread the sensor into the well. For better heat transfer you may apply thermal compound to the tip of the sensor before insertion. Mounting tabs may be removed.

OSA: Insert the shield into the bracket and thread the **KT-U*** through the gasket to the shield. Secure the assembly to the wall using the appropriate hardware for the wall surface. The ideal orientation of the sensor is horizontal with the knockout facing down and located on an outside wall with a shaded exposure. Mounting tabs may be removed. The sensor and shield may be painted to the architect's specifications.

Shaded Exposure
When choosing location for any outdoor air temperature sensors:
1. Do not mount above building openings (windows, doors)
2. Keep sensor out of direct sunlight

Do not mount sensor in vertical position with the weather shield pointing up.
